## Wreface.

In giving to the reading world thesc pages of the last Journal of one of the most popular writers of our day, no apology can be needed, and bat little explanation.

A word had better perhaps be said, and said here, as to my share in its composition. It is now trelse years ago since my friend-then Mrs. Brassey-asked my advice and assistance in arranging the Diary she had kept during the cleren months' cruise of the 'Sumbeam.' This assistance I gladly gare, and she and I morked together, chiefly at reducing the mass of information gathered during the royage. I often felt it hard to lase to do aray with interesting and amosing matter in order to reduce the book even to the size in which it appeared. It was a rery pleasant and easy task, and I think the only difference of opinion which erer arose between us was as to the intrinsic merit of the manuscript. No one could have been more diffident than the writer of those charming pages; and it needed all the encomagement which both I and her friend and pullisher, Mr. T. Norton Longman, could offer, to induce her to use many of the simple little details of her life, literally ' on the ocean ware.'

The success of the "Toyage of the "Sumbeam"' need not

Le dwelt on here ; it fully justified our opinion, surprising its writer more than any one else by its sudden and yet lasting popularity. Other works, also well received and well known to the public, lollowed during the next few years, with which I had nothing to do. This last Journal now comes before Lady Brassey's world-wide public, invested with a pathos and sadness all its own.

I renture to think that no one can read these pages without admiration and regret; admiration for the courage which sustained the writer amid the weakness of failing health, and regret that the story of a life so unselfish and so deroted to the welfare of others should have ended so soon.

On his return home, in December i887, from this last cruise, Lord Brassey placed in my hands his wife's journals and manuscript notes, linowing that they would be reverently and tenderly dealt with, and beliering that, on account of my previous experience with the "Toyage of the "Sunbeam,", I should understand better than any one else the writer's wishes.

My task has been a sad and in some respects a difficult one. Not only do I keenly miss the bright intelligence which on a former occasion made every obscure point clear to me directly, but the notes themselves are necessarily very fragmentary in places. It astonishes me that any diary at all shouk have been kept amid the enthusiasm which greeted the arrival and departure of the 'Sunbean' at every port, the hurry and confusion of constant travelling, and, saddest of all, the eridences of daily increasing wealness. Great also has been my admiration for the indomitable spririt which lifted the frail body above and beyond all considerations of self. I need not here call attention to Lady Brassey's devotion to the cause of suffering shown in her unceasing efforts to estaljlish Dranches of the St. John Ambulance Association all
over the world. It will be seen that the last words of the Joumal refer to this sulject, so near the writer's heart.

I have thought it best to allow the mere rough outhe diary of the first part of the Indian jouney to appear exactly as it stands, instead of attempting to enlarge it, which could have been done from Lord Brassey's notes. But, mhappily, the chief interest now of every word of this rolume will consist, not in any information conreyed-lor that could easily lee supplied from other sources-but in the fact of its being Lady Brassey's own impression jotted lastily down at the moment. After reaching Hyderabad there was more leisure and an interval of leetter health; conserpently each day's record is fuller. After August 2gth the brief jottings of the first Indian days are resumed, but I have not felt able to lay these notes before the prollic, for they are simple records of suffering and helpless weakness, too private and sacred for publication. They extend up to September ioth, only four days before the end.

No one but Lord Brassey could take up the story after that date, and it is therefore to his pen that we owe the succecding pages. All through the Journal I found constant references to what are called in the family the 'Sunhem Papers,' a journal kept by Lord Brassey and printed for private circulation. With his permission, I have arailed myself of these notes wherever I could do so, and I beticve that this is what Lady Brassey would hare wished. There were also, with the MSS., many interesting newspaper extracts referring to pullic utterances of Lord Brassey, but of these want of space compels me only to give three, specially alluded to by his wife, which will be foond in the Alpendix.

Lady Brassey had created an extraordinarily intimate and friendly feeling between herself and her readers all over the
world. It has been felt in accordance with this mutual and affectionate understanding to give little personal details, and cren a memoir compiled by Lord Brassey for his children during the sad days following the $14^{\text {th }}$ of September, to the friendly eyes which will read with regret the last Journal of me who has been their pleasant chronicler and chatty fellowtraveller for so long. It must always seem as if Lady Brassey wrote specially for those who did not enjoy her facilities for going alyout and sceing everything.

I must express my thanks to Lady Brassey's secretaries for the kind help they have afforded me, not only in deciphering MSS., lint in verifying dates and names of places.

M. A. BROOME.

## FOR MY CHILDREN.

## A BRIEF MEMOLR OF THEIR DEAR MOTHER.

'The greatest benefft which one friend can confer upon another is to guard, and excitr, and elecate his virtues. This your mother will still perform if you diligently meserve the memory of her life and of her death.
'There is something pleasing in the belief thet our separation from those whom te lore is only corporeal.
' Here is one expedient by which you may, in some degree, continue her presence. If you write down minutcly what you remenber of her from your earliest years, you will read it with great pleasure, and receive from it many hints of soothing recollections, when time shall remore her yet forther from you, and your grief shall be matured to vencration.'

> Di:. Johissoz.

My dear Children,-In sorrow and grief I have prepared a sketch of the life and character of your dearly loved mother, whom it has pleased God to call to Himself. Slight and innperfect as it is, it may hereafter help to preserve some tender recollections, which you would not willingly let die.

I shall begin with her childhood. Her mother having
died in her inlancy, for some years your dear mother lived, a solitary child, at her grandfather's honse at Clapham. Here she acmuired that love of the comntry, the farm, and the garden which she retained so leenly to the last. Here she learned to ride; and here, with little guidance from teachers, she had access to a large librarr, and picked up in a desultory way an extensive knowlelge of the best English, French, German, and Italian literature.

Alter a teen rears' residence at Claphan, your grandfather mored to Chapel Street, Grosvenor Place, and later to the house which rou remember in Charles Street. At this period your mother's education was conducted by her attached and faithtul gorerness, Miss Newton, wham you all know. She attended classes, hat otherwise her life must have been even more solitary in London than at Clapham. Her evenings were much deroted to Botany, and by assiduous application she acquired that thorough knowledge of the science which she found so useful later, in describing the profuse and raried regetation of the tropics.

And now I come to my chgagement to your mother. How swect it is to remember her as she was in those young days; in mamers so frank and maffected, and full of that buoyant spirit which to the end of her life never flagged. She enjoyed with a glad heart crery pheasure. She was happy at a ball, happy on her horse, happy on the grouse-moor, devoted to her tather, a favourite with all her relatives, and very, very sweet to me. Gladness of heart, thankfuness for every pleasure, a happy disposition to make the best of what Providence has ordered, were her characteristics.

We were married in October i 860 . After our marriage we had evervthing to create-our home, our society, our occupations. Te legan life at leauport; and wonderfully did sour dear mother adapt herself to wholly unanticipated circunstances. Beaport lecame a country home for our
nearest relations on both sides. As a girl, gom mother lad heen a most loving dangher to her own father. After hor marriage she was good and hime to my parents. To my hothers, matil they were ond enomgh form haply lomes of their own, slee was an affectionate sister.

At the date of our marriage, no nefinite career had opened ont for me. To fonlow my father's business was not considered expelient, and I had no commandinis political influence. In the endeavour to help, me to ontain a seat in Parliament, your dear mother displayed a troe wife-like derotion. She worked with an enerry and carmestness all her own, first at Birkenlead in 1861 , and later at Devomport and Sandwich-constitnencies which I fought masuccessfully -and my relum for Hastings in 1868 afforded her the more gratitication. It hat been the enstom in the last-mamed constituency to insile the active assistance of ladies, and especially the wives of the candidates, in canrassing the electors. Your mother readily responded to the call. She sron became jopulat among the supporiers of the Liberal party, and throughont my comection with Hastings she retained the golden opmions which she had so early won. Her nerve, high spirit, and alility, moder the fierce orleal of the petition agamst my retmon, have been descrihed in his memoirs hy Serjeant Ballantine, who conducted my case. He called your mother as his first witness for the delence, put one or two questions, and then lianled her wholly morepared to the comsel for the petitionersthe present Lord Chancellor. With moflincling fortitude rour mother endured a cross-examination lasting for uprards of an hour. Her ahmirable bearing mate a great impression upon the eminent judge (ILr. Justice Blackbum) who tried the case, and won the sympathies of the dense crowd of spectators. I remember how gratefully your mother acknowledged the merey of Hearen in that crisis of her life. 'I could not have done it mesess I had been helped,' were her simple words to me.

Down to the latest election in which I was engaged, your dear mother, in the same spirit of personal devotion to her husband, wronght and laboured in the political cause. I have put her lore for me as the prime motive for her efforts in politics; but she had too much intelligence not to lorm a judgment of her ormn on public issnes. Her sympathies were instinctively on the side of the people, in opposition to the oldfashioned Toryism, so much more in rogue a quarter of a century ago than it is to-clay.

In helping me to hold a seat in Parliament, your dear mother was inflicting upon herself a privation very hard to bear. Owing to the rapid changes in all the circumstances of our lives, it was difficult to preserve old associations. In the midst of new enrironments, to make her way alone was a great strain. It is some consolation to know what liappiness I gave when, upon my release from the urgent demands of Parliamentary and ofticial life, I was able to spend much of my time in her dear society. It is sad that this happy change should have come so late.

In addition to the share which she took in my Parliamentary labours, your mother undertook the exclusive management at home. This responsilility was gradually concentrater in her hands, owing to my long service in the House of Commons, combined with exceptionally heavy extra-Parliamentary work, finally culminating in my holding office at the Admiralty for more than five years.

How we shall miss her in everything ! specially in the task of arranging in the musem, now near completion, the combined collections of our many journeys! She had so looked forward to being able to bring together these collections in London; one of her objects being to afford instruction and recreation to the members of the Working Men's Clubs, to whom she proposed to give constant facilities of access to the collection.

The same spirit，which mate four dear mother my helf）－ meet in my pultie life，sustancel her，at the sandice of crery personal fredifection，in（constant（ompaniomship with her husband at sea．She bore the misery of sea－sickness without a murmur or comptaint．Fear in stom and tempest she never kinew．Sthe made pachting，notwithstanding its draw－ lacks，a solure of pleasure．At cowes she wats atways on deck， card in hand，to see the starts in the rarions matehes．At sea she enjosed the fair breezes，and took a deet interest in estimating the daity run，in which she was generadly wonder－ futty exact．She had a wreat facolty for seamanship，and knew as welt as anyboly on board what should be done and what was being done on dect．

The same eager simpathy with every interest and effort of mine led your dear mother to hetp me as Presidme of the Working Mens＇s（＇tul）and Institute Crinion．She attended the meetings，distributed the prizes，and on one occasion enter－ tained the members and their friends at Nommonhorst．Ef）－ wards of a thonsand came donton from London，and were adtressed by Lord Houghtom and ley M．Wiuldington，the French Ambessator．She atso did ath she could to encomage the Naval Artiftery Tolmuteers．For years she attended inspections and distributed prizes on board the＇President＇ and the＇Rambow．＇She was atways present at the amnal service in Westminster Abley．She witnessed the first embarkation in a gimboat at Sheerness．She carried throngh all the commissariat arrangements for the six hundred natat rolunteers who were brought together fiom London，Liverpont， and bristol for the great review at Windsor，sleeting moder canvas for three nights in our encampment，and lersonatly and most efficiently superintending every detail．The men were enthasiastic in their appreciation of her efforts．

The same interest was shown in my naval work．lour dear mother accompanied me frepuently in uny visits to the
dockyad towns at home and abroad, attended naval reviews, and was present at the manceurres on the coast of Ireland in I 885 , and in Milford Haren in 1886 . At home and abroad she ahways adided most cordially my desire to estahlish kindly rolations with the naval prolession, among whom she numlered, I am sure, not a few sincere friends. The same spirit ol' sympathy carried your mother with me on dreary and arduons journers to Ireland, where she paid several visits to the Lough Swilly estates. She called personally on every tenant, asked them to risit the 'Sunbeam, 'reated them most lindly, and won their hearts.

Her reception of the Colonial visitors to England last year, when suffering from severe illness, and the visits to the Colonies, which were the last acts of her life, are the most recent proofs which your dear mother was permitted to give of her gemuine sympathy with everything that was intended for the pullic good. The reception which she met with in Austratia affordel gratifying assurances of the wide appreciation of her high-minded exertions on the part of our Colonial friends.

The last day of comparative ease in your mother's lile was spent at Darnley Istand. Son remember the scene: the English missionaries, the native leacher with his congregation assemhled around him, the waring cocoa-mots, the picturesque luts on the beach, the deep hue sea, the glorions sunshine, the beauty and the peace. It was a combination after your mother's heart, which she greaty enjopel, resting tranyuilly under the trees, fanned by the refreshing trade-wind. Fom will remember her marked kindness of manner in giring encouragement to the missionaries in their work. It was another instance of her broad sympathies.

In attempting to give a description of your clear mother's fine character, I cannot omit her splendid courage. I have referred to it as shown on the sea. You who have followed her with the hounds, as long as she had strength to sit in the saddle,
will never forset lrex phati ant skill．Her courage never faibled her．It mphelid her undamoted through many illnesses．

And now I turn to that part of the work of her life by which vour dear mother is hest known to the onter world． Her books were widely rat by Fnoblish－speaking people，and have been translated into the lansuage of nemperery civilised mation．I＇he books orew ont of a labit，early adopted when on her travels，of sitting up in ber as soon as she amole in the morning，in her dressins－jacket，and writing with pencil and faper an mpretemding narative of the previons day＇s pro－ ceedings，to he sent home to her father．The written letter grew into the lithographed，jommal，and the latter into the printed book，at first prepared for private cironlation，and finally，on completion of om voyase round the world，for publication．The farmarable recention of the first luok was wholly mexpected by the writer．She awoke and fomd her－ self l＇amous．

Her popularity as a writer has been mon by means the simplest，the purest，and mont hatural which can be com－ ceiver．Not a single mbind or murenerons thomoht is to be fromed in any book of hers．The inintraction and knowledge （on reyed，if not frofomm，are usefal and interesting to readers of all classes．The chorice of togies is always judicions．A bright and hapy pirit whos in her pases，and it is this whicels mathes the looks attractive to all classes．They were reat with pleasure by Prince Bismarck，as le smoked his ermanes pipe，as well as by girls at school．Letters of acknowledennent used to reach yom mother from the bedsirle of the aged and the sick，from the prairies of Anerica，the backwoods of C＇anada，and the lonely sheep－stations of Australia．Those wrateful letters were the most ralned which were reeeived from the cottages of the poor．As old George Herbert sings，

[^0]It was natural that your mother, with her eager mature, should be spurred on to renewed efforts ly success. She set out on her last journer full of hope and enterprise. In India, in Bornco, in Australia, she was resolved to leave no phace monsisted which could by any possibility be reached, and where she was led to believe that objects of interest conld be found, to be described to readers who could not share her opportunities of travel. The enlargement of our programme of journeys within the tropics threw a heary strain on her constitution. In Northern India her health was better than it had been lor rears, but she fell away after leaving Bombay. Rangoon and Borneo told upon her. She did not hecome really ill until the day after learing Borneo, when she was attacked by the malarial fever which infests the river up which she had travelled to the famous bird's-nest caves. She suffered mach until we reached the temperate climate of South Australia.

On leaving Brishane we fomd ourselves once more in the tropics. Enfeebled bey an attack of lronchitis canght at Brisbane. your mother was again seiged with malarial ferer. On the northern coast of Anstralia such fevers are prevalent, ant one risits to lioclhampton, the Herbert Piver, Mourilyan, and Thursday Island, where we were detained ten days, were probably far from heneficial. No exil conseruence was, however, anticipated; and withont undne self-reproach we must bow with summission to the heary hlow which, in the ordering of Providence, has befallen us.

Your dear mother died on the moming of September 14 , 1SS7, and her remains were committed to the deep at sumset on the same day (Lat. $15^{\circ} 50^{\prime} \mathrm{S}$., Long. $110^{\circ} 35^{\prime} \mathrm{E}$.) Every member of the ship's company was present to pay the last tribate of love and respect on that sad occasion. Four dear mother died in an effent to carry forward the work which, as she believed, it had pleased Gorl to assign to her.

From your mother's books let us turu to her charities; and first her pullic charities. Fon know how the has laboured in the canse of the St. Johm Ambalance Association, how she has taken every opportunity of urging forward the work in every place which we visited, in the West Inclies, in the Shetlamls, in London, at Midlleshrongh, in Sussex. At all the ports at which we tonched on our last cuise she spared no pains to interest people in the work. You heard her deliver her last appeal in the cause at Rockhampton. She spoke under extreme physical difficulty, lout with melting pathos. As it was her last speech, so, perliaps, it was her hest.

Your mother took up ambulance work at a time when it was little in fashion, because she believed it to be a good cause. By years of hard work, in speech, in letter, ly interviets, ly pamphlet, by personal example and devotion, she spread to multitudes the linowledge of the art of ministering first-aid to the impured. The may rest assured that her exertions lave been, under Providence, the means of saring many precions lives. In her last cruise pou have seen how, when painful injuries have been received, she has been the first to stameln the lleeding wound, facing hrying scencs with a comage which never faltered while there was need for it, hut which, as the reaction which followed too surely told, put a severe strain upon her feeble frame.

Many could tell, in terms of deepest gratitude, what a true angel from hearen your dear mother had leeen to them in their hours of sickness. You will readily recall some of the most striking occasions.

That your mother accomplished what she tid is the more to be admired when account is taken of the feeble condition of her health and of her many serions ilhesses. She inherited weakness of the chest from lier mother, who died of decline in early life. When on the point of first going out into society, she was fearfully burned, and lay for six months mrapped in
cotton-wonl, mable to feed herself. In the early years of our married life we were irequently driven away in the winter to seek a cure for severe attacks of mronchitis. In 1869 your mother canght a malarial ferer while passing through the Suez Cimal. She rode through Syria in terrible suffering. There was a tumporary rally, followed ly a relapse, at Alexamdria. From Alexandria we went to Marta, where she remained for wecks in imminent danger. She never fully recovered from this, the first of her severe illnesses, and in i 880 she had a recurrence of ferer at Algicis. It was followed by other similar attacks-at Cowes in 1882, in the West Indies in 1883, at Gibraltar in 1886, and on her last voyage, first ut liomeo, and finally, and with the results we so litterly lament, on the coast of Northern Queensland. Only indomitable courage could have carried your mother through so much ilhess and left her mental enorgies wholly mimprired, long after her physical frame had becomo permanently enfeebled. Luss of health compelled her to withdraw in great measure from general societr. She was unequal to the demands of London life, and from the same cause was unable to remain in England during the winter. Thus she gradually lost touch of relatives and friends of furmer years, for whom she lad a gemuine regarl. Th such society as slie was able to see at the close of her too short life, she never failed to win regard and sympathy. There will be many sad hearts in Anstralia when the tidings of your mother's death reaches the latest friends whom she was privilegen to win.

The truest testimony to your mother's worth is to lee fom in the painful roid created in the home circle by her death. For me the loss must be irreparable. It would, indeed, lee more than we could bear, if we had no hope for the future. We cling to that hope; and whatever our hand findeth to do, rie must, like her, try to do it with all our might.

Such then was your dear mother: a constant worker,
workins it may be berond her strength, vet arending to the light which (tod hat given her, and in the mollest camses. Lour mother was always doing good to thonse from whom she had no hope to receice. She did mot do her alms before men: not those at least which cost her most in time and in thousht. When she paryed, she entered int" lree closet and shat the dwor, and, withont rain repetition, pesented her hearlis desire in language most simple before the Father in Heaven. Her life was passed in the spirit of the Apostle's exhortation: '] 'e ve kind one to another, tenter-hented, forgiving une another:"

In the last prayer which she was able to articulate with me, your mother lesonght the hlessing of Ataren upon us hoth, praving that she might pet be sparent to be a comfort to me and all around her. In that prayer was emboried the central aim of her existence. Her praise to forl was sung in her work of practical gond. Her pratm was the generous sacrifice of self to works which she believed would he for the adrantage of "thers. This thonghtfulness wat shown in the most beantiful way, when the last sat call hat come. When, in reply to her tonchimg inquirs, "Is it quite hopeless"? the answer gave no encouracement to houe. yon will not forsot the temdemess, the mafaltering fortitule, with which she bestowed her blessing, and then procerder, matil artionlation was denied, to distribute to each some token of her tender love. She died in perfect charity with all, streetly sulmissive to the Divine Winl, and consoling her afticterl huspad amd chiken to the very last.

Your mother's heart was as large as it was tenter. She was deroterl, as a wife, to her hustant; as a mother, to her children. She was lind to dependents, ever thoughtinu for the poor. and there was a large place in her heart for her dumb companions. Her presence will. I am sure, never fade from your recollection ; and in all my remembrance of her I can recall no period of her life when her face was so dear to
look upon as in the days after learing Port Darwin. As she lay back on her pillorss, a veil of white lace thrown round her head, her eyes so lright, her smiles so loring, not a mumur from her lips nor a shade of mest on her serene comtenance, the peculiar sweetness of her expression seemed a foretaste of the peace of hearen.

I do not recall these things solely as a tribute to the dear one who has passed away from among us, but for your protit and for mine. The have scen how your mother used her opportunities to make the world a little leetter than she found it. We may each do the same service in our own sphere, and so may best be followers of her good example. In tenderest love may we ever cherish and bless and revere her memory.

My dear children, I might write more. I could never tell you what your mother was to me.

Your very affectionate father,
Brassey.
-Suxbend,' R.Y.S.: Scptember $18 \$ 7$.

WHEN the arrangements for a contemplated cruise to the East were being considered, towards the end of ISS6, it was thought best for Lady Brassey and her daughters to make the royage to Bombay in a P. \& O. steamer. The 'Sunbeam' herself was to sail from Portsmouth by the middle of Norember. Lord Brassey, in the first paragraph of his 'Smbeam Papers,' thus acknowledges the help he derived at starting, in what may le called the domestic department of the yacht, from Larly Brassey's presence on board for even a tew hours.

- We embarked at Portsmouth on Monday, NoremJer i6th. The "Smbeam" was in hopeless contusion, and it required no ordinary effort of determination and organisation to clear out of harbour on the following day. A few hours at South-
ampton did wonders in evolving order out of chaos. On the afternoon of November 1 Sth, my wife and eldest danghter, who had come down to help in preparing for sea, returned to the shore, and the "Sunbeam" proceeded immediately down Channel.'

At Plymonth Lord Brassey was joined by the late Lord Dalhousie and by Mr. Arnold Morley, M.P. The former landed at Gibraltar, and the latter at Algiers. Through the long royage to Bombay the gallant little yacht held stoutly on her course, meeting first a mistral in the Mediterramean, then strong head-winds in the Red Sea, and haring the N.E. monsoon in lier teetla after learing Aden.

In the meantime Lady Brassey, her three danghters, and some friends left England a few days after the yacht had sailed, travelling slowly, with many interesting stopping-

Fortsmonth. H.II.S. 'Hercules
places, and not finally reaching Brindisi until December inth. Thence to Egypt was but a brief voyage, and the one day's

Cairo, where much hospital-visiting was again got throngh, and many interviers respecting the site for the new hospital at Port Said were held with the Egyptian authorities. This pleasant but by no means idle dawdling lrought the party to Suez on December 23rd, where they embarked at once on board the P. \& O. steamer 'Thames,' Captain Seaton, and started at midnight for Bombar.

Carefully and well had the plans for both royages been laid, and successfully-by grace of wind and weather-had they been carried out. On Jannary 3rd, i887, Lord Brassey in the 'Sumbeam' and Lady Brassey in the 'Thames' exchanged cordial signals of greeting off the harbour of Bombay. The incident must be briefly described from the earlier 'Sunbeam Papers' (for of this first portion of the cruise Lady Brassey has umhappily left no notes). 'As we were becalmed off Bombay, waiting for the sea breeze which invariably freshens towards noon, the Peninsular and Oriental Company's steamship' "Thames," with my wife and children on board, passed ahead of us into the harlour. We had a delightful meeting in the afternoon at Government House, Malabar Point, where we were greeted with a most cordial welcome from our dear friends Lord and Lady Reay.'

We are so accustomed nowadays to the punctual keeping of appointments made months belore, with half the width of the world between the meeting-places, that this happy and fortunate coincidence will scarcely excite remark, even when the home journal dwells on the added joy of the arrival, that very same evering, as plamned beforehand, of Lord Brassey's son, who had started earliest, and harl been spending some weeks of travel, sight-seeing, and sport, pleasantly combined, in Ceylon and Sonthern India.

The punctuality of the $P . \& O$. steamers might be a proverb, if in these hurried days anyone ever paused to make a proverb; and therefore it is not the rapid run of the
'Thames' which excites our admiration. It is rather the capital sailing qualities, well tried and proven as they are, of the 'Sumbeam.' Though essentially a satiling vessel aur carrying very little coal,

Kumachee Habbour the yacht had made her way through the infricate navigation of the Red Sea and against the strong contrary winds of the N.E. monsoon, which blew with quite exceptional force off the southern shores of Aralia, and had tinally dropped anchor at the afpointed day, and almost hour, in Pombay Harbow.

On this, her first visit, the 'Sunbeam' remained only three days at Bombay. She sailed again for Kurrachee on January 6th, i887, and reached her destination early on Tuesday, the irth. The stay in Bombay was cut short by the desire of the travellers to join Lord and Lady Reay, and joumer with them for the first few days of an official tour in Sincll, on which the Goveruor of Bombay was about to start. There are exceptional opportunities in such an excursion for seeing great concourses of natives, and gaining knowledge of the condition of the country from

The IIito Fibloner the officials engaged in its administration. The first point of interest noted is a native horse-fair held at Shikarpur, where 'in the immense concourse gathered together, all the races of these wild districts

Bokhara Ifan
were represented. The most characteristic people were the Beloochees-men of sturdy huild, who carry themselves with a bold and manly air. 'Ihey formerly lived by raids and cattle-lifting, swooping down from the Suleiman Mountains upon the people of the plains, who were seldom able to offer any effectual resistance. We have established order in these once lawless regions by our military force, posted at Jacolabad.'

From the lirief notes of this earlier part of the journey, which follow, it is evident that the travellers had semi-official receptions of their own at nearly every large station. Addresses of cordial welcome were presented ; replies had to be made; and it is perhaps from these causes of added fatigue and excitement that Lady Brassey was mable to do more than jot down the erents of each day.

Lord and Lady Brassey and their family travelled together through Sindh, along the northwest frontier of India to Lahore, Peshawne, and the Khyber Pass ; and Lord Brassey gratefully notes in the first number
 of 'Sunbeam Papers' that his
wife's health in Northern India was hetter than it had been for years.

A fresh start on the retmon jommey to Bombay was made from Lahore on Jannary 2 sst, rifi Patiala, whose Maharajah, young as he is, carries on the practice of smptanas welcome and entertainment of English travellers which forms part of the historic traditions of the loyal rulers of the state. Agra was

Our Howe on Theels
reached on Jannary 30 th, and at this point, after a hrief delay, the party separated, Lord Brassey retracing his steps to Kurrachee to take the yacht back to Bombay. The rest came romed by Cawnpore and Lucknow, Benares, Juhbulpore. and Poonah, and so on to Hyderabad, their farthest inland point, where Lady Brassey's more elahorated diary commences.

The whole of this long journey of 4,500 miles was made
in thirty-six days, and with the exception of the two nights at the Maharajah's pralace at Patiala, the railway train was the only sleeping-place of the travellers, who were eleven in number. Halts and stoppages were made in the daytime to admit of local sight-seeing and excursions. Lady Brassey, in a private letter, declared this plan of travel to be delightful and thoronghly comfortahle ; and it will le seen that Hyderabad was reached not only with comfort but with renovated health, and with the full enthusiasm of travel and ardour of enjoyment strong in the breast of the well-known diarist, whose last joumals, faithfully kept when once commenced, are now before us.

## J OURNAL.

## CHAPTER I.

## EOMBAF TO JUBEULPORE.

Thurstay, Itmuary 6th.-Left Bombay harbour at 2 A. м. and proceeded to sea under steam. Rather rolly. Tery busy all day mpacking and arranging things. As nearly everybody was more or less overcome, I felt that I must make an effort. Small party at meals. State of things improved towards evening.

Friday, Jamuary 7 th. -On deck at 5 A.m. Shifty breeze.

Tacking all day. Busy mpacking and repacking, and trying to get things straight. Towards evening the invalids began to pick up, a little and to appear on deck.

At noon we were off Terawal, haring run I 35 miles since yesterday. Distance from Kiurachee, 310 miles.

Suturday, Jenuury 8th.-On deck at 5 A.mr. Pleasant breeze, but not favourable. Several dhows in sight near the land. At eight o'clock a dead calm and very loot. At noon a sea-breeze, fair ; at five o'clock a land-breeze, fonl. Steam up at a prom.

Sumtay, Jemumy gth.-A flat calm at 4.30 A.m. The 'Southern Cross' and 'Great Bear' bright in the heavens. The moon set with curions ' horse's-tail' effects. At noon we were off Kori, or Lalihpat. At 10 p.a. heary squall from N.E. came on, accompanied loy a downpour of rain.

Monday, Jumury 10th. - Mate Kurrachee Light soon after midnight. Entered the harbour at daybreak. Tery cold on deck. Soon after we had anchored, Mr. Dashtar, one of the Parsee cricketers, came on looard with bouquets of flowers for all of us. After mach settling, and packing, and engaging new

servants, tre breakfasted ; and then, haring landed, proceeded to see something of Kurachee City, the alligator-tank, and the cantonment. Engaged additional horses for a louger

Tucsday, Jemutry it th.-Blue glass in carriage windows made the landscape look as if covered with snow. Stopped for baths and refreshments at one of the stations en route. Breakfasted later in train. Passed through a dreary country, a saltpetre desert, relieved by occasional scrubby trees. Interesting people at wayside stations - Sindhis, Beloochees, Afghans, Persians, and others.

Reached Shikarpur at two o'clock.
Met by Colonel Mayhew, Mr. Ralli, and Colonel Lyttelton. Drove to Commissioner's residence. Colonel Mayhew took us to the fair, and

## to see

the wrestling ; then to the bazaars. Wonderful concourse of people. Bought carpets and silks. Entertained friends at tea 'on looard' train. Dined with Mr. Erskine.
Wedmestry!, Jomuary I2th.-Very wet night. Brealifasted early. Drove to the Residency, where the fires were most acceptable. Lady Reay's room partly washed away in night, being in what is appropriately called a melting-house. To the camp of the Amir, a courteons old man with fire sons. A scene to be remembered. Saw
tighting-rams, cocks, and partridges. Lunched at station, where we met 'rom and chitdren. Afterwarts to the great Shikarpur horse-fair and prize-giving. Interesting sight, but bitterly cold air.

Thursdu!, Jomumy $13^{1 / h}$.-Amir sent seven camets, beantifulty caparisoned, to take us to his camp. Inove through bazaars. Most gracionsly received at camp, but luckily escaped refreshment. Thence to the Commissioner's house. Deputation of judges of show and principal Sindhi, Hindoo, Mahomedan, and other inhabitants, bringing fruit, flowers, and sweetmeats. Left at twetre o'clock in Governor's train for Sukhur Bridge. Proceeded in steamer mp the Indus past Rohri. Town gaity decorated. Saw canat and irrigation works. Hard work going up stream, easy coming down again, as is often the case. It is said that a royage of ten days in one direction often occupies three weeks in the other. Strolled through toma of Sukhur: Picturesque illuminations in the evening. Returned to our yacht on wheels at tem o'clock, thoronghty tired.

Fridu!y, January 1 \& thi-C Called at seven. Very cold. Breakfasted with the Brackenburys. Good-bye to our dear Bombay friends. Drove round the town, and then witl Tom and Tab to Old Sukhur and the bazaars. The Governor and Lady Reay left at noon for Sindh. We proceeded by water
 to Rohri. Train crosses the river in boats; picturesque scene-camels, boats, train, volunteers, and natives. Much ptagued by tlies. Telegraphed for dimner at the station at Ritti. Very cold night indeed. Conld not sleep after two o'clock. Wrater froze in bottles.

Suturday, Jamurry i 5th.-Crossed Empress Bridge over Sutlej. Reached Mooltan at 6 a.m. Brealifasted at nine.

Mohamed Hyat Khau, district judge, very kindly offered us his services as guide. He had been much with Lord Lawrence, carried Nicholson from field of battle when the latter was wounderl, and killed the man who slew him. Called on Colonel Barnes. Old fort, dark blue and light green tiles. To the bazaars. Enamelled jewellery and brass foot-pans. Returued to the train, wrote letters, and settled plans. Visited the church with Mr. Bridge (consin of our old friend Captain Cyprian Bridge, R.N.), the chaplain here. Tea at the club, which resembles other clubs all the world over. Back to station, where deputation of chiefs came to see Mande Lawrence. Left Mooltan at 7.50 р.м.

Sumlu!!, Janum? 16th.-Shortly before eight o'clock we passed a large cantomment, and som afterwards caught sight of the tombs and temples of Lahore. Train shonted into siding. Found letters innumerable awaiting us. Went to

Mr. K.'s church, and afterwards in camel-carriage to Suttan Serai. Polo ponies, horses, and wild-tooking peopłe. Negro ponies with curly hair.

Monday, Jomuary i 7 th.-Called early. Breakfast at eight. In gharries and camel-carriage to Government House. Thence to the jail, where we saw the process of carpetmaking ; and afterwards to the School of Art. 'Sir Roger' suddenly disappeared, to my consternation, but was discovered, after much search, wandering about near the jail. To the Zoological Gardens; nothing speciafly worthy of notice except a fierce tiger. Then to the Lawrence Haft, where balls and concerts take place.

In the aftemoon we rode on elephants, guided hy mahouts in red and yellow uniforms, and attended by servants in liveries of the same colour, to the bazaars. Contents most

Eunjeet Siagha Tomb, Lahore
interesting, especially the carred woodwork, copper-work, and Persian armour. Went to Golden Mosque and Fort, the

palace, elephant-pool, and Runjeet Singh’s tomb. Wonderful sight. Great fin bargaining. Shops each more curions than the others. Returned to station and resumed journey for Peshawn.

Tursiduy, January 187h.-Reached Lawnl Pindi, where there is a large cantomment. The riews of the Indus are fine in places, but the railway on the whole passes through a barren desolate country until Peshawur is approached, when the soil becomes more cultivated.

On arrival at Peshawur Station we procured gharries and drove rapidly to the house of the Commissioner, Colonel Waterfield, who was most kind. Then in a dog-cart and three gharries to the bazaar; rery quaint and picturesque. Fine view of the Khyber Pass and the Himalayas from top of police office. Drove to the King's Garden, which is well laid out and contains many fine trees. The Christian church at

Peshawur contains many memorial tahlets to missionaries. Colonel Waterfield dined with as in the train, and told us
 Carally and Skimer's Horso exercising under Colonel Chapman. Inspected portion of the force of 650 infintry and 50 cavalry maintained for the
protection of travellers throngh the Khyber. Tnesday and Friday are the cararan days each week. Strong escort for

.
$x=0$ =
Jamrud Fort
caravans necessary, owing to intermittent fighting between tribes on either side of pass.

Thursduy, Jumury 2oth.-Arrived before daylight at Rawnl

Pindi. Woke very early and wrote letters. General Dillon came to greet ins. Drove out to the parade-ground. Passed

troops on way to be reviewed. The strength on parade included i 5 th Bengal (Mooltan) Cavahry, iSth Bengal Lancers (Punjaun), Momntain Battery, and the 1fth Bengal Infintry (Silihs). The whole force marched past in splendid style, quite equal to any but the Guards, and then the cavalry went by at a gallop. Momnted gun, carried on five mules, unlimbered in sixty, limbered in sixty-fire seconds. Thukkar quoit-
 throwing extraordinarr, the quoits looking like fyying-fish darting hither and thither. Also tent-pegging, with and without saddles-mhaking rupee off without touching peg, digging peg out of the ground, changing horses at full gallop,

Lahcre and hanning on in every conceivable attitude. Lunclied at the residence of the General. Inspected native and Britisle hospitals, huts, tents, and re-creation-rooms. Then back to station, where we entertained friends to tea. Resumed journey at S. 20 p.m. All very tired.

Friday, Jutultr?! 2rst. - Saw minarets of the Shah Dura. Arrived at Lahore two homss and forty

minutes late. Drove to Shalh Dura in camel-carriage, over Ravee River by bridge of boats. Stream nearly dry. Inlaid marble tomb very beautiful, but surroundings disappointing and much damaged. Saw the elephants being washed in the river. It was most amusing to see how monderfully they were managed by quite tiny boys. Alter lanch we went to the Museum, which has

only recently been opened. Thence to the bazaar and the Lawrence and Montgomery Halls, and afterwards to Mr. Elsmie's native party, where we met many interesting people. Dined with the Elsmies, and met Colonel Wolseley, Lord Wolseley's lirother.

Suturday, Jomutry 22md.-Left Lahore at 5 A.MI, ant reached Amritsar at seren. Noticed encampment and cara-

Patiala
ran of camels just before arriving. Drove with Mri. Mitchell through the picturesque city to the Golden Temple, with its gilded domes, minarets, and lamps, its marble terraces, and its fine garden. This temple is the head!uarters of the Silik religion. Beantiful view of the Himalayas from roof. In the public garden, called the liambagh, people were playing lawn-temis. Left Amritsar at 8 r.m.

Sunday, January $23 \cdot d$-At 5 a.m. reachel Rajpura, and were received by a deputation of officials. Tea and fruit awaited us in the dâk bungalow, not a hundred yards from the station, to enable us to reach which five

carriages had been provided. At $S$ a.m. we reached Patiala, where carriages and lour, twenty elephants with howdahs, and an escort of thirty horsemen, were drawn up
in readiness for us. At one o'clock we drove to the Bari Durri, or Palace of the Maharajah of Patiala, a dignified boy of fourteen, who received us most courteously. Drore through the city to another palace called Moti Bagh, which had been placel at our disposal, and where the Maharajal returned our visit.

Monday, January 24th.-The gentlemen went out shooting early. Started at 11.30 in carriages drawn ly forr horses, and drove through scrub-like jmgle to meet the shooting party. Rode on elephants, in rather tumble-to-pieces howdahs. Saw

The Kutub IVizar
many black and grey partridges, quail, deer, and jungle-fowl, but could not shoot any on account of the mostealiness of the howdahs. Grand durbar at the Maharajah's palace in the evening. Four thousand candles in glass chandeliers.

Tursilay, Janmary 25 fl.--We were honoured early this
morning with a visit from the three members of the council of regency. Sir Dera Sing, the president, is a man of distinguished presence and graceful manners. In the course of conversation we endearoured to elicit his views on several points. Tom questioned him as to the relations between the Government of India and the native states, and told me that

Base of the Eutub lLinar
he said, speaking for Patiala, and indeed for the native states generally, there were no grievances of which they could complain. Patiala sent a contingent to the last Afghan campaign. Sir Deva Sing, referring to our policy in Afghanistan, thought it would be wise to advance the frontier to the further limits of Afghanistan. He advocated this step solely on the grounds of prestige. Turning to the condition of the native

army, he thought it desirable to improve the position of native officers in the British service. They are not dissatisfied with the actual conditions; they are prepared to fight to the last in support of England ; but they would appreciate any step which could be taken to put them on a level with British officers.

A risit to Patiala suggests some general reflections. Under native rule, roads, samitation, education, everything which belongs to the higher civilisation, is neglected, while money is larishly spent on elephants, equipages, menageries, jewellery, palaces, and barbaric splendours of erery kind. It is a great abuse, muclı needing correction, that the native states, though they have received from the British complete guarantees against foreign invasion and internal rehellion, maintain armed men, for the ranity of military display, to the number of 315,000 .

It would have lightened our burdens greatly if the internal government of India could have been left under native princes. Such an alternative, unfortunately, was not open to us. The native rulers wonld have proved for the most part incapable of the task. They would have been led on by internecine warfare to mutual destruction.
 The trade with England depends on the peace which we have been instrumental in preserving.

The gentlemen went out shooting, and we joined them at lunch as before. Paid some risits in the afternoon, and played lawntemnis at the Bari Durri with the Maharajab. Left Patiala at 8 р.м.

Werluesday, Jamuary 26th.-Arrived at Meerut at 5 A.m., and thence continued our journey to Delhi. Drove to dâk bungalow, and thence to the palace, now being partially restored. Public andience-hall, Pearl Mosque, and the entire group of buildings within the fort at Delhi, are noble examples of Indian architecture. Lunched at United Service Hotel, in the garden of which is the tomb of the Emperor Hamayun.
Thursduy, Junuary 27th.-Drove out early to the Ridge, the flag-staff battery, and the big durbar tent. Saw the troops march by, and at rifle practice. After breakfast went with Mr. Camon to the Kutub Minar, the grandest column in the rorld ; climbed to the top, whence there is a splendid

riew. Spent the rest of the day in seeing the sights of this wonderful city. Dined at dik bungalow, and returned to train. Started at 10.48 for Ulwar.

Fridny, Jtmmary 28th.-Arrived at Clwar at 7 A.m. Messenger from Maharajah to act as our suide. Most lovely palace, not generally slromn. Exquisite lace-like marlle tracery, especially in Zenana rooms. Both the Maharatah and the Naharanee are at present away. Schimnahal Tank at back, with cupolas, too beautiful for words. We also went to the summer palace and the gardens attached to it, in which, among other things, we saw some schoolboys playing cricket. Both at Ulwar and at Jeypore there are hospitals and medical schools for male and female students.

Suturday, Jumury 29th.-Reached Jeypore at 6 am. The Maharajalı's secretary and his assistant, Ioth dressed in
hack, came to meet us at seren oclock. Drove to Amber, the ancient city of the Rajpoots, now ahmost minhalited, except by Fatirs. Lovely drive in the cool morning air. Elephants at foot of hill, and alligators in tank. At the temple a lid is sacrificed every morning, of which fact we saw traces. Tisited the palace - an extensive and gorgeous building, with fine specimens of carved marble. Magnificent riew from roof. Drove back to Jerpore to breakfast, and found men with specimens of arms, and curiosities of all hinds, awaiting us. Tisited School of Art and Mnsemm. Lunched at excellent Kaisar-i-Hind hotel. Then to the palace, which contains endless courts and halls-of-audience, including the celehrated Dewani Khas, of white marhle. Ascended to serenth story, by special permission. Extensive view over city. Interview with Maharajah. Saw his stables, trained

Sar-Bakr, Grealior

horses, and fighting animals, and the beautiful Ram Newas Gardens.

Simmey, Jamm!! zoth-Arrived at Agra. Went to church and heard a goot sermon. Drore to the Taj, "the glory of the world,' which was not in the least disappunting, high as were our expectations. I lined with Colonel Smith.

Mombly, Jammriy 3ist.—Drove out to Futtehpore Sikri, the farourite residence of the Emperor Alibar, about twentyfive miles from Agra, where there is a lovely tomb, finer than any we have yet seen. German photographer taking views of it. Linched near the Jain Temple, which contains most curions carvings. Tom says it is remarkahle how well some British regiments stand the climate of Tulia. At Agra we saw the Manchester Regiment. Atter three years at Mooltan, perhaps the hottest station in India, the men were in rule health. They marched the whole distance to Agra. At the time of our risit the men were playing footlall and cricket, as vigorously as it they were in England. They subscribe for nowspapers; they amuse themselves with trequent theatricals. They are tit to go anywhere and do anything.

The prison at Agra is admirably administered. Under the direction of Dr. Tyler, the men are being instructed in trades, by which, when released from confinement, they will be able to earn an honest living. The manufacture of carpets in the prison has been brought to perfection. A similar progress has been made in wood-carving in the prison at Lahore. Throughout India the prisons have been converted, with a wise humanity, into husy workshops.

Tuesiley, Frbucty ist.-Left Agra by special train at 3 A.m. and reached Gwalior at seren. Colonel Bannerman, with carriages, kindly met us. After hreakfast drove out to the fort, to reach which we had to ride on rery shaky elephants up a steep road. Barracks deserted now that the English soldiers are gone. Saw the Jain Temple, restored by Captain Keith. Returned to Gwalior, and lunched at the Residency. Proceeded by I .45 train to Dholepore. Maharajah received us at station and entertained us with coffee. Reached Agra again at six o'clock.

Werlnesday, $\mathrm{F}^{\prime}$ Thutry 2 ml. - Arrived at Cawnpore at 2 A.m. Drove at 6.45 through the streets to the Memorial Gardens, where a montment is erected orer the well into which so many rictims of the Mutiny were cast. Visited the site of the Assembly Rooms,
where women and children were hatked to death. Then to General Wheeler's entrenchment, St. John's Church, and the present Memorial Church, which contains many interesting tablets with touching inseriptions. Proceeded ly train to Lucknow. Went with General Palmer to the Residency. Lorely gardens, fult of purpte bougaincittea, orange bignonia,

Nerbudaa Fiver, ILarble Rock:
and scarlet poinsettias. It was difficult to realise that this spot had once been the scene of so much horror and boodshed. It was in the gardens of the Secumdra Bagh that two
 thousand mutineers were killed within two hours by the 93 r d Regiment and the 4 th Punjaut, Pifles, under Sir Colin Campleetl. Lunched at the Imperiat Hotel, and afterwards went to the soldiers' coffee-tarem.

Thurseluy, Fedrum! 3 rol. - Reached Camprore at michnight, and Allathathad at 7.20 d.an. Met by Mr. Atam with the Maharajaliss carriages, in which we drove to the principal places of interest, including the fort, the arsenal, and the Sultan's serai and gardens. Returned to station and went on by train to Benares. Drove through the narrow and dirty

Temple at Ellor:
street.s to the Golden Temple. Not much to be seen in the shops except London lrasswork and Hindoo gods. The Temple was chiefly remarkable for the dirt which abounded. The Cow Temple was dirtier still, with cows and holls tied up all round it. Monkey Temple rery curious. Drove out to the cantomments, sereral miles from the eity. Dined at Clarke's Hotel, and returned to the train rery tired.

Friduy, February $4^{\text {th }}$ - Called at 6 ans. Started at halfpast seren for the Ranagar Palace, where we found chairs in readiness to carry us up the ascent. Received by the old Maharajah, his son, and grandson. Embarked in a boat propelled $\mathrm{l}_{\mathrm{y}}$ a treadmill, and proceeded down the river, past all the ghauts and palaces belonging to various kings and princes or to their descendants. The bathing-ghant was a wonderful sight. Women in brilliant colours: red palanquins and pilgrims. Carriages met us at the bridge.

During the succeeding days the joumey included visits to the Marble Rocks, near Jubbulpore, and to the Caves of Ellora, riê Aurungabad.

## CHAPTER II.

```
HYDERABAD AND POONA.
```

WE arrived at Hyderabad at half-past eleven on February gth, and found Major Gilchrist (military secretary to the Resident, Mr. Cordery) waiting with the Nizam's carriages to take us to the Residency. It is an imposing lonilding with a flight of twenty-two granite steps, a colossal sphinx standing on either hand, leading to the portico through which you reach the spacious reception and dining rooms, whilst the comfortably furnished sleeping-apartments lie beyonl. An
entire wing bad leen appropriated to the ladics of our party ; and, luxurions as our milway-cas hand heen, the increased space and size of our new yuarters appeared thoronghly delightful.

In the alternoon we went for a drive throngh the perpuons Hindoo suburb of Chatar (thait to the celebrater "Tomls of the Kings ‘at Gollionda, which, however, must not he confounded with the celebrated dimomil mines of the same name, for they are nearly ome hondred miles afrart. The jowd to the Tombs passes orer a stony belt of plain, on which gigantic masses of darls pranite lie on all sides in picturesque confusion. The natives lave a legend that they are the frogments left orer at the completion of the Creation. Alout seten miles from the city, a solitary glomy-lowking lill rises, cromed by a fort, at the foot of which stand the Tombs. They are magnificent buikdings with grand kublad or or domes rising above the terraces, arcades, and mimarets of the main edifice. One of the finest of the Tombs, derticater to the menory of a Kootnh, shahi kin!, has merfomately been whiteWashed within amd without. The Tombs are mainly lonilt of grey granite. They are nearly all corered with beantifn mosaics and emamelled tiles, mutilated, howerer, in too mary instances ber the hands of motern relic-lmonters. The bouldings are suromuled by gardens fragrant with champa and orangehossom, and gay with many other flowers. One can see that formexy the gardens must have heen much more lorely and luxuriant than they now are. The decay and ruin were caused ly the great sicge in the days of Aurangzib. Extensive repairs hare hoen carried out ly Six Salar Jung. He has restored the gardens, and saved the Tombs from the destruction which hat gradually been ereeping orer them.

We drove back, as we had come, in one of the Nizam's carriages-a drag drawn by four horses, deverly managed by the chief coachman (an Encrishman, naned Ulett), who
twisted his steeds abont in the most marvellous way, especiafty in the garden before starting, where they might have been said to have 'turned on a sixpence.' I occupied the boxseat coming home, and enjoyed the deticious freshness of the evening air, among the picturesque rocks which rose up on either side. One of these, called 'One Gun Rock,' looks exactly tike a camon withont its carriage, resting on an elevation and pointed towards the city. There is another rock with a similar name near Secunderalnad; but the resemblance in that case is not so striking.

In the evening we dined with a native gentleman, who spoke English fairly well, and gave us a smmptuous repast in European fashion. Besides a multitude of chandeliers in his house, he had a billiard-table with glasis legs, and splendid red satin chairs also with glass arms and legs. The view from the root, to which we ascended after dimer, over the city, hathed in the light of the full moon, was really heantiful and quite romantic. On leaving, our host handed each of us a littef flucon of most leficious attar of roses.

Gun Fuck

The foltowing morning we were cafled at five o'ctock, and by seven were driving towards Secunderabad, five or six miles distant. On leaving the Residency, which stands in the suburb of Chatar Ghat, about a mile to the north-west of the city;
we drove through the city of Hyderabad, where the prepulation is mainly Mahomedan, and atterwarts through the

outlying suburbs and villages, chiefly inhabited by Hindoos. Two miles north of Secunderabad is Trimulgherry, the headquarters of the Hyderabad Subsidiary Force, and a rery important military station for European troops, the city of Secunderabad itself being garrisoned by native troons. Onetree Hill is not very far from here, called after the solitary palm-tree standing in the midst of a mass of rocks. Passing the city, we came to the barracks of the 7 th Hussars, and then to Bolarm, where the Resident lives during the rainy season. His loouse is quite charming with its handsome ballroom, numerous lawn-temis grounds, and trell-kept gardens, in which we gathered violets and roses. The hreeze was quite invigorating, the difference hetween the air here and at Hyderabad being very remarkable, considering that this is only 200 feet higher. The riew from the top of the house,
towards Byham's Monument and the quarters of the Hyderabad Contingent, was also interesting, the landscape resembling burnt-up, hrown, breezy 'down' country, and reminding us all of Sussex.

We drove back to the Residency to breakfast and there sat yuietly and read all the morning in our pleasant rooms. Late in the afternoon we drove to the tank of Mir Alam, where a brotlier of Sir Salar Jung was waiting for us in a steamlaunch, in which we made little voyages up and down the socalled ' tank,' which was in fact an artificial lake twenty miles in circumference, and covering an area of io,ooo acres. Everyhody went into rapures over the scenery, which was not unlike the tamer
parts of Loch Duich

or Loch Carron, in Scotland, with the addition of an occasional mosque or tomb perched on the rocky heights. It was extremely pleasant, steaming slowly about; and, as the sun went down, gorgeous effects were produced behind the rocks and hills. Prettier still when it became dark and the lights began to trinkle on the hill-sides, and in the tents, pitched in readiness for a dimmer party to be given by Sir Salar Jung this evening. The drive home through the densely crowded tortuous streets was most amusing; though one never ceased wondering how the drivers, even with the aid of the active syces, managed to aroid rumning over somebody, so thoroughly careless did the throng of people appear of their own safety.

The next day, Feloruary inth, we were again awakened at a rery early hour, and drore off to a spot in the Nizam's preserves, about six miles distant, where we were met by elephants, bullock and horse-tongas, and two cheetahs in carts, in readiness for the projected black-buck hunting expedition. Our guides strongly recommended us to select tongas instead of elephants as the mode of conreyance, saying that the black-buck have been so frequently honted of late that they are alarmed at the sight of elephants. This advice proved good, for we soon afterwards found ourselves close to four fine animals. The cheetah which was to be first let loose, and which was carried on one of the tongas, became much excited, though he was blindtolded by a leathem mask and not allowed to see his prey until quite close to it. He stood up in the cart lashing his tail, and now and then curling it round the neck of the driver like a huge boa. When at last he was set free he darted forward and, alter crouching behind a hillock waiting his opportunity, made a tremendous spring right on to the back of a buck, striking the poor animal such a how on the side of the head that it must have heen paralysed before the cruel teeth of the cheetah seized its throat. It was
a splendid exhibition of brute strength and agility; but I carefully kept far enough away not to see any of the painful

details which are inseparable from such sport, and which must, to me, always mar the pleasures of the chase.

Proceeding in another direction, we soon came across a large herd of black-buck; but the elephants had by this time caught us up, and the moment the deer perceived the huge creatures they bounded away. The elephants were therefore left hehind with the horses, and we all seated ourselves on the tongas, creeping in this way quite near a hexd of forty or fifty does, with six or eight fine loweks feerling with them. At one of these bucks the second and smaller.
cheetah wats let go; hat he conld not make up his mind which buck to try for, wherely he lost hoth his opfortunity and his temper, and went off sullity into the jungle, from which his keeper had considerable difficulty in recapturing him.

We had in the meantime gone on with the first cheetah till we came to a herd of about eighty black-huck, and they allowed us to approach pretty close to them before starting off at a good romod trot. The largest louck took atarm, and was out of sight in a moment; but by making a détomer we managed to get near the others, and the cheetah was once more set free. After a moment's hesitation he fixed his attention upon the finest of the bucks in sight, and after a short gallop in pursuit mide a tremendous spring upon his frey. This time, fowever, the cheetah missel his mark, and, fatting short, rofled over ignominionsly in the

dust. Fecovering himself in an instant, he made another and more successful spring, and despatched the poor buck with the usual quick, lightning-like stroke of the paw. The
force with which the cheetal strikes his victim is marvellous. I have heard that a tiger can in the same way crush the head of a water-buffalo like an egg-shell; and the power of the cheetah's paw must be little less in proportion. It is, of course, well known that the tiger's retractile claws are like those of a cat, whereas the cheetah has toe-mails similar to those of a dog.

The drive back to the Residency seemed long and hot, and I was glad to rest awhile after our early excursion. Later in the forenoon we drove through the city, this time behind a team of Austrian greys, on our way to breakfast with Sir Salar Jung at the Barah Dari Palace. Sir Salar is Prime Minister to the present Nizam, and is the son of the eminent Indian statesman whose spare figure, clever face, well-cut clothes, and snowy turban were seen often during his visit to London twelve years ago. He received us very pleasantly, and showed us over his palace, built around a fine courtyard, with elaborately carved marlle seats at intervals. The palace itself contains quantities of European chandeliers, musical boxes, portraits in oil of past Nizams, Maharajahs, and Governors-General. Sir Salar has also a fine collection of Indian arms, and we were shown the skin of an enormous tiger killed by limself only last week.

Breakfast was served in a most delightful verandah overlooking a courtyard with flashing fountains and green and shady trees, the talle being prettily decorated, and the meal arranged in the most approved European fashion.

Afterwards we returned to the Residency, and the hottest hours of the day were spent in reading and writing. At four o'clock I again drove out with Mr. Furdonji Jamsetjee, the Ninister's private secretary, passing through the picturesque and interesting natire bazaars. The narrow whitewashed streets lined with little shops, gaily decorated with gold and bright colours, form a fitting background to the smartly
dressed groups moring about among them. We did not pause to make any purchases, but stopped the carriage at many points to admire the motley crowd and the curions and beatiful mosques and temples.

We were fortunate enough to meet two processions, one literally a 'wedding march,' and the other a nomerous company of Hindoo worshippers. First came a noisy, turbulent (rowd of mative soldiery, escorting a young minn mounted on a very fat horse, dressed in gorgeous kincol, with eight people holding an enormons mulsella over him. This proved to be the bridegroom, and he was followed by many elephants and camels. As for the mifortunate loride, she was immured in a closely covered palanquin decorated with red velret and goll. How she cond live and breathe and have her being in such an airless box will always be a mystery to me, for we were gasping for breath in our open carriage. The second procession consisted of many more elephants and camels, with the addition of bands of hrass and other noisy instruments. The central figure of this caralcade seemed to he an old priest carrying on his head a bulky package mapped in green cloth, which, I heard, was an offering to lee made in an adjacent temple.

Hyderabad is milike any other city I have jet seen in India, and, indeed, is said to resemble no other Eastern tomn. Nowhere, not even in the seaports, is there so mixed a population. As Mr. Edrin Arnold says, 'You see the Arab, short and square, with his silver-hound matchlock and daggers ; the black-faced Sidi ; the Robilla, with blae caltam and Munderbuss ; the Pathan; the Afohan, dirty and longhaired; the Rajpout, with his shield of oiled and polished hide; Persians, Bukhara men, Turks, Mahrattas, Madrasses, Parsees, and others.' The people are all allowed to carry arms - a privilege of which they fully arail themselves, evidently regarding dageers, knives, matchlocks, and a sword
or two, as fit finery for festivities and merry-makings of every lind.

Notwithstanding their ferocions appearance, the people of Hyderainad are not more quarrelsome or turbulent than those of other cities, and recourse is rery seldom had to these swords, daggers, or guns. The inlaying of arms and the sale

of so-called ancient weapons to curiosity-collectors is, naturally, one of the specialities of Hyderabad. An immense quantity were brought to the Residency this morning for our inspection, and they made a glittering display in the marble portico. Among them were swords with watered blades,
called johurdas, and worth several hundreds of pounds; leesides innumerable scimitars of every shape, rapiers, blunderbusses, and exquisitely ornamented but treacherons-looking daggers and other stabling instruments.

It has amused us much during our stay here to watch the elephants taking their baths. The Nizam owns three hundred of these big beasts, and all the nobles possess elephants in proportion to their rank and wealth. The hage creatures are driven down to the river night and morning, and it was most curious to see the unwieldy animals lay themselves flat down on their sides in the shallow water, so that nothing but a small island of body, so to speak, was risible, while an oceasional lazy switch of tail or wave of trunk indicated the languid feeling of pleasure and contentment enjoyed by the bathers. Their keepers, helped ly a small boy who clambered up their steep sides, assisted the clemsing process by scrubbing them rigorously with a sort of stable-broom. As soon as one side was thoroughly cleaned the boy jumped off, and at the word of command, with a tremendous upheaval, and amid a great displacement of water, the huge beast flopped down again on its cleansed side, uttering a prodigious grunt of satisfaction, and quite ready for the same process to be repeated. Such a splashing was never seen; especially when, as chanced to be the case whilst we were driving past, fitteen elephants were taking their loaths at the same time. I felt quite atraid that one little baly elephant, who had timidly followed its mother, would be orerwhelmed and drowned by the wallowing and flounderings of the older animals.

Suturday, Fobrumy 12 th. -Our early expeditions of the last two mornings have been so tiring, that $T$ determined to remain quietly at home to-day until it was time to go to breakfast with the Nizam at eleven oclock. At half-past ten his Highness's beautiful coaches eame for us ; and-Mr.

Cordery and I leading the way-we drove throngh the Chowk, one of the broadest streets of the city, to the palace. This is reached through the stables; and the horses, evidently waiting inspection, were standing with their heads out of the doors of their hoxes; their grooms, in yellow tunics, lhue trousers, and red waist-bands much trimmed with silver, being stationed at the animals' heads. At one corner of the 'quadrangle in which the stahles are built is a passage leading to a second and larger square, crowded by numbers of the Nizam's retainers. We passed through this to a third courtyard (said to cover as much ground as Lincoln's Inn Fields), and there alighted, at the bottom of a fine flight of marble steps, overlooking a charming garden with the usual tank in the centre. The effect was, however, rather spoilt to European eyes by a very ill-cast bronze figure, holding in its hand a large coloured air-ball, such as are sold in the streets of London for a penny each. The Nizam (now about twentyone years of age) is so delighted with these balls that he has ordered two hundred of them, so that when one explodes it may be replaced immediately.

From the entrance-hall, marble corridors, from which hung handsome glass chandeliers, led into the centre room of a fine suite of apartments, where the Nizam shortly afterwards joined us. At breakfast I sat between his Highness and his chief aide-de-camp, neither of whom touched anything, except a glass of iced water and a cup of tea, during the whole of a very long meal. Subsequently the Nizam kindly caused all his best horses and ponies to be brought to the foot of the marble steps for us to see. There were Arabs of high degree, thoroughbred English horses, and very good-looking Walers among them, besides some tiny ponies, four of which, when harnessed together, drew a real Cinderella coach of solid silver. Although I delighted in looking at these beantiful animals, I became so tired that I had to make my escape. Some of
the party stayed and went through the stables, harness-rooms, and coach-loouses, which must, from their account, have been well worth seeing. They were especially struck by the perlect training of the horses, who seemed as docile as littens, and would jump in and out of their stalls, take a straw out of their groom's mouth, and when told to 'go' would dash off wildly round the garden (to the great detriment of the flowers and plants), returning instantly to their stables at the word of command.

From the Nizam's palace I drove to see the wife of the Finance Minister, Mehdi Ali-an intelligent lady, who speaks English wonderfully well ; in fact, she expressed herself so perfectly that it was difiticult to believe she had scarcely spoken a word of our language for more than a year and a half. It seemed sad to hear that she never went out, lecause she did not care to go 'covered up,' and that such had been the seclusion of her existence, that she scarcely knew any animals by sight, except from pictures, and had no pets, except, as she said, 'pet books.' She showed me the books gained as prizes at college by her two nephews, with evident appreciation of their contents, one being Prescott's 'History of America,' and the other a translation of Homer's 'Tliad.' I parted with her after receiving the usual garland of honour on leaving, feeling gratefud that Providence had not phaced me behind a purdah, but had allowed me to go about and see the world for myself instead of having to look at it through other people's eyes.

The midday heat was so great that we gladly rested at the Residency until it became time to go to tea with Fhurseed Jah, whose house is only a little distance off. We were received at the entrance to the garden by our host and his son, who led us to a marble platform by the side of a tank on which three boats were floating. One of these had the name of 'Sunbeam 'painted upon it ; but the compliment must have been
paid some time ago, for both boat and paint looked decidedly shalby. On a marble platform in the centre of the tank a band was playing. My little girls embarked for a row in the boat, discarding the services of the four boatmen who, apparently disliking, like Othello,

We were offered ices, tea, coffee, and other good things, whilst the band played its liveliest airs. Presently oldfashioned bath-chairs arrived to take us up by an avenue of palms to the house, where the Narral, showed us photographs
and portraits of various distinguished people, and-with natural pride-the preparations he is making for a Jubilee dimmer on the 16 th, when he will entertain 300 guests in a spacions marquee. The whole place is now cncumbered with bullock-carts, bringing up stores, provisions, and wines for this great occasion.

The Nawab earnestly pressed us to fix a day on which he might be allowed to entertain us; but want of time made this hospitable plan impossible. On parting he presented us each with a bouquet, as well as with the usual bottles of scent, the number of which varies, I observe, according to the position of the recipient. On these occasions I find my number is generally eight, lut occasionally only six ; while some of the party get four, and others the still more modest allotment of two bottles apiece. The drive home, throngh the cool air beneath the bright stars, amid the twinkling lights, and the cries and 'chatterification' of birds going to bed, as well as the flutter of flying-foxes slimming overhead as they hurried forth on their nocturnal predatory expeditions, was really the pleasantest part of the day.

In the evening there was a dimner party at the Residency, which included Sir Salar Jung, his brother Mooner-nl-Mulk, and several European guests. Sir Salar is of gigantic physical proportions, and well merits his sobriquet of 'mountainman.' He has been a great deal in England, and is well acquainted with European manners and customs. Colonel Marshall, another of the guests, who since the retirement of the Nizan's former tator has acted as his Highness's private political adviser, will be a great addition to the English element in Hyderabad. He has already occupied a similar position with the Rajah of Chumba, and has thus gained much experience to fit him for his delicate task here. There are many private cabals and intrigues among the nobles, as well as among the relatives of the Nizam, and little interest is taken
in the administration of public affairs. Many amusing stories are related of the inevitable rivalry between the nobles, and I was told that, one of them laving assumed the title of 'Glory of the Sun,' his nearest relative and rival immediately capped it by taking upon himself the transcendent appellation of 'Glory of the Hearens.'

On the morning of February isth we had to get up very early in order to start for Bombay rica Poonalı, all our luggage haring been sent to the station overnight. Unfortunately our little party now comprises two invalids, for Mr. McLean has been ill for some days past, while Mr. des Graz is suffering from a touch of smastroke. Before starting, Mr. Cordery took us round the beautiful garden of the Residency to see the preparations to celebrate the Jubilee. The outline of the house is to be illuminated with butties, little earthenware or glass pots filled with wicks floating in cocoa-nut oil, like those used at South Kensington. The grounds are also to be lighted up with pretty arcades formed of palms, and hung with lanterns; while beyond the garden is a large open space, where quantities of fireworks are to be let off.

By Colonel Narshall's desire, Ulett bronght the Nizam's state coach-a huge canary-coloured, boat-shaped vehicle, hung on the most elastic of Cee springs, with solid silver railings, trimmings, and canopy supports-to convey us to the station. The coachman wore a canary-coloured livery (the royal colour of Hyderabad) stiff with silver lrocade ; and the eight attendants were dressed in yellow, blue, and red costumes. There were several other state carriages, so that we formed quite a little procession ; and just as we reached the station Afsur Jung, the Nizam's aide-de-camp, drove up to lid us farewell, in a pretty little dog-cart drawn by four Pegu ponies. At 8.45 precisely the train steamed off, atter much hand-shaking and many good wishes from a large group of kind friends, who
had each and all brought nosegays, so that the saloon was turned for that day into a perlect garden.

We brealifasted comfortably in the train; but later the sun began to blaze down so fiercely upon us, that I fear our two invalids must have found the heat and the shaking of the carriages rather trring. We reached Wadi at three o'clock, and Hingoli about seven in the evening-very tired. This is the junction for Bijapur, one of the most ancient cities of India, and once the capital of the Deccan. Its walls are of immense extent, and it is guarded by a fort six miles in circumference. In fact, what is now called the city is only the ruins of that portion of it which used to be enclosed within the fort. The mosques and tombs are of great interest, and I am sorry there was not time to risit them. The mosque and tomb of Ibrahim Rozah are said to be unsurpassed

No Coal by anything of the kind in India. They are, however, carefully described by Mr. Fergusson in his 'History of Architecture ;' and he also gives full details about the many fine ruins of Bijapur, including the Gol Gumbaz, or Round Dome-a mansoleum built in honour of Sultan Muhammad VII. - the Cathedral Mosque, and the Ark, or Citadel.

On Monday, February 14 th, at 5 a.m., we reached Poonah, the capital of the Mahratta country, izo miles distant from Bombay. Here we were shunted into a siding, where Dr. Hoffmeister soon joined us, bringing good news of all on board
the 'Sumbeam,' which had had a splendid passage of fifty-two hours down from Kinrachee to Bombay, making the shortest run on record entirely under sail. He also eased our minds by his farourable opinion of our invalids, thongh his examination could be but superficial.

Mr. Crawford, the Commissioner, appeared about eight o'clock, with several carriages, and kindly insisted upon our spending the day at his house, which, I need scarcely say, was a very pleasant plan. He first took us for a drive round the city to the Govermment House, called Ganesh Khind, where the Governor of Bombay lives for several months in the year. It was delicious to stroll about the charming grounds, bot it was equally pleasant to return to breakfast at the Commissioner's bungalow, which stands on the banks of the Mula River. Mr. Crawford is a great horticulturist, and has surrounded his dwelling with a beautiful garden, filled with a profusion of all sorts of acclimatised plants, flowers, trees, and fruits. The crotons, dracænas, and ferns seemed particularly fine, and two arcades of bamboo trellis leading from the house to the river-bank made very pretty features in the sylvan scene.

A poultry-yard stands next to the garden, filled at this moment by a great many fowls, all ready for the Poultry Show next week. I had heard ol this Show a few weeks ago, and was much pleased to see some of my own birds, which I had sent for from the yacht, holling their own against fine specimens from all parts of the world. They had, of course, originally been brought from England for the prosaic purpose of forming an addition to our larder, a fate from which they hare happily escaped, as they will not now return to the 'Sunbeam.' There was also a miniature zoological-garden, containing a numerous collection of deer and smatler animals, including a sweet little monkey, with which the children, of course, immediately fell in love.

he had to hurry off to look after the preparations for the ball which is to be given by H.R.H. to-night in honow of the Jubilee. The date of this ball was only fixed twenty-four hours ago, and there is naturally a great deal to be done, though people in India seem to take these sudden arrangements quite as a matter of course. The Duke and Duchess of Connaught liad graciously telegraphed to Hyderabad to ask us to stay at Poonah for the ball; so, though difficult to manage, we have decided to remain for the earlier part at any rate, and to leave by the it p.n. train, which will bring us to Bombay earty to-morrow morning.

After the usual siesta and five o'clock tea, I went with the Commissioner to attend a meeting of the ladiess committee of the Poultry Show, held in a tent on the spot where the Show is to take place. All the arrangements seemed excellent, and there was nothing for me to do but to express warm approval. We then went for a short drive through the principal streets of Poonal, which includes a picturesque native town, besides charming suburbs where the bungatows are half buried in gardens. The wellknown Bund Road, surrounded by hills, has been so often and so well described that it would be absurd for me to attempt to say anything about it after the hasty glimpse caught during the pleasant drives of this morning and afternoon.

Directly after dinner we went in an open carriage to the ball at the Gymkliana. The bright lights and lamps of a long row of carriages waiting outside made a pretty and animated scene as we drove up. The guests were received at the entrance to the ball-room by the Duke and Duchess of Conmanght. H.R.H. danced the first quadrille with me, and the next two with Mabelle and Maude Laurence. We were pressed to protong our stay until to-morrow; this was, unfortunatety, impossible, for we are already overdue in Bombay,

At a quarter to eleven I left the ball-room, and the young ladies followed shortly afterwards. We went straight to the station, and, re-entering the train, were again shunted on to the main line, starting at last on the final stage of our journey to Bombay.

## CHAPTER III.

## BOMBAS.

ILOOKED out of the carriage window for some time upon the distant ghauts, and the nearer and fantastically shaped rocks with their tropical regetation, now bathed in moonlight, until at last I happily dropped off to sleep, and remember nothing more until we reached Bombay at 7 A. M.

There we found Mr. Findred and the men from the yacht waiting to meet us. Leaving them to look after the luggage,
the Doctor and I got our two invalids into gharries, and drove at once to Mababar Point to stay with the Governor and Lady Rear. Tom shortly afterwards appeared and surprised us by his description of the unprecenentedly guick run of the 'Sunbeam' from Kurrachee. Then Lady Reay and Captain Hamilton came to wekeme us, having just returncd from their morning ride. Breakfast over, the rest of the morning was busily spent in writing and in getting things into order.

In the afternoon we drove with Captain Hamilion along the Breach Candy road to the famons Towers of Silence, or Pursee cemetery, where we were met ly Sir Jamsetjee Jejeebloy's secretary, who conducted us over this most interesting place and explained fully the Parsce method of disposing of their dead and the religious motives which led to its adoption. Much as the explanation interested me, I will not repeat it here; but I must notice the beanty of the vien from the Prayer-rooms, and the solemn stilhess of the garden below, where the relatives of the departed come to talk peacelully over their memories. Howerer admirable the arrangement may be from a sanitary point of view, I never could get reconciled to the presence of the vultures, though they were not at all unpicturesque, for their unwiedy copper-coloured bodies contrasted well with the massive and brilliant foliage.

From the Towers of Silence we drove in a lind of ruadruple dog-cart, with four seats facing alternately outwards, forwards, and backwards, and drawn by a diery pair of horses, through the native town to the yacht. The view fiom the road, cut, as it is, in the side of the Malabar hill, was both beautiful and striking. It looks down upon a perfect sea of palm-leaves, gently waving in the breeze, which conceal, save where the tower of some tall building peeps forth, a city of more than 800,000 inluabitants.

Four o'clock of the morning of February i6th found me in the verandah outside our bungalow, listening to the roaring of the camon, which ushered in the day on which was to be celebrated in India the Jubilee of Victoria, its Queen and Empress. The hours are early here, and at a quarter to eight Lady Reay, Captain Gordon, Tom, and I started to 'assist' at the grand ceremony at the Town Hall, followed later by the Governor and his aides - de camp. As we neared the city the crowd became
dressed in all appaof enthu-

clad in the gayest colours, arranged with perfect taste. The only specially distinctive mark in their costune is a rather mbecoming white band drawn tightly over the brow. In many cases, however, this had been judiciously pushed back so tar as nearly to disappear muder the bright-coloured silk sari which only partly concealed their jet-black and glossy tresses. Every Parsee has to wear the sacred shirt of cotton ganze, and the Kusti, or cord of seventr-two woollen threads, representing, like the divisions of the Towers of Silence, the numbers of the chafiters of one of the sacred books.

Near the Town Hall the scene became still more animated, and the applanse of the multitule, thongh much more subdued in tone than the roar of an Enghish crowd, was quite as entlusiastic. The men from H.M.S. 'Bacchante' liner the approaches to the buiding, and the Bombay Tolmeteers acted as a guard-of-honour. We were ushered into the gallery, where chairs were placed for Lady lieay and myself close to the Governor's throne. The sight from this 'coign of vantage, was indeed imposing. Immediately in front stretched a fine flight of steps, covered with red cloth, and crowded with European and native officials in every variety of costume. The approach to the steps was through a pretty garden, where the wealth of tropical vegetation was set off by flags and gaily coloured banners. A dense crowd of natives ringed this enclosure round, whilst lofty houses, their gaty draped balcomiss and windows filled with bright and happy faces, made a brilliant lackground. Presently the Governor was seen approaching, escorted by his own bodyguard and a company of monnted volunteers (now caller the Bombay Light Horse), who looked very picturesque and soldierlike as they dashed through the crowd. All dismounted at the west entrance to the garden, where a procession was formed, at the head of which the Governor adranced and, amid a
flourish of trumpets, took his stand in front of the throne to receive the addresses and telegrams presented by, or on behalf of, rarious classes of the community in the Bombay Presidency. No less than fifty-eight congratulatory telegrams from public bodies in the Mofussil had been received, and, after leare asked and granted, a number of deputations were introduced, who presented their documents enclosed in handsome caskets or in kincol bags. Almost the first telegram came from his ITighness Aga Sultan Mahomed Shah, a

potentate who is regarded by his followers with great awe and reverence. Then follorved a message from the Rao of Cutch, enclosed in a beantifully embroidered hag, succeeded by many others. Fortunately all save two were 'taken as read,' the exceptions being the address presented by the inhabitants of Bombay and by the Senate of the University. The presentation of the caskets, some of which mere quite works of art, occupied a long, long time. One casket seemed to be covered with a sort of lacework of ivory and ebony, and was still further ormamented ly wreaths studded with gold and exquisitely modelled figures of elephants and wild beasts. Others, again, were of ebony profinsely inlaid with silver.

The Governor's rephies to the addresses were most happr, and evidently touched the feetings of his hearers. As he uttered his final words two foung middies, perched on a dangerous-looking comer of the parapet, scrambled on to the roof, and, at a given signal, smartly unfurled an immense Royal Standard, amid the thunder of an imperial salute of ior guns. The effect of the whole scene was deeply inpressire, as well as suggestive. I lave seen many ceremonies both at home and abroad, but never one more picturesque or of more thrilling interest.

From the fown hall we went, still in procession, to the cathedral, which stands close to the Elphinstone Garden, where a musical service was hell. 'God sare the Queen' was magnificently rendered, and the two specially written verses which were added to the National Antlem were most effective.

After service the Governor and Lady Reay, with their aides-de-camp, in one carriage, and we in another, retumed to Malabar Point, where we were only too glad to put off our finery and rest quietly indoors until half-past four, precisely at which hour we had to resume our war-paint and go, again in procession, to Parel, to meet their Royal Highnesses, the Duke
and Duchess of Comanght. The road lay through the poorer part of the city, lut was made gay and interesting ly the crowd of people through which we passed, and by the preparations which all were lousily making to take part in the Jubilee.

Parel is the official residence of the Governor of Bombay ; much larger than, but not nenrly so agreeable as, the house at Malabar Point; howerer, each successive Goremor appears to entertain a different opinion on this subject, and Lord Reay's predecessor preferred Parel. The garden, with its fine trees and luxuriant regetation, is pretty, but not very private ; for a Hindoo house, much used for marriages, stands on one side of the tank which borders it, while the tramway almost touches it on the other. The house itself, originally a Portuguese chapel and monastery, is three-storeyed, and contains some fine spacious rooms. The present Governor intends to give up Parel for the use of the Victoria Technical Institute till a more suitable building can be found.

In the adjoining bungalow a sulstantial tea, with all sorts of cooling drinks, was temptingly arranged among masses of flowers and greenery. The serrants from Malabar Point seemed to have arrived by magic, and their picturesque liveries added much to the brilliancy of the scene. The refreshments proved not to be loy any means useless, for the Duke and Duchess of Comnaught had commenced the day at Poonal by inspecting the troops on horseback at 7 A.m. ; and this was closely followed ly the opening of the Poultry Show and sereral other functions, to say nothing ol a railway journey of six hours in the lieat of the day from Poonah to Bombay.

In a pleasant, inlormal way, we were then told off to carriages from which to see the illminations, an escort of cavalry and of the bodyguard heing provided to prevent, as far as possible, our small procession being broken up by the

cromd. In the suburls the illmminations were gemeral but simple in design. There was a more pretentious disflay in front of the Veterinary Hospital, consisting of transparent pietures of horses and enws. This hospital was established by Sir Dinshan Manockjee Petit, one of the largest millormers of Bombaty, who has receiven the honow of knighthood as a Jubilee gilt.

Presently the crowd became more numerons, and hegan to rum alongside the carriages, shouting, and carrying lhe lights, a compliment with which we could well have dispensed ; for the smoke, the clouds of powder which ther nccasionally ther into the air, the dust raisch as they roshed along, and the general heat and want of air in the narow streets, had a stifling effect. The illuminations were not only antistically beautiful, but afforded a prof that mpmons of exry religion and class had united to do honour to their Sorereign. Among the most striking buidings were a Mahomedan Mosque, the lines of which were clearly defined against the starlit sky hy rows of pure thite lanterns; a Hindoo temple, where court within court was lighted in a simple and effective mamer ly lonttirs filled with cocoa-nut oil; and several Jain temples brighty illuminated with coloured lights. In the native quarter the houses were lighted up in the peculiar Indian fashion ly chandeliers suspented from the windows or across the streets -perhaps the most wonderful prart of the scene.

After driving through the crowded streets we proceeded to the Apollo Bunder-now officially called the Wellington Pier-to witness the illumination of the harlour and the grand display of fireworks. The harbour, with its thousamels and thousands of twinkling lights, was a sight to he remembered. Even the little 'Sunbeam,' though somewhat overshadoved by the huge 'Bacchante,' displayed with grod effect a row of coloured lights from stem to stern.

As we drove home we much almirel the illmmination of
the public gardeus on the Malabar Hill. The name 'Victoria' was written in lines of fire on its steep slopes, and was reflected with beautiful effect in the still waters of the bay.

Just before reaching home the horses in our carriage took to jibbing, and after nearly being precipitated over a wall and down an embankment we thought it better to get out and walk, which made us rather late for dinner. We were not alone in misfortme, homerer, for another of the canriages had collided with a tramcar ; and a horse in yet another vehicle, in which the A.D.C.'s were driving, severely injured itself.

The next morning (Thursday, February ifthi) we were all rather late-that is to say, for this part of the world. Personally, I began to work between seven and eight o'clock, and consequently got throngh a good deal belore breakfast. Afterwards a succession of visitors arrived, friendly, complimentary, and on lousiness, among the latter being many tradesmen, anxious to press their wares upon us. The rerandah was soon crowded by hox-wallahs, who squatted in the midst of their piles of brilliantly coloured silks, ganze, and muslins, or arrived laden with specimens of heary lacqueredwork, carved ivory, sandal-wood, Poonah inlaid work, arms, and jewels. A rerandah at the back of the chief bungalow, containing the reception-rooms, had meanwhile been completely filled by a long table, on which was displayed a magnificent collection of jewels belonging to a well-known jeweller and diamond merchant. Brilliants of the size of walnuts were there by the dozen, side by side with huge emeralds; bracelets composed of hundreds ol shining gems; a tiara of diamonds formerly belonging to the Empress of the French; rings with precious stones of such dimensions that none but a large finger could wear them; and altogether such a mixture of Oriental and European splendour, and ancient and modern fashions, as one would scarcely have imagined it possible to collect together. We made no purchases, but the
wealthy jewetter was quite fansen to have the othortunity of clisplaying his splendid wares. A comphiment from the Governor seemed to satisfy him comt detely; and before we had been five minates at lunch the whole of lis valuable stock was stowed away in two or three common-lookimg tittle boxes, tied up in cloth, and so triansported back to his strong box. I do not profess to be a judge of jewels, but those who knew more of such things than I did estimated the value of the collection at over a million sterling.

Early in the afternoon I hat to hurry off to the yacht to receive a targe party on board. In the evening
 a ball was given ly the Governor at Malalar Hill. It was a brilliant entertaimment in celebration of the Jubilee.

Everything had been well arranged : the drawing-rom with its perfect floor formed a beautiful hall-room, whilst in both verandahs stood plenty of sofas and lounges. On each side of the house the garden paths leading to the water's edge were
illuminated, fireworks being discharged from boats at interrals. The ships in the harbour were also dressed with fire instead of bunting. Above all, the air felt deliciously cool. On one side of the house bountiful supper-tables, decorated with large baskets of flowers, had been laid out under amnings spread beneath the trees. The band mas perfect, and though the ball was by no means over at that hour, it must have been quite three a clock before we all retired.

On Friday, February isth, we had another busy morning, making various arrangements for sea. Mr. McLean had been pronounced well enough to go home by to-day's P. \& 0 . steamer, which he was anxious to do, for he is to row in the Oxford Eight. Pratt, the steward, who has been with us during our journey through India, has been unwell for some time past, and is therefore recommended by the Doctor to return at the same time. We had always intended to send home my dear and clever poodle 'Sir Roger' from Bombay; his place on the steamer had been secured, and all his little belongings sent on board. Mabelle and I went off to the yaclit in the morning. About three o'clock Tom arrived, and at once went off with Mr. McLean and Pratt. They found 'Sir Roger' already established on board the steamer, but looking so utterly miserable that, knowing well how sorry we were to part with him, Tom insisted on bringing him back again. The poor dog has seemed quite crestlallen for some days past, and yesterday, instead of remaining quietly in my room at Govermment House, as he always does when I go out without him, he escaped and hid himself under the Governor's chair, only giving occasional notice of his presence by a short, nervous bark.

After the departure of the steamer Mabelte and I had only just sufficient time to reach Govermment House to be present at Lady Reay's purdech party, to which only ladies are admitted. The entertainment derives its name from the purdeh, or curtain, behind which Mahomedan and Hindoo
ladies are supposed to live, veiled from the sight of men. Lady Reay's visitors were all drensed in their best, amb seemed full of delight at this pleasant incident in their monotonous life ; hat their ways of showing enjoyment were various and amnsing. Some wanted only to look on ; others were glad to talk to any English lady who could converse with them, while others again were much taken up with the swcetmeats and ices. The behariour of two ladies amused me immensely. Their servant having awkwardly upset and hroken a glass, spilling the contents on the floor, they immediately flew at her and slapped her so hard that the sound of the blows combl be plainly heard all orer the room. The woman did uot seem to resent this treatment in the least, for she only langhed and proceeded to pick ap the pieces.

Several of these ladies asked me to allow them to go on board the racht; and when the others fom that I had

Bombay Harbour
promised to try to make arrangements to preserve the $p^{m}$ mold properly, they all wanted to come. I fomod, therefore, there was nothing for it but to give a large party on the only racant day lelt to us before our departure from Bombay. Mr's. H. Ali was specially interested in the matter when she found
that we intended to call, if possible, at Jinjeera on our way to Ceylon, and to see the Nawab, who has married her youngest daughter as his second wife.

Some of the dresses were quite gorgeons, and would take long to describe. The Parsees looked slim and graceful as Greek girls, their suris of bright satin or silk hanging in light folds and showing the strips of delicate narrow embroidery with which they were ornamented. The Hindoo ladies draped their surts around them; while the Mahomedans, with their bright-coloured trousers, skirts, and yashmalis, made a vivid contrast to the other guests. The skirts of some of the ladies were so full that they stuck out further than any crinoline ever seen, and must, I am sure, lave had more than a hundred yards of satin in them. When it was time to leave, it was curions to see how closely all the ladies reiled. Some of the attendants were provided with bundles which proved to be immense veils. These they threw orer their mistresses, shrouding completely both face and figure.

When this reception was over I had to dress and hurry down to the yacht to receive a party of my own friends, after which we all returned to Malabar Point to dimer.

The Byculla Club Ball, at which their Poyal Highnesses the Duke and Duchess of Connaught were present, took place in the evening; a splendid affair, held in spacious wellarranged rooms.

Next morning early the children went for a ride with their father and Captain Hamilton, and after breakfast there arrived

a continuous stream of hox-wallahs and visitors until midday. The Guicorvar of Baroda called to see the Governor, while Lady Reay and I sat in the verandah chatting with Captain Elliot, who has been till recently the Prince's tutor. The Guicowar speaks English well, not only correctly and fluently, but idiomatically. He is loyal to British rule, and the object of the present risit was to obtain a further supply of arms for his soldiers; it haring been considered desirable policy to encourage lim to form a large force of cavalry, which might be found valuable as auxiliaries. His adopted mother,
too, is a remarkalle woman. Duing the last Russian scare she offered to equip a band of Amazons for service in the field.

After this risit many preparations had to be made for resuming our royage; but they were finished in time to allow Tom and me, accompanied by Mrs. Keating, Captain Hamilton, and the children, to drive down early in the afternoon to see the ammal race-meeting at Byculla. The races are almost entirely in the hands of Arals, and are as a rule well worth seeing.

One of the most interesting sights to me was a group of horse-dealers lrom Arabia and the Persian Gulf. They have handsome faces and clear olive complexions, soft silky hair and monstache, and heantifully trimmed beards. These picturesquely attired men import large quantities of horses into India, and easily sell them, either singly or in batches, to other dealers.

From the racecourse we drove to the Oval, where 15,000 schoolchildren were to be feasted in celebration of the Jubilee. Being rather late, we met many of them coming array singing hymms and songs.

After this short glimpse of the children's festival we hurried on board to receive the Duke and Duchess of Comnanght at dimer, and the Governor and Lady Reay. Captain Moore kindly sent the band of the 'Bacchante' to play to us, and after dimner several middies from the flagship joined our little party. It was truly delightful to sit on deck in the cool erening lreeze and listen to the sweet strains of the music. At half-past ten we

RELIGIOUS FESTIVAL MALABAR POINT BOMBAY
embarked in the steam-launcl to look at the fireworks and the illumination of the shipping.

Felruary zoth.-Attended the beautiful evening service in the cathedral. The crew of the 'Sunbeam' accompanied us. The cool drive back to charming Malajar Point was most refreshing, and we enjoyed our quiet dimer and pleasant chat afterwards in the rerandah, notwithstanding the sad reflection that it was our last evening with our dear and kind friends.

Fchruary 21st.-This morning the children went out early with a large riding party. Alter breakfast I had to hury on board to make the final arrangements for the visit of the purdel ladies, and for our start this evening. It was rather a difficult matter to get our visitors on board the lig steamlaunch and other boats without risible masculine assistance; but all was accomplished salely and satisfactorily, and they mostered in great force. I think they all enjoyed this little expedition, with its novel experiences, greatly.

As soon as the last lady liad departed we hurried off to attend the St. John's Ambulance Meeting at the Secretariate, at which the Governor kindly presided. I earnestly hope it may be the means of reviving in Bombay some interest in the rather languishing local brancll of a very useful institution. Many influential people were present, including doctors, large millowners, railway and police officials, and employers of labour generally, all of whom appeared warmly disposed to support the movement.

Directly alter this meeting, Tom, who had intended to go on board the yacht with Lord Reay, was carried off by the bishop to see the Sailors' Institute. I therefore returned to the 'Sumbeam' alone, to see to various matters, and, later on, went back to Govermment House, where, as is nearly always the case, we had to dress for dinner in a desperate hurry. There was a large party assembled, among others being Sir Lepel Griffin.

All too soon came the last parting ; and, in a long procession of barouches, phaetons, tandems, and dog-carts, we drove down to the Bunder, descending the steps for the last time with Maude Laurence (who is shortly returning to England), Captain Hamilton, Mr. Herbert, Major Gilchrist, and several other friends who had come to see us off. It was a sad business.

pleasant sail had it not been for the amoying loss of time which it involved.

Just before daybreak we saw the Rajpoori light, and the one at Kemery, twelve miles south of Bombay. About 9.30 A.rr. the Nawab's brother came on board, and soon afterwards we proceeded to land. After rowing more than half round a curious island-fort, we arrived at the gateway, a small opening in the thick walls, where we were met by the Nawab himself, dressed in European costume, but wearing a red and gold twban, and surrounded by his native bodyguard.

The landing was rather difficult, for, owing to want of space, the boat had to be pushed in stern foremost. When this feat had been accomplished, some of the Nawab's followers brought chairs, and hoisted us with great dexterity to the top of the steps, where it was no easy matter to alight with the dignity proper to the occasion. Having received the salaams of the Nawab and returned his hearty welcome, we took a long walk all round the curions old fort of Jinjeera, lunilt five hundred years ago. It contains many narrow passages designed for security, for they are entirely independent of the bastions, each of which is provided with its own little water-gate for the admission of supplies or the escape of the garrison in case of necessity. I found the walk very fatiguing owing to the heat, and so did many of the others.

The temperature would indeed have been unbearable but for an occasional puff of cooler air which reached us through the embrasures. Some of the guns were of Spanish manufacture, dated 1665 , but most of them were lying useless on the ground. In no case would they avail much against modern ordnance; but the fort, owing to its natural advantages, would be difficult to attack. The present Nawab is of ancient descent, and one of his ancestors was an Admiral in
 Narrali's State became independent, and has remained so cree since. ILe lias about 70,000 subjects, in whose wellare he appears to take great interest. He has a shrewd face, is very English in appearance, and seems quite capalle of looking after lis own interests. ${ }^{1}$

It was delightfully refieshing to be able to rest in a
${ }^{1}$ The Nawab of Jinjeera is of Abyssinian descent, and is popularly called the Seedee or Hubshee, generic terms applied by natives of India to Africans. One of the Nawab's ancestors laid siege to Lombay Castle in 1688-9, and the Enclish, being unable to dislodge him, were compelled to seek the intervention of the Emperor Aurungzebe to secure the withdrawal of his forces.
spacious bungalow after our tour of the fort was over; and still more delicions was a curious sort of punkah, peculiar to the district, which fanned us pleasantly. The Nawal accompanied us on our return to the yacht, and afterwards sent us a most acceptable Nerzir, or present, of two linge bunches of bananas, as well as other fruits and vegetahles, besides milk and ghee.

The Nawab's second wife, whose mother we had met at Bombay, is a pretty little girl of about thirteen. She came on board to see us, but many precautions to preserve the purlah had to be taken. It was necessary to observe this custom in deference to the prejudices of her people rather than to those of her hushand. She had never been on board a yacht before, and was naturally much interested in all she saw.

Soon after twelve we resumed our voyage to the southward before a deliciously cool breeze, which lasted for a considerable time. Further on, the coast seems to consist of a series of plateaux, varying in leight from 200 to 600 feet, occasionally interrupted by a peak or a narrow strip of white beach, with here and there a small stragghing town. At sumset we were off Patnagiri, an ancient Malnatta fort comecterl with the mainland only by a narrow sandy neck. Its southern extremity is nearly 300 feet above the sea level, thus forming a headland, surmounted by a line of fortifications and bastions of great strengtli. The complete isolation of its position has doultless caused it to lee chosen as the place of detention of King Theebaw, who can have but little chance of escape. The entrance to the river lies to the eastward of the fort, and the intermediate space is covered with a luxuriant growth of cocoa-nut palms. The European station is to the northward, for the southern shore is rugged, and ends alruptly in cliffs and huge boulders. Small coasting steamers maintain as well as they can communication with the fort; but the approach is always difficult, and is almost impracticable during the sonth-west monsoon.

Mr. Crawford, who was formerly Commissioner here, had kindly given notice of our probable risit; for we had been anxious to land if possible to see something of King Theebaw, and to inspect the excellent industrial school established here. The district used formerly to be the great recruiting-ground for the Bombay army; but the young men now prefer entering the school, which, from one point of riew, seems a pity. It was with much regret that, after having made preparations for landing, we were obliged to abandon the idea of

doing so ; for it became both late and dark, thus adding too much to the difficulties, and even dangers, of the proposed expedition. We therefore sailed slowly past, throwing up rockets at long intervals, to indicate that we were proceeding on our course.

As the erening wore on the breeze dropped, and during the night we made but little progress.

Fchruary 25th.-A A calm and somewhat sultry might. Daylight brought a delicious and welcome sea-breeze, before which we sailed rapidly on our southward course. The morning was devoted to a general tidying up, preparatory to settling down for our long voyage.

Over the memory of the latter portion of this day I wish that I could draw a reil ; but, sad as is the story, and little as I desire to dwell upon it, it must be told.

Travelling, visiting, and sightseeing had so completely occupied our time in India, that I had found upon my return to Bombay a vast accumulation of letters from England and elsemhere requiring attention ; and as it was far beyond my strength to deal with them without assistance, I considered myself fortunate in securing the services, as temporary secretary, of a gentleman whom we had met at Bombay, and who had been strongly recommendel to us. Mr. Frank White was at that time engaged on the staff of the ' Bombay Gazette,' and, as Special Correspondent, had accompanied the present as well as the former Governor of Bombay upon their official tours. Now, however, he was ahout to leave India in order to take up an appointment on the staff old the 'Melbomme Argus,' and we, as a matter of mutual convenience, offered him a passage to Australia in the 'Sunbeam,' which he accepted, apparently, with delight. These brief facts will account for his presence on board the - Sunbeam.'

At luncheon to-day Mr. White was cheerful and full of
conversation, giving us an interesting description of the ammat migration of the members of the Bompay Government to Poona during the season of rains and monsoons. We had, as usuat, coffee, cigarettes, and a little gossip on deck before recommencing our quiet occupations of reading or writing. Mr. White strolled aft, and I soon became immersed in my book. Suddenly I perceived a change in the vessel's movement, as if the helmsman were neglecting his daties, and directly atterwards heard the thrilling cry of 'Man overboard!' Of course a great commotion ensued, the men rushing up from below, all eager to render assistance. I ran aft, whence the cry had proceeded, seizing a life-buoy as I passed, but found that

one had already been thrown over by the man at the hetm, who exctaimed, 'That gentleman,' meaning foor Mr'. White, 'has jumped overboard.' A boat was towered, a man was sent up to the cross-trees, another on to the deck-house to keep a look-out, and the ship was put about in an incredibty short space of time. In the meanwhite hasty preparation of hot bottles, blankets, and other remedies was made on board, in case the boat should happity be successful in her search. But althongh she rowed over the exact spot many times, and picked up Mr. White's helmet and the life-Jouoy, nothing more could be discovered.

The agonised interest with which that little boat was watched
ly all on board will always live in my memory. Two men had jumped into her just as they had rushed on deck, without shirts or hats to protect them from the burning sum. Another was preparing to spring orerboard when he was forcibly restrained ly Tom, who saw that it would by this time be utterly useless. All on board worked with a will to get the ressel round and to lower every stitch of sail ; no easy matter with every kite set, and the yacht ruming from ten to twelve knots luefore the wind.

From letters left behind it was painfully clear that a determination of many days past had just been accomplished. It appeared that Mr. White had questioned the doctor-who little suspected his object-as to how long it would take to stop the resset when rumning with studdingsails set before a strong breeze. The unhappy man had constantly complained of inability to sleep, and he had been seen on deck the previous night long after everyone else had gone to bed. Of the motive for the rash act it is impossible to form an opinion. Borne down by physicat and mental suffering, he must have been orercome by a temporary aberration of inteffect, which rendered him for the moment irresponsible for his actions. I need not dwell on the terrible shock which the dreadful catastrophe caused to our hitherto happy little party. The evening was a sad one, and not even the excitement of making the lights off Goa, bringing the ship up, and anchoring for the night, or the prospect of an interesting excursion to-morrow, could raise our spirits or dissipate the depression caused by the sad event of the afternoon.

Fobruary 26th. -Orders had been given for steam to be ready in the launch by six o'clock, so that we might get ashore soon after daybreak, and thus avoid the heat of the mid-day sun, which is now lecoming quite a serious matter. But the painful duty of collecting and packing up all poor Mr. White's things to be sent back to Bombay had first to be
performed, and it was nearly half-past seven before we were ready to land.

Just as we were starting, Mr. Norman Oliver, the Assistant Delegate at Goa, arrived alongside in his pretty little schooner yacht, of mative design and build, Jut of English rig. He brought with him a very kind letter from Mr. H. D. Donaldson, the assistant engineer of the new Portuguese Railway, now in course of construction, to connect Goa with the English lines northward to Bombay and eastrard to Madras. If only the inhabitants of Goa will make use of
 the new railmay, it ought to lee of the greatest ralue to them. Such, howerer, is their conservative disposition and so great is their pleasure in obstinately creating and maintaining, in the form of customs-duties, olstacles to commerce and free circulation, that it is considered proballe that the railway will have to be continued some fifty miles to the southward, as far as the British port of Carwar, hefore any perceptible increase in the export of produce can lue looked for. The line to Goa is now nearly completed, and will, it is hoped, be opened after the rains. Mr. Donalrlson kindly proposed a tempting trip orer it to the summit of the Sahyadri Momntains, or Ghats, which form the eastern boundary of the Portuguese territory. Unfortunately we are alreaty so much behind our time that we shall have to press forward as quickly as wind and waves will allow, if we mean to adhere to the original plan of our royage with anything like punctuality.

So many difficulties are thrown in the way of would-be visitors to the churches of Goa, that although Mr. Oliver had kindly sent his sepoy on to announce our arrival, and had written to the Administrador to ask leave, we were recommended to wait for an how or tro on board, to allow time for the necessary forms to be complied with. A refreshing seabreeze was blowing, and at ten oclock we decided to brave the sum and to proceed under the double awnings of the gig (towed by the steam-launch) across the bar and up the river towards Old Goa.

From the sea, the Portuguese settlement looks like a series of promontories, each crowned by a fort, with the river Mandovi in the centre, rumning up into the interior between richly wooded banks. Its coast-line is some sixty or seventy miles long from north to south, and its greatest breadth about thirty miles. The entire territory is hilly, and intersected by numerous rivers, of which the Mandovi is the most important. Both the ancient and modern cities of Goa have been built on its banlis. The promontories of Bardez and Salsette protect a fine harbour, capable of accommodating vessels of the largest tonnage during the greater part of the year. The climate of Goa is generally healthy, though smallpox and cholera have from time to time broken out there with great virulence.

Never was any place so totally unlike what I had expecterl -in fact, it did not in the least correspond to the idea which any of us had formed about it. The palace of the Governor
(who was for over three centuries called the Viceroy) stands in the city of Pangin, or New Goa, which, as I have alrearly said, has been built on the river Mandovi, abont five miles from

Cape Goa Entrance
its mouth. Curiously enough, the present Governor of Goa is our old friend Captain da Carvalho, who commanded the corvette 'Affonso Albuquerque' when she brought the King of Portugal to Plymouth last year, and lay alongside us for a fortnight in lovely Barn Pool, under the shadow of the Mount Edgcumbe trees. As we steamed orer the lar and, aided hy a strong flood-tide, quickly ascended the river, we next came to the pretty village of Raibandar, passing between low reedy banks friaged with cocoa-nut palms and other regetation. The distant Ghats formed a fine background to the picture, which included several white-spired English-looking churches, perched here and there on conremient knolls. The inhabitants of the district, however, composed as they are of descendants of the original natives found here by the Portuguese conquerors at the begiming of the sisteenth century, with a
subsequent slight admixture of European blood, bore no resemblance to the British type. Those whom we saw on the river wore scarcely any clothing, and paddled about in little canoes somewhat similar to those used in the South Sea Islands and Ceylon. These boats are extremely narrow, and are provided with an ontrigger in the shape of an enormons rough block of wood, comnected with the canoes by bent spars some four feet long.

After a pleasant royage of about eleven miles in tow of the steam-lannch, we were suddenly cast off at some steps leading to a small pier, in the midst of a large grove of pahntrees, and were told that we liad reached our destination. But where was Goa? We were all expecting to see ruined palaces, churches, and houses; whereas all that was visible was one massive arch and gaterray about a hundred yards distant, standing, like the Irishman's 'main gate,' in the centre of a field, with no wall on either side of it. Meaningless as it now looked, this was the celebrated Arco dos ricereys, or Arch of the Viceroys, originally built in 1599 , and composed of blocks of black granite, now partially whitewashed. Through this gateway each successive ruler of Goa passed on his way to the ancient capital ; on which occasions it was always splendidly decorated. A statue of St. Catherine, patroness of the city of Goa, occupies an upper niche, while beneath her is a figure of Vasco de Gama, with features somewhat defaced by time. The façade used to be adorned with paintings representing incidents ol the Portuguese war in the Indies; but they are now effaced by whitewash. The portico bears an inscription dedicating it to the Immaculate Conception, and commemorating the emancipation of Portugal from Spain in 1656.

By this time the lieat had become so great that, finding no carriage was forthcoming, I had almost resolved to give up the idea of risiting the wonderful old palaces and churches which we had taken so much trouble to come and see; but

Tom and the Doctor encouraged me to matie an effort, and improvised a sort of earryingedair for me. We actordingly proceeded up a stecp hot road, therogh the aforesalid ard ${ }^{\text {a }}$, to the Tiua Direita, so called because it once led direct from the Palace of the Viceroys to the Churd of Miseriondia. The name has lost its monning, for afl that now remains of the splendid palace is a prortion of the chief gateway, so small in extent that when we tried to take a doograth of it, the helmet of one of the gentlemen who chanced to stand some distance in front of the camera completely concealed it. Only 250 years ago the falace must have been the most conspicuons building in the city. At that time a large square stood in front of it to the south, surromaded ly fine houses. A nodle staircase led from this square to the principal hall of the palace, in which were hang fictures of most of the Portuguese ships which hat come to India since the time of Vasco de Gama. In an inner hall the Ticeroy, who then lived in a styte of regal splendour, received ambassadors from the Indian princes, and transacted important busmess. In Fonseca, in his historical and archeological description of the City of Goa, states that the Viceroy rarety stirred out of his palace, except to make a royal progress throngh the city. A day previous to his appearance in public, drums were beaten and trmmpets sounded, as a signal to the nollense and gentry to acompany him on the following day. Accordingly, carly in the morning about three or four hundred hidalgos and courtiers apmeared in the Trricoro do P'acu, clad in rich attire, monnted on nolde steeds with gold and silver trappings glittering with pearts and precious stones, and followed fey Euromean pages in rich livery.' The palace began to fall into decay when the city was abandoned; and although from time to time there was an idea of reparing it, the work was never serionsly undertaken. In 1820 a considerable portion of the spendid building was ordered to be knocked down ; and though the
remainder stood for some time, even so lately as up to fifty or sixty years ago, it has gradually fallen to pieces, and its ruins are now covered with regetation.

The small Church of S . Cajetan was the first place we visited after passing the entrance to the palace. It was built by some Italian friars in 1640 , and so closely adjoins the palace that some travellers have relerred to it as the Viceregal Chapel. The façade, with its Corinthian columns, and the fine cupola rising behind them, reminds one of St. Peter's at Rome in miniature. Outside the church, exposed to the full heat of the burning sun, a party of half-clad natives were scrubling with soup and water some fine full-length oil portraits of past riceroys, governors, and archbishops, which had been removed from the sacristy for this purpose. Among them were those of Vasco de Gama, and of Affonso Allunquerque, the first European conqueror of Goa. The church had not yet been opened, so we waited in a long room in the adjacent convent, through which the sea-breeze blew with delicious coohness. After a short rest we went out into a balcony and looked mith delight over a forest of tropical vegetation, to the blne river running swiftly through the trees, with the paler grey of the distant ghats beyond. When at last we gained admittance to the church, we much admired its graceful dome and the fine altar-piece in the principal chapel. Close to and in striking contrast with this grand painting stood a little group of scantily clothed natives, who had evidently taken adrantage of the opportunity of inspecting the sacred edifice which our visit afforded. The windorss of the church are made of small panes of the thin, semi-transparent inner scale of the pearl oyster, used in place of glass-a fashion still followed in many of the private houses of Goa. These shell windows, the materials for which must formerly hare been rery plentiful in the neighbourhood, admit a peculiarly soft and tender light.

From S. Cajetan we proceeded to the Cathedral of S. Caterina, one of the oldest buildings of Goa, and the only church in which daily religions service on a grand scale is now held. Albuquerque was the founder of this sacred edifice, which took seventy-five years to build, and has been well described as 'worthy of one of the principal cities of Emope.'

St. Xavier, Gou

Dr. Russell, visiting it with H.R.H. the Prince of Wales, speaks of its 'yast and nohle proportions.' We were anazed by the richness of the materials, and the artistic beanty of the elaborate carring which met the eye in every direction. The raulted ceiling, the mosaic covered side-chapels, and the high altar, near which stands the Archbishop's chair, are the
features most worthy of attention. The cathedral is, indeed, a stately pile, the nave heing over jo feet high and i40 feet long, and the total length of the building more than 270 feet. The vestries and sacristies are full of rich vestments and valuable plate, now seldom seen except by a few priests, or an occasional foreign visitor like ourselves, or, at still rarer intervals, by the general public when a grand exhibition is held, to which the faithful flock in crowds. Even the exhibitions have been discontinned of late years, for it was found that the gathering together of a large concourse of people in so mhealthy a locality led to the spread of infections disorders. The site of Old Goa is, indeed, terribly malarious. The Government having abandoned the city, it was deserted by everybody else, the finest houses, after standing empty for years, gradually falling to pieces, so that literally not one stone remains above another. Old Goa was one of the headquarters of the terrible Inquisition, and until comparatively recent days its most cruel decrees were there executed with stern and heartless rigour. The tower of the Cathedral of S. Caterina contains five bells, the largest of which, still in daily use, is the same which was formerly tolled on the occasion of the cuto-ltw-fe. It was quite thrilling to listen to its deep linell, and to think that those same tones must have fallen upon the agonised ears of the poor victims of an odions tyranny.

Close to the cathedral once stood the Palace of the Inquisition, a vast and magnificent building, the space occupied by which is now filled with dense jungle. It is the home of venomons snakes, not to be met with in any other part of the island. Probably some special shrub or herb which they like grows there and nowhere else. From the cathedral we passed across an open space to visit the Church of Bom Jesus, containing the chapel and tomb of St. Francis Xarier, and a fine altar, in the centre of which stands a colossal image of St. Ignatius of Loyola. St. Francis (who died at Sanchan, in

Malacca) rests in a crystal and silver coffin within a magnificent sarcophagus. The body, clad in the richest restments, is said to be still, after the lapse of three centuries,

Inquizibvon Stake, Gua
in a wonderful state of preservation-a fact testified to by the chief surgeon of Gon in an official report made in 1859.

Never was there a city so unlike a city, or even the remains of one, as Old Goa, unless it were Palnyra. Goa is now, in fact, only a forest of palm-trees with patches of jungle here and there, made gay by tropical flowers, such as the scarlet coral-tree, the pimelia with its bright golden convolrulus-like flowers, and scarlet and apricot-yellow euphorlias. From this mass of vegetation the spire of a church rises or the tower of some ancient building occasionally peeps forth. No other traces of its bygone splendour could be seen, whether one looked upirard from the level of the earth or downward firom the roof of one of the few buildings which still remain.

On our retum to the landing-place we found that the railway officials had lindly lent us their large steam-launch, in the cosy little calsin of which, sheltered by venetian blinds, we enjoyed our well-earned lmnch, for it was now past three o'clock, and we liad brealifasted soon after six. The seahreeze blew refreshingly as we steamed down the river, and once clear of the land the heat was not at all oppressive.

Pangaum, or Nora Goa, is a nice clean-looking little town, of some 15,000 inhabitants, at the foot of a hill covered with palm-trees. It is of comparatively recent growth ; for although the viceregal residence was transferred here from Old Goa in 1759, when a terrible epidemic lroke ont in that place, it was not until 1827 that any vigorous steps were taken to reclaim the land on which it now stands. In 1843 it was formally declared to be the capital of Portuguese India, and the Governor, the Archbishop, and other authorities and dignitaries now live there. The Causeway of Ribandar, which comects Pangamo with the city of that name, is a wonderful construction, nearly two miles in length, built in 1633 by order of the then Ticeroy.

Only the gentlemen landed during our brief stay; and they soon retumed from their stroll, having seen most of the objects of interest in the place. I had in the meantime occupied myself in taking some photographs-under somewhat difficult conditions, for the breeze was stiff and strong, and the steam-lanch was by no means steady. As soon as we retumed on board the 'Sumbeam' we were met by an extortionate demand on the part of the Portuguese officials-which, I am glad to say, was successfully resisted-..for the payment of eighty rupees, in return for the privilege of anchoring in the roads without the aid of a pilot. Then we had to bid adien to lind Mr. Norman Oliver, regretting much that time rould not admit of our seeing more of him and making the acquaintance of his wife. The auchor was soon weighed, and the 'Sumbeam' once more spread her wings to the farouring breeze, before which we sailed so quickly, and at such an angle, that the more sensitive members of the party legan to fancy it was rough, and would not come down to dimner. Later in the evening it was delightful to sit on deck and watch, by the light of the young crescent moon and the brilliant stars, the vessel racing along through the cool evening air.

In the course of the next day we passed Carwar, about fifty miles south of Goa, and one of the most interesting ports in India. Adjoining it is a lackwater, such as are often met with on the sonth-west coast of India, along which it is possible to sail for many miles in a native boat with great comfort and ease. Further south is Honabwar, whence the famous Falls of Gairsoppa, in Mysore, can easily be reached. Just now the waters of the river hami are rather low; else, I think, we should lave marde an effort to visit the falls (which have a drop of I ,ooo feet in one place) notwithstanding the shortness of the time and the difticulties of the journey, which can only be performed in rough country carls.

The wind was light all day; but the old 'Sunbeam 'ghided gracefully along, and made good progress through the hot air.

February 28 th. --The sun becomes perceptibly more powerful each day. At noon we were off Mangalore, formerly a place of considerable importance, where the British forces have stood more than one siege. Like the rest of the ports on this coast, it has been deserted by trade, and has now fallen more or less into a state of decay and ruin.

We have now resumed our usual life-at-sea labits. In the morning we go on deck at a very early loour, to enjoy the exquisite freshness of the dawn of the tropical day. Tom and the Doctor help to man the pumps, sometimes assisted by the children, who appear to like the work of scrubbing decks as much as they did in the old days of our first long voyage round the world. Then we are most of us hosed. An open-air salt-water bath is a luxury not to be appereciated anywhere so thoroughly as in these tropical climates. After an early breakfast we settle down to our several occupations -the children to lessons, till it is time for sights to be taken and catculations made: Mr. Pritchett efaborates the sketches which he lias made on shore during our recent wanderings; the Doctor makes himself generally useful, and has plenty of time to devote to this benevolent work, for at present he has hardly any patients. Later on he lindly gives the chiddren a lesson in arithmetic, while Mr. des Graz, assisted ly Prior, spends a considerable time in developing, printing, and toning the photographs which we have taken. I have always plenty to do in the way of writing, reading and general supervision. Often do I look wistlully at the many looks which I long to read, and think regretfully of the letters and journal that ought to be written; lut a good deal of time has to lee spent in less interesting, and certainly more prosaic, work. In the aftemoon there is more reating, writing, and lessons; and after tea there is a
general taking off of coats by the gentlemen, a pulting on of suitable costumes by the children, and a grand game of bide-and-seek and romps during the short twilights until the dressing-hell gives warning to prepare for dinner.

Landsmen can never know how delightful it is to be able to sit quietly on deck late in the evening, in the open air, withont any tiresome wraps, and to enjoy the soft silvery hight of the stars, scarcely dimmed hy the brighter rays of the foung moon. It is indeed a period of trantuil happiness. One is only agreeably fatigued by the excrions of the day; and one feels so soothed by the beauty and peacefulness of the scene as to be quite content to do absolutely nothing, and to rest satisfied with the mere pleasure of existence. Indeed it is only the recollection of the charms of early rising which induces any of us to leave the deck at last.

February 2gth.-Wy noon to-day we hat only run seventyfive miles. The air is still occasionally hot and oppressire. About 3 r.m. a large steamer was seen coming up astern, and with a glass we made her out, ly the white band round her fumnel, to be one of the British India Line. For some time we seemed to hold our own with her, even after the breeze fell light, almost to a calm ; and it was 9 י.m. helore she actually passed us, steamingr ahead full speed. The 'Sumberm' sails like a witch in her new suit ol light canras, and we fass the little native craft as if they were standing still, even in the lightest of breezes, for which they are specially built.

March ist.-However it may mean to go ont, March has come in like the quietest of lambs, and we could well do with a little more wind to help us on our comse.

At noon we were off Calicut, a curious old lown of nearly 50,000 inhabitants, to which belong many ancient stories and traditions. As we all know, it gives its name to that useful ant familiar material-calico. This was the first point of India touched at by Yasco de Gama nearly 400 years acou,
after his long royage from Portugat. Not far from Calicut, near Mahe, a high rock rises-one of the few places in India where sea-swallows build their edille nests. Further soutli is Tellicherry, whence the highly appreciated cardamoms of Waima are exported. The plant (Amomm repens) which produces them is not molike the ginger shurl) in appearance, bearing small lilac-coloured flowers. Cardamoms are so indispensable in all Indian cookery that great pains are taken in their cultivation.

On the other side of the river lies Beypoor, one of the terminal stations of the Southern Indian Railway, whence it is possible to proceed by rail in almost any direction. Mysore, Bangalore, and Seringapatan can be easily reached from here; and last, though not by any means least, one can travel rî Pothanore and Metapalliam to Ootacamund, that loveliest and healthiest of Southern hill stations in the Neilgherry Mountains, familiarly called 'Ooty.' This delightful place of refuge restores the enfeelled health of the European, and makes it possible for hushand and wife, parents and children, to be spared the terrible separations incidental to a career in India; for the climate of Ootacamund is as cool and invigorating as that of England.

Aroch 2md.-The distance rum at noon was 106 knots, the wind during the previous twenty-four hours having been stronger and more favourable.

We passed Cochin in the course of the day, lut not near enough to see much of it. It must be an interesting old place, dating, like Calicut, from the ninth century, or even earkier, with inland waterways to Quilon and other ports on the Malabar coast, by delightfully smooth and sheltered backwaters, always narigable for the native boats, even in the full strength of the monsoon. Trivandaram, the capital of Trasancore, is near this. The Rajah of Travancore on the occasion of the Great Exhibition of 185. sent our Queen
a most heantifully carved ivory chair, made in his own dominions, which her Majesty now uses whenever she holds a Chapter of the Order of the Garter at Windsor.

One of the bedroom stewards got a touch of sumstroke this morning, and suffered a good deal. I was, of course, rery soryy for him, but could not help, feeling rather annoyed, for it was entirely his own fanlt. The men are just like chikdren, and will not or cannot muderstand the power of the sum and the danger of exposure to it. They will run up on deck bareheaded to look at some passing object, and then are surprised that they at once get a bad headache. They are all well povided with pith lats, and amoings are spread everywhere, so that one camot feel quite as much sympathy for them as if they were sufferers in the cause of dutr.

Mrtrh 3 rh. - An alnsolutely calm and meventful day.
We nee now getting towards Tuticorin, whence it is a short journey ly rail to the spendid temples of Madura, or to Timnevelly, the great missionary station of Southern India. Tanjore with its famous rocls and its wonderful history, and Trichinopoly, with its temples and caves, are also easy of access.

We had hoped to have been able to pay a visit to the great temples on Pameshuwaran and Manaar, two of the islands forming what is linown as Adam's Britge, which partially comnect Ceylon with the mainland; int, to our disippointment, we find that they are mapproachable from the westward, and we camot get through the Pamban Passage, as its depth is but ten feet of water, whereas we draw thirteen. In order to reach the temples it would consequently be necessary for us to make the circuit of Ceylon, which would take far too much time. We shaped, therefore, as direct a course for Colombo as the light and variable breezes would admit of.

Marrh $4^{t h}$--To-day was cabmer and hotter than ever. At
noon we had run eighty-eight knots, from which time until $S$ p.m. We were in the midst of a flat oily calm, beneatly a burning sun. We were, consequently, all much relieved when, in the course of the evening, fires were lighted, awnings spread, wind-sails set, and we began to make a little air for ourselves.

Sailors are amuzingly like sheep in one respect; for if one does anything at all out of the ordinary course, it is ten to one that his shipmates feel bound to follow his example. Yesterday morning, for instance, after the cases of sunstroke of the day before, several of the crew reported themselves to the Doctor as sick, though, upon examination, he found that they were only suffering from the effects of a too-rivid imagination. Some medicine of a nauseous but otherwise innocent character was accordingly prescribed, with the satisfactory result that all the malates imatinaioss are 'Quite well, thank you, sir', this morning.
 twelre miles under sail between noon and 1I P.m. Jesterday, and ninety-eight since the began steaming.

Colombo seems to lave grown and improved since we trere here ten years ago. We were soon comfortally established in the new and splendid Oriental Hotel, and busy with letters and newspapers.

In the afternoon we did some necessary shopping beneath the welcome shade of the hotel arcades. Later, as soon as the air had Jecome a little cooler, tre drove along the seafront, called Galle Face, and enjored the delicions sea-loreeze.

Ererybody seemed to be out, driving, riding, or walking. In one spot officers and soldiers were playing cricket and football as energetically as if they had been on Woolwich Common.

We passed a horse-dealer's establishment, containing, beneath a long row of red shanties, a very decent-looking lot of ponies of various linds, some of which were being trotted out for the inspection of a circle of possible purchasers. Every bungalow seemed to be provided with one or two temnisgrounds, and all had players on them. When at last, by a charming drive, we reached the formerly forsaken-looking: Cinnamon Gardens, we found some lawn-temis grounds established in their midst, as well as a fine museum surrounded by a well-kept garden. In fact, the appearance of the whole place has heen completely changed since we last saw it.

On our way back we were overtaken by a funeral procession. First came two of the quaint little bullock-carts peculiar to Ceylon, drawn by the small oxen of the country, both carts being literally crammed full of people, apparently in the highest spirits. Then followed a long, low, open vehicle, rather like a greengrocer's van painted black. In the rear of the procession was another bullock-cart, fuller than ever of joyous mourners, and drawn by such a tiny animal that he seemed to be quite unable to keep up with his larger rivals, though urged to his utmost speed by the cries and shouts of the occupants of the cart. Altogether, anything more cheerful and less like one's ordinary conception of a funeral procession I never saw.

Our homeward road lay partly through jungle, the track crossing various small streams fringed with vegetation so tropical in character that each little river might have been a miniature Amazon. Presently we came to the Lotus Tank, full of landsome white double water-lilies on erect stems,

people sat lown to
dinner at the hotel, among whom were one or tro old friends.
When dimner was orer we all adjoumed on loard the 'Sunbeam,' and later Tom took them back to their steamer, the 'Sirocco, the largest vessel of the Messageries Maritimes Heet.

Marth 6th.-We were called at 4.30 a.m. to enable us to start by the seren o'clock train for Kandy. After a great bustle, we found ourselves at the station, muly to lee told that the time of the departure of the train had been changed to 7.35. The beauty of the journey ley rail up to Kandy in the cool air of the early morning quite compensated us for the inconvenience of so early a start. A comfortahle satoon carriage, with luxurious armchairs, had been attached to the
train for our use, besides a well-arranged refreshment car, in which civil waiters served an excellently prepared meal.

After leaving Colombo we passed through rast fields of paddy, some covered with the stublle of the recently cut rice, while others were being prepared for a new crop ly such profuse irrigation that the buffaloes seemed to be plonghing knee-deep throngh the thick, oozy soil. It was easy to understand how muhealthy must be the task of cultivating a ricefield, and what swampy and pestiferous odours must arise from the brilliant vegetation. 'Green as grass' is a feeble expression to those familiar with the dazzling verdure of a paddy-field. Grain cultivation in Ceylon does not, however, appear to be a very profitable occupation, and seems to be pursued by the natives for sentimental rather than for practical reasons. Sir C. P. Layard, who was for many years Governor of the Western Province, has stated that ' the cultiyation of paddy is the least profitable pursuit to which a native can apply himself. It is persevered in from halnit, and because the ralue ol time and labour never enters into his calculation. Besides this, agriculture is, in the opimion of a Cingalese, the most honomrable of callings.' All the grain grown in Ceylon is consumed in the island, and the supply has to be largely supplemented by imports from India and elsewhere.

After our train had ascended, almost imperceptibly, to a considerable height, we came to the Valley of Death, so called because of the enormous mortality among the workmen employed mpon this portion of the railway. Thence we passed through scenes of wondrous leanty to Rambukkana, where the train really begins to climb, and has to be drawn and pushed by two engines-one in front and one behind. It would be wearisome even to name the various types of tropical vegetation which we passed; but we thought ourselves fortunate in seeing a talipot palm in full lloom, with its magnificent spike of yellowish flowers rising some twenty feet above
a noble crown of dark ireen fan-shaped leaves. This sight is uncommon, for the trees never bloom till they are seventy or eighty years old, and then die directly.

Just before arriving at Peradeniya, the new line branches off to Nanu-oya, 125 miles from Colombo, and 5,300 feet aloore the sea-level. Nuwarra-Ellia is reached in about four hours from this, the line passing through some of the richest and lest of the tea- and quinine-growing estates-formerly co- rered with coffee plantations. The leaf fungus, tutrix - the lent of the of the Colohas ruined ters in Certhere seems prospect of this year, not but of every-

There are dred thouground under tion in Ceypared with of coffee, of tea, 650,000 and 35,000 acres namon and other bacco, cacao, and other trees and plants, are also more or less extensively grown. Sugar-cultivation has proved a failure, probably owing to the too great dampmess of the climate.

The Satintrood Bridge at Peradeniya, across the Malaweliganga, seemed quite a familiar friend ; though the old Englishi-
man who for so many years washed the sand of the river in search of gems is dead and gone.

In the afternoon I went to keep my appointment with Dr. Trimen, the present curator of the gardens, and successor to our friend Dr. Thwaites. The group of india-rubber trees outside the gate, and the palms just within the enclosure, were old acquaintances, and looked as graceful as ever. Close by stood a magnificent Amherstiu nolitis in full bloom, its great tresses of vermilion flowers spotted with yellow, hanging in gorgeous profusion among its bright glossy leaves. In Burmah these flowers are laid upon the altars in front of the images of Buddha as a sacred offering. Dr. Trimen appears to feel the greatest pride in the management of the garden, and he took much trouble to show us all there was time to see. The principal trees, sluruss, and plants have been labelled, so that he who rums may read. A good deal of regetation has also been cut down and cleared away, and the more valuable specimens of trees stand boldly out on the grassy lams. The present curator has erected a charming little summer-house, in the lorm of a Kandyan temple, in memory of Dr. 'Thwaites and his thirty successtul years of office. It stands on a small knoll, surrounded by the fragrant bushes of the jessamine-like I'lumirrin, which is also known as the temple-flower, and is regarded as sacred.

We scarcely got back in time to dress for dimer at the Pavilion, as they call the Governor's residence here. The children were tired, and went to ber. Tom, Majelle, Mr. des Graz, and I therefore started without them, and arrived punctually at eight o'clock. Lord and Lady Alerdeen were of the party, which included a good many interesting people. The table was decorated with lovely ferns, and no less than seventy$t$ wo vases of stuflowers! The effect of the servants' liveries was quaint and decidedly picturesque, and I beliere the fashion in which they are made is rery old. The smartly cut, long

swallow-tail black coat, profusely hraided with red and yellow, is worn over a snowy white cloth wrapped round the waist and reaching to the feet, and the smooth hair is liept in its place by a large circular comb at the top of the head. Out of doors, a gracefully carried umbrella is the sole protection from the sun.

March $7^{\text {th }}$ ．－The morning broke misty，foggy，and deci－ dedly cold for our early start back to Colombo．We found this change rather trying alter the heat through which we have been royaging．We lelt at eight，relying upon break－ fast in the train ；but in this hope we were disappointed，and had to content ourselves with biscuits and some rather un－ ripe fruit；for the breakfast－car is only attached to upward trains，to suit travellers from Colombo who want to make the trip to Nuwarra－Ellia or to Kandy and back in one day． The scenery was so lovely，however，that there was plenty to occupy and distract our minds，and we were able to do all the more justice to our good lunch when we reached the comfortable Gralle Face Hotel．

There was a great deal of business still to be done at Colombo，including the engagement of a new under－cook，the purchase of additional cool clothing for the crew，and the lay－ ing in ol fresh stores and pro－ visions．It was therefore not until the evening that we were able to start upon a little expe－ dition，I in a jinrikisha，Tom on foot，followed by another jimrikisha，into which，to the great amusement of the group of lookers－on，he insisted on putting our interpreter，or ＇English－speak－man，＇as he calls himself．

There is always，to my mind，something supremely hudicrous in the sight of a lalf－naked individual trudg－ ing gaily along under an umbrella in pouring rain．His clothes camot be spoiled，for he wears none；and one
 combining utility with elegance, and Cingalese We.rpous when the shower is orer it is throm away. I have also seen these leaves used as sunshades, but they do not answer so well in this capacity, for they wither directly and become limp and drooping. We had a pleasant stroll through the town and outskirts, exploring some lovely little nooks and corners full of tropical foliagre. Colomlonsecms to be progressing, and to have henefited greatly by the railway

We went to the station to meet the train from NuwarraEllia, by which the children were expected to arrive, but, as the time-tables have just been altered, we found oursches too carly. The interval was pleasantly filled, howerer, by an instructive and interesting little chat with the traffic-manager. At last the train appeared, and with it the children, who expressed great delight at the procession of six real Japanese jinrikishas which we had organised to convey them and the rest of the party from the station to the hotel.

Huring the day we had heard that sereral old triends happened to lie at Colombo, so we conrened them all to dinner. Their number included Mr. Machean and Captain Middleton, of the old 93rd, both of whom had been married since we last met them, and Colonel Carey, a Rughy friend of Tom's, now commanding the Engineers liere.

We have had great difficulty to-day in obtaining possession of a box sent on to us from Bombar. I left orders yesterday that it was to be obtained from the shipping-agents this morning, but it was only after an infinity of trouble to ourselves and to the people on shore, who had locked up their offices and gone home, that we were alle to get hold of it this evening. At last everything and everybody were collected on board; our usual parting gifts of books and newspapers to barracks, hospitals, and schools were sent ashore, and we steamed slowly out of the harlour and round the breakwater. Then 'Full speed ahead' was the order given, and once more

Point de Galle
we left the lights and luxuries of land behind us and sailed forth into the soft tropic twilight.

Tuesduy, Murch 8th.-It was I.io a.m. as we passed the
lighthouse. I stayed on deck until the land seemed to be swallowed up in the darkness; but when I came up again at 6 a.m. we were still ruming along the coast, near enough to see some of its beanties, though not so close as to make it possible to apreciate the exquisite loveliness of the Bay of Galle. Once the principal port of call for all the most important lines of steamers, the town of Galle is now comparatively deserter, and the charms of the neighoming comutry are minnown to the modern traveller. The dillialties of landing there were ahways great during the monsom perion, and more facilities having been afforded at Colombo by the construction of Sir John Coode's great breakwater, all the steamers now make use of that port to take in water, coal, and provisions.

At noon we han run 95 miles, and Trincomalee was $24 t$ miles tlistant. At ro p.as. we passed inside the Great Bass Rock, and afterwards the smaller Bass Rock.

Wertnesthy, March gth.-At noon to-day $18 t$ miles had been made, and Trincomalee is only now twenty miles ahead. We hat passed Batticaloa, the calital of one of the divisions of the island, and early in the moming saw the celebrated rock called 'Westminster Alber,' which is curiously like that grand old pile, especially when the two pimacles are seen from a distance. As rou pass it to the northward the resemblance gradually becomes lost.

The sun was sinking fast when we shaned our course for the entrance to the harbour of Trincomalee. I was on the topgallant forecastle with Tom, and mosi itelightiul it was in that airy position. A fisherman in a curions little catamaran boat offered his services as pilot; and though they were not required we stopped, intending to ask him to come on board and have a chat; but he was lazy with the oars, and before he had come alongside our patience was exhausted. The moon now began to show her light, while the star's iwinklal orerhead ; and the two lighthouses-one on either hamd-scnt
forth rays which glistened on the calm surface of the water. I half regretted the departure of the daylight, for I should have liked to have seen more plainly the entrance to this wonderful harbour, pronounced by Nelson to be one of the finest in the world; but, on the other hand, the ex(quisite beauty of the scene made up for its want of distinctness. The glorious full moon, gaining power, shone into every

creek and cranny, and beamed brilliantly over the water as we steamed ahead, until at last we dropped anchor off the dockyard of Trincomalee. Just previously, from the little fort above, had come lond shouts of 'Sunbeam, ahoy!' and then many hearty cheers burst from the throats of the artillerymen and engineers who are puartered there.

After dimer Tom and I went for a row in the 'Flash,'
and explored the harbour by moonlight. There was a sool deal of singing at a row of cottages ashore, where, I suppose, the dockyard labourers live. Even the workshops looked quite romantic, covered as their rough walls were by palms, creepers, and other tropical regetation. The went on towards the Admiral's honse, passing through the submarine mining flotilla, which looked singularly ont of place among these picturesque surromalings. The night was alsolutely perfect; the moonlight on the water, the distant momntains, the near forts, and the white sandy beach, all making up an ideal picture of tropical beauty and repose.

Shortly after we had come to an anchor, Mr. Black, the assistant naval storelieeper, arrived on brart, lninging with him kind letters from Sir Frederick Richards, the commander-in-chief of the East India station, offering us his honse and garden whilst we remain here. The 'Tumma,' which bronght these letters, left four days ago ; and the 'Iacechante,' Sir Frederick's Hayship, is not expected for a week; so that we have just missed lroth, greatly to our disappointment. Mr. Black kindly promises to meet us again tormorrow, and to pilot us to the fimons hot springs at Kanniya and to the alligator tank.

March ioh.-At 6 A.n. We all went on shore, amb were met by Mr. Black with sumdry little gharies and tum-tums, into which we soon packed-all except Tom, who remained behind to inspect the dockyard. The harhour looked finer in some ways, though perhaps not so poetic as hy monlight. The conld see more of the landscape; and as we drove along a good road shirting the bay the peeps through the foliage were lorely. After passing the Almiral's house we drove, throngh a straggling village embosomed in trees, to the post-office, where we deposited a mail which, lo judge from the astonished looks of the officials, must have been much larger than they usually receive. It certainly was
somewhat voluminous, consisting as it did of letters, hooks, manuscripts, legal documents, and newspapers. It would have to be carried some eighty miles by runners to reach the mail-coach, and then travel another hundred miles before being deposited in the train ; so that I fear it will give some trouble. The poor letter-carriers are bound to take any parcel weighing eleven pounds. I suppose an extra man will have to be employed for our mail, but this cannot be a serious matter where wages are so cheap.

From the post-office our way lay through a dense jungle, but still along a good road, where many birds of brilliant plumage and sweet song flew gaily before us or perched on the telegraph wires alongside. Jungle-cock ran in and oud across the road. They are rather good-looking birds, something like a very' gamey' domestic fowl, with a fine upstanding tail.

Our progress was greatly delayed by the eccentricities
of Mr. Black's pony. He always stond still when we met anything, stopping so abruptly as almost to shoot us out of the gharry. Then, having once hatled, he refused to more on again withont much urging and coaxing. Before going down hill he planted his feet onstinately on the ground, declining to procesd; and at the bottom of an ascest he tumed short romid. If a lird flew suddenly out of the jungle he jumped over into the opposite ditch, and many times morrly, thongh never quite, upset us. After these performances, I was not surprised to hear that this pony had never been in harness before.

At last we reached the hot springs, seven in nomber, where we found a temple and other little louldings close he. The water bubbles up through square and round holes, and was so hot ( $115^{\circ}$ ) that it was ahost impossible to bear one's hand in it; but we caught tro little turtles swimming gaily about. The curions "seathorses," which cary their rome in their mouths, are said to live in the streams rumning from the springs.

While waiting for the rest of the party to arrive I took several photograplis. We sent a mative op a tree for fresh cocoa-muts, and, having climbed in the orthodox manner, with feet tied together, he threw us down nuts, green and smooth, full of delicionsly cool clear milk, with a thick creamy coating inside, most grateful to the palate.

After taking more photographs, some of the party set out for the alligator tank, where the prolability of seeing any alligators seemed so doubtful, that, as a long and fatiguing walk was much more certain, I thought it better to undertake, instead of accompanying them, to drive a pair of jibling ponies back to Trincomalee.

On the way back we saw an opening made in the dense jungle by the passage of an elephant, which had evidently crushod throngh into the road since we had passed. Wild elephants
are very numerous hereabouts, and a hundred were lilled not long since by one sportsman in a comparatively short time. Another limiter made great preparations for sport, and spent a considerable time in the neighbourhood waiting his opportonity, but, after failing to get a single shot, determined to return by bullock-cart and coach to Kandy. At one of the rest-houses he was cleaning and putting away his rifle, when some excited coolies rushed in and begged him to kill a rogueelephant which they had canght sight of quietly walking down the road. The sportsman accordingly took up his position behind a tree, and killed the huge beast quite easily. The carcase remained in the road for several weeks, poisoning the atmosphere and rendering the rest-house almost uminhalnitable, until at last an otficial of rank, passing that way, gare orders for it to lee liunt, which was promptly done by the inhalitants of the neighbourhood, who had nearly arrived at the conclusion that the possible attacks of a live elephan' were a less serions maiter than the certain ill-effects of the proximity of a dead animal. To me, inderendently of the sanitary aspect of the case, it appears a sad pity and an altogether wasteful proceeding to massacre so powerful a beast, with such capabilities of usefunness, as an elephant, simply for the sake of amusement; for neither hide, feet, tail, nor lones are of much, if of any, ralue, and it would surely be better to catch and tame the poor creatures if possille.

Arrired on board the yacht, 1 found Tom just returned from a long examination of the dockyard and naval establishment. The remainder of the party appeared later on, all rather exhansted, and disappointed at not haring seen any alligators. They were, however, laden with lovely lotus-like water-lilies, collected during a pleasant little paddle on the tank in a very leaky canoe.

During the morning we had many visitors on board, all
profinse in lind offers of hospitality, and desirous of doing evergthing to make our hicf stay agreeable. The children went back with the hadies to spend the afternoon at the fort, while 'Ton and Mabelle landed to play lawn-temis.

Abont fire o'clock Mayor Nash called and took ns for a drive on the heights, from which there was a fine view arross the bay and harbour beneath us. This island originally belonged to the Dutch, ly whom it was ceded to us; and it has since been used as a club and recreation-wronnd for the officers. Several pleasant bungalows have been estal)hished, and a good liceakiast, lunch, or even dinner, can be obtained at a moment's notice. The old accomet-looks liept by those in charge of the mess bungalow are still preserved, and many a now celebrated name may be seen enterd therein.

We rent to Mr. Milleit's house to see what he called a tame cheetah, hut which was really a wild panther-a handsome little beast, who became greatly excited when the dogs appeared on the scene. We also saw a tiny crocodile, only a month old, in an earthenware pan, which smapped and hissed and flapped his tail, and was altogether as angry as any creature of his diminutive size could well be, making it quite clear that only the power-not the will- 10 eat us all up) was wanting. There are many crocodiles in these lakes and streams, and they occasionally cary incautious people off, especially the women who go to the tanks to till their water-jars.

Mr. Millett had also yuite a large collection of elcphamts' heads, tails, and feet-the spoils of a recent shooting experdition. These trof hies seemed to give one a better idea of the immense size of the elephant than the sight of the animal itsell. It was most interesting to be able to handle and to examine closely their great bones, though I felt sad to see the remains of so many huge beasts sacrificed just for the love of killing something. They had not even been tuskers, so that, unless their heads and feet were used for mere decorations, I
do not see that their slaughter could have answered any useful end.

We next drove to the Admiral's house-a charmingly-placed dwelling, with one end for each monsoon (south-west from April to September, north-east from November to February). A well-cared-for garden encircles it, linll of valuable plants and flowers; and the view over the bay is wide and lovely. We went racks, and then climbed, up to station, below new fort is made

and on to reach the famons Sami Rock, which rises sheer from the sea, and is a sacred spot for Hindoos, who have come here by thousands to worship for many centuries. Behind the rock stands a small monument, erected in memory of a young Portnguese lady, who, having seen her lover's ship
leave the hardour and disappear below the horizon, threw herself in despair from the cliff.

The sun had now set, and the night was calm and brilliant; but so powerful had been the sm's rays that the rocks lount our feet as we walked, and made it impossible to sit dorm. We retumed to lower levels much more quickly than we had ascended; lant I felt rery tired before we got back to the gharries, and was only too glad to 'rest and be thankful' motil the others arrived and were ready to start. They had had a delightful afternoon, and had canght several walking-fish (a lind of perch), after seeing them both walk and swim; besides gathering more lotus-flowers, and enjoying several good games at lawn-temis.

The drive to the boats, behind Major Nash's fast-trotting pons, was all too short, and the time lor the inevitable farewells came but too quickly. Steam was up when we got on board, and in a few minntes we were leaving this beatiful harlour lehind us, exactly twenty-four hours alter we had entered it, and under almost precisely the same conditions of wind and weather. Trincomalee is certainly a noble harbour, lout Tom is strongly of opinion that it would bee more valuable in the hands of the Indian Government than under the Admiralty.

Friduy, Murrh IIth.-We had intended to go south of the Andaman Istands, so as to be able to call at Port Blair, the convict station where poor Lord Mayo was assassinated by the conrict Shere Ali during his official visit in 1872. The sailing-directions, however, gave such a terrible account of the malarious climate of the whole group of islands, the sarage character of the inhobitants, and the size and nomber of the many venomous reptiles, that we reluctantly decided to continue our voyage straight to Burmah without stopping. We accordingly passed to the northward of the Andaman gromp, making what is called 'The Cocos' our first land-fill.

At noon we had steamed 140 miles, and were in lat. $9^{\circ} 44^{\prime} \mathrm{N}$. and long. $83^{\circ} 3^{\prime}$ E., Great Coco being 607 miles distant.

Suturday, March 12th.-Another calm day, busily occupied in reading and writing. At noon we had steamed 184 miles, and were 47 I miles distant from Great Coco, in lat. $10^{\circ} 49^{\prime} \mathrm{N}$. and long. $87^{\circ} 1^{\prime}$ E.

Sunduy, March 13th.-We had the Litany at 11.30, and evening service later; with most successful Chants, the result of much practising yesterday and on Friday. At noon we had

steamed 195 miles, and were in lat. $12^{\circ} 16^{\prime} \mathrm{N}$. and long. $88^{\circ}$ $55^{\prime}$ E. Great Coco distant 278 miles.

Monday, March 14th.-There was a nice breeze in the early morning, and sails were accordingly set. At 9 a.m. we ceased steaming, and proceeded under sail alone. At noon we had rum 181 miles, and were distant 97 miles from Great Coco.

Tueslday, Murch I 5th.--Little Coco was sighted at daylight. Later on we saw all the other islands of the Preparis group in succession, and were able to congratulate ourselves on haring made a good land-fall. At noon we had sailed 120 miles,
and were in lat. $14^{\circ} 5^{\prime} \mathrm{N}$. and tong. $93^{\circ} 29^{\prime}$ E., the Krisha Shoat being distant 150 mites.

In the evening we had onr first matical entertanment since we have all been on board together. It proved a real strecess, and appeared to afford great enjoyment to all, the credit heing mostly due to Mahelle and the Doctor, who took an immense deal of trouble to make everything go off properly, and were well rewarded by the miversal apprectation of their exertions. I am sure that these ammements do good in relieving the mavoidable tedium and monotony of a long voyage.

Wralnestay, March I 6 th. - Somdings were taken at frequent intervals throughont the morning, for we were uncertain as to the strength of the currents, and could not see far ahead, as the sliy was both overcast and misty. Abont noon Tom got an olservation, and found that we were in lat. $15^{\circ} 28^{\prime}$ N. and long. $95^{\circ} 40^{\prime}$ E., having saited 40 miles during the past twenty-fom hours. The Krisha Shoal was then about ten mites to the N.W.

Torrards five o'clock I was reading quietly on deck, when I was startled by an appatting shriek, fottowed ly a good deat of commotion forward. A moment afterwards I saw pour Pitt bleeding protusely from his right hand. Having sent for the Doctor and some ice, I got hold of the wrist, and bound it up as best I coutd mutit the Doctor appeared, who then proceeded with his instruments to tie the arteries property and to sew up the wounds. White opening some soda-water for the children one of the bottles burst in the poor man's hand, cutting five arteries and mearly blowing off the top of his second finger. It was a ghastly business altogether, and atthough he bore it bravely he coutd not help crying out occasionally. 1 stoor it all pretly well till just at the end, and then fainted, which was stupid; but sitting in the sun in a cramped position, with such sights and sounds
was rather trying. It was a comfort to know that I was able to be of some use at first.

At 7.45 p.n. we made Point Baragu Light, and at io p.m. sail was shortened, for by this time we were rushing along before a strong, fair wind, and did not quite know how far it might carry us by daylight. After dark the sea was brilliantly lit up by millions of minute nantilidx, and from time to time we passed through shoals of large medusæ, increasing and decreasing the light which they emitted as they opened or closed their feelers, to propel themselves through the water. They looked like myriads of incandescent lamps floating just helow the surface of the water and illuminating everything as they passed with I do not know how many thousand or million candle-power. The effect was indeed fairylike, and one felt reluctant to go below so long as there was even the faintest chance of seeing another blazing shoal.

Fortunately, the description of the China Bakeer pilot-brig given in the sailing directions is rery precise and clear, or a wretched little native boat, on the look-out for a job, might have imposed herself upon us as the genuine cralt, and have got us into serious trouble. The shoals hereabouts are numerous and the water generally is shallow. This native craft was rigged very much like an ordinary pilot-loat, and Hew a huge ensign at the main montil dark, besides burning enough blue lights, flash-lights, and flare-liglats afterwards to draw any ship from her safe course. It would therefore not have been surprising if we lad alloned ourselves to be misled by her. We heard afterwards that only a few days ago she nearly led H.M.S. 'Jumna' on to a dangerous shoal.

RANGOON.

Thursiday, March izth.-The govermment pilot came on loard at 6 a.m., and we at once got up the anchor and proceeded under steam $u p$ the branch of the Irrawady called the Rangoon River, leading to the town of that mame. Its banks are flat, low, and densely wooded. The Great Pagodia is seen shortly after entering the mouth, and at Monkey Point the river divides into two portions (one of which is
only a creek, while the other is the main branch, which passes Rangoon). Later on the factories, wharves, offices, public buildings and houses of the city become risible in quick succession.

Little more than thirty years ago Rangoon consisted of a mere stramp, with a ferr mat lints mounted on wooden piles, and surronded by a $\log$ stockade and fosse. Now it is a city of 200,000 inhabitants, the terminus of a railway, and almost rivals Bombay in beauty and extent. It possesses fine palaces, public offices, and pagodas; warehouses, schools, hospitals, lovely gardens and lakes, excellent roads, and shady promenades.

We arrived opposite the town alout half-past ten, passing throngh quite a crorrd of shipping, amongst which were several fine clippers and steamers, bound to all parts of the work. The rice season is now at its height, and everybody is working.

his hardest. So great is the competition, that some merchants complain that they have made no profit since the time
of the great Indian famines ol 1874 and 1877 ，the only suncess ful traders now being the owners of mills，who derive their gains from merely crushing rice．

Early in the afternoon，Mr．Symen，Secrelary to the Chide Commissioncr，came on board，bringing a kind note from Mrs． Crossthmaite，the wife of the Chief Commissioner（who is away in Mindalay ，asking us all to go and stay at Government Honse dming our visit to Rangron．We declined this proffered kindness，lut accepted an invitation to dinnel．Several other visitors came on loard in the course of the aftermonn，and at fire oclock we landed and went for a drive．

Important as are the commercial aspects of the place，it is not these which interest and arrest the attention of the stranger，but rather what is ohd，quaint，and perhaps more or less effete．The appearance of the people thomselres， to begin with，is most pricturespue．Nearly all the men are naked to the waist，or wear a small white open lines jacket， with a rolmminous $f^{\prime \prime \prime}$ tso womed dightly round their lains and grathered into a great bundle or knot in front．Their lons hair is beantilully trimmed，plaited，and oiled，and their ornssy locks are protected from the smo by an viled－sill mondrella． The women wear much the same costume，except that the trmieri which replaces the phtso is gayer in colon and nore gracelully put on．There seems to be a strong family likeness between our own Scotch kilts，the Malay sarmogs，the Bummese putsos and tamieris，and the Punjaulee tumghis．They are evidently the outcome of the first effort of a savade people to clothe themselves，and consist merely of ohbong or spuare ummade pieces of cloth wound round the hody in a shiphtly differing fashion．Some people proless to be able to recog－ nise the Bruce and Stewart phads in the patterns of the sarongs．Stripes and sifuares are comparatively cheap，while anything with a curved or randyked pattem is expensive，be－ canse for each curved or randyked line a special instrument
 of langoti, by which name the same garment is called in India. The rain-
hats are also remarkable, being sufficiently large to enable the wearer to dispense with an umbrella, though an oiled-paper parasol is generally carried in case of a shower.

But it was not only the people who interested me. There were the great pagodas, like hage hand-bells, gilded and decorated in various styles, with curious little htees, or gilt crowns, at the top, ornamented with rubies and emeralds. On the extreme summit, in the place of honour, is almost invariably
fixed an English soda-water botlle, while the minor positions of importance are occupied by tonic-water bottles, which are of the same shape, but of a hlue colour. The still more inferior places are crowned loy dark green square-shouldered seltzerwater bottles. It seems a cmious idea that a crom, which is

not only a real work of art, but is made of rich materials, and worth 30,000 . sterling, alter having been placed with
much pomp and ceremony on the top of the finest pagoda in Burmah (Shway Dagohn, the gilded spire of which rises as high as St. Panl's Cathedral), should be surmomited and surrounded ly the most commonplace articles of the conquering 'barlarian hordes.'

Presently we passed the funeral car of a Phoongyee, or Buddhist priest a marvellous structure, reminding one of the Juggernant cars of India. The funeral of a Phoongyee is always made the occasion of a great function. The body is embalmed and placed on one of these huge cars; and the people from the surrounding villages flock to the ceremony, bringing cartloads of fireworks, for the manufacture of which the Burmese are celebrated. Great rivalry arises as to which village shall be fortunate enongh, throngh its representative, to set the gorgeons canopy on fire, and therely release the good man's departed spirit and send it straight to heaven without any further transmigration or trouble. This happy consummation is supposed to occur directly the large funeral pile, which is always of highly inflammahle materials, takes fire. The result is that many accidents occur, besides a great deal of heartburning and loss of life; for sometimes a whole quarter of the town is set on fire and much property destroyed in these contests.

It is the custom, when a Phoongyee of the highest rank dies, to preserve the body in lioney mutil the funeral car has been built, which is generally a matter of some weeks. The body of the car is surmonted by a sort of baldacchino, decorated with blue and green bottles and pieces of broken glass or porcelain. When all is ready, the body, attired in a common yellow robe (during life the robes are of silk, satin, or relvet, or cotton, according to the priest's rank), is placed on the car; women then seize the ropes attached to the front of the cumbrous relicle, and men those behind. After a prolonged struggle, supposed to typify the conflict between
good and eril spirits, the women gain the day, and the car proceeds on its way to the fumeral pile, upon which the body is placed, and which is finally set on fire by lugge rockets.

The arenue leading to the Shway Dagohu Pagoda is guarded at the entrance dy two enomous statues of bylus, or monsters, erected to propitiate the evil spirits; bylus and nots

being to the Burmese very much what demons and devils are to us. The riew of the pagoda from the arenue is indeed
wonderful. The great gilt dome, with its brilliant golden lete, grows and grows and mutil its enormous bulk is a vast bell-shaped erection, with a pointed handle of increases upon the rision, at last fully realised. Fancy

Pangoon Boat (stern)
solid gold, rising to nearly the height of the cross on the top of St. Paul's, surrounded by mumerous smaller pagodas and dagolas, bell-temples, tombs, and rest-houses, some much dilapidated-it leing considered more meritorious to build a new temple than to repair an old one. Shway Dagohu itself stands on a planted terrace, raised upon a rocky platform, and approached by a hundred steps. A writer of about forty years ago says:

- The golden temple of the idol may challenge competition, in point of beanty, with any other of its class in India. It is composed of teak-wood on a solid brick foundation, and indefatigable pains are displayed in the profusion of rich carved work which adorns it. The whole is one mass of the
richest gilding, with the exception of the three roofs, which have a silvery appearance. A plank of a deep red colour separates the goll and silver, with the hapry effect of relieving them.
'All romd the principal pagoda are smaller temples, richly gilt and furnished with images of Gautama, whose nnmeaning smile meets you in every direction, the sight of which, accompanied by the constant tinkling of the immuneralle bells hung on the top of each pagoda, combines with the stilhess

Ragegoon Boat (stem)
and deserted appearance of the place to produce an impression on the mind not speedily to be effaced.' Close by live a hondred and fifty families, called 'slaves of the pagoda,' to whose care the edifice is entrusted.

On the walls of one of the rest-honses were some welldrawn frescoes illustrating incidents in the life of Gantama, and statnes of all dimensions, from the size of one's hand to something guite colossal. These figures are always represented in one of three positions-either standing, sitting, or lying-the features of each wearing exactly the same amialle but racant expression, and the hands and feet being invariably turned in the same direction. The carvings over the porch of the principal temple outside the strongly fortified pagoda
represent its storming and capture by the English, under General Godwin, in I852. The naval officers who are depicted carry telescopes of somewhat inconvenient length for practical purposes; lut the uniforms of the bluejackets, soldiers, and marines are fairly correct, and alt the figures are carved with great spirit.

The pagoda is supposed to have heen commenced 588 years b.c., in order to enshrine some hairs of Buddha and the bathing-gorm of another holy man who lived two thonsand years before him. The building was enlarged from time to time (especially when eight hairs from Gautama's beard were added to the sacred coltection), and is now a solid mass of bricks, arranged in rows of stejes, with three shrines to hold the precious relics, erected at various heights. The carved teak with which it is corered is solidly gilt from top to bottom, and this process costs 30,000 . each time it is repeated. The new hitee was sent down from Mandalay in 1882, and was received with the greatest pomp and ceremony by all the officials, both European and Burmese.

To wander round the top platform or courtyard ontside the pagoda in the twilight and listen to the bells was an extraordinary experience for all of us. The big Burmese bells are celebrated for their tone, especially those in the temples. The smaller bells are also good, as are the triangular gongs, called, from their shape, stirrup-gongs. The little bells which are hung on the hetecs at the tops of the varions fimacles surrounding the soda-water hottles have long clappers, easily moved by the wind; and the sound of these varions bells and gongs borne on the evening breeze is harmonious in the extreme.

The King of Siam has constructed a fine rest-house just outside the gates, tor the use of the people of lis nation, the pagoda itself being open to all peoples, kingdoms, and races. A private individual also lyuilt a magnificent wooden
rest-house, at the cost of a lac of rupees, just before Lord Ripon visited Rangoon. This rirtuous act was supposed to assure him on his death immediate nirroma, or transition to Paradise without undergoing the process of transmigration or the ordeal of Purgatory. As a mark of loyalty and admiration, the founder transferred not only the rest-house, but all the eternal privileges which he had gained by building it, to His Excellency; in recognition of his endeavours to gain for the matives of India a larger amount of liberty and greater privileges.

Mr. Hodgkinson, the assistant Commissioner, met us at the prgoda, and told us all he knew about it in the most interesting way. The drive back to Rangoon through the Dalhousie Park and Gardens, once the appanage of a royal palace, was perfectly delightful. It was rather late, and there was consequently a great rush to dress on board and get back to shore in time to dine with Mrs. Crossthwaite at Goremment House, three miles from the landing-phace. It is a large roomy bungalow with a big rerandah, surrounded by trees.

Moulmein

Mrs. Crossthwaite, her daughter, Mr. Hodgkinson, Mr. Symes, Tom, Mabelle, Mr. des Graz, and myself formed the party. We had a very pleasant evening,

us to see a timber-yard, where elephants are extensively used. It was a wonderful exhibition of strength, patience, and dexterity. The docile creatures lift, roll, and push the logs of timber to any part of the yard. They pile it up into stacks high above their heads, seizing one end of a $\log$ with their tronk, placing it on the pile of timber, and then taking the other end of the $\log$ and pushing it forward, finally placing it on their heads, and sending it into its place. They work undisturbed amid the buzz of circular saws and machinery, where it would seem almost impossible for animals of such hage proportions to escape injury. They carry their intelligence to the point of rigidly enforcing the rights of labour.

Nothing will persuade an elephant to do a stroke of work, after he has heard the workmen's dimer-bell, during the hour of mid-day rest to which he rightly considers himself entitled. Their mental powers seem, indeed, to be very nearly on a level with those of the human workmen, with whose efforts their own are combined. No less than two thousand elephants were formerly employed in the yard of the Bombay and Burmah

Company. Steam machinery is now rapidly superseding elephants, for each animal requires at least three men to look after him. We quitted the Bombay and Burmah Trading Company's teak-yard, most grateful to Mr. Jones, the manager, for his kind reception. Then our party divided, some going to see the pagoda, and others to see the rice-mills. At this season of the year the mill-hands are at work night and day, while from November to February the mills are as a rule closed. In the establishment which we visited a hundred tons of rice are turned out every twelve hours, several processes having to he gone through before the 'paddy' is converted into 'white rice' of the first quality.

While rice is the main element in the trade of Rangoon, teak is the principal article at Morlmein. The finest teak forests are to be found in Northern Burmal. The tree does not flourish south of the 16 th degree of latitude.

Returned on board to breakfast, to which Dr. and Mrs. Pedley came. Busy morning with letters and callers. Among the latter were Lord and Lady Stafford, on their way to join the 'Kilwa,' in which they proceed to Moulmein and Singapore. Captain Fanshawe also called, and Mr. Symes and Mr. Hodgkinson came to lunch. Some Burmese curiosity-vendors paid us a risit in the alternoon, and we made some purcliases, chiefly of silver and gongs. Posted our budget of letters and sent off telegrams in the evening, and sailed from Rangoon at 11 P.in.

Suturday，Murch igth．－Arrived off the Salwen River about I p．ar．，but found that the tide did not suit for going up to Moulmein．We therefore had to anchor until the next morn－ ing．Const pretty，undulating，and corered with jungle．At five o＇clock we landed and went to the water pargoda at Point Amherst－a curions wooden structure，held sacred by the Buddhists．Pilgrimages are amually made to this spot from all parts of Bumah and Siam，and are the oceasion of vast gatherings of people，who live and sleepentirely in the open air． There is a small native village close $b y$ ，and also a post－oftice， telegraph－office，and pilot station；while in the neighbourhood are many of the summer－dwellings of the Piangoun and Mont－ mein merchants．

Sumbly，Nark 2Oth．－Steam up early．At Io A．m．we started to ascend the river to Monlmein．Passed the＂Kilwa＂ coming down，and arrived about one o＇dock．Nonlmein is
admirably situated on a range of hills, rising to a considerable elevation on the lelt bank of the Salwen. The torm is embosomed in trees, and pagodas and slurines occupy every prominent position. The population consists largely of foreigners, Chinese and Hindoos lorming a large proportion of the aggregate number of 50,000 . The narigation from the sea to Monmein up the Salwen is far more difficult than the passage up to Ramgoon. The Salmen is one of the great rivers of Asia. Its upper waters have never yet heen reached by European trarellers. Aloont halt-past four we landed and drove $u$ to Salwen Lodge, where we had tea with Colonel and Mrs. Plant. Afterwards to chureh, which was rery hot and full of mosquitoes.

Momduy, March 2ist.-Landed early, and went to see the jail and another timber-yard where elephants are employed. At the jail a good deal of wood-carring is done, in addition to basket-making and carpentering. Retnrned to the yacht to breakfast, and received more risitors, inchuding Mr. Menhenaick, the English clergyman here. Colonel and Miss. Plant came to tea, and we aftermards landed and went to a lammtemnis party and to dimner at Salwen Lodge.

Tucsilay, March azul.—Started very early to see the caves, about eight miles from Montmein. The smaller of the two contains a large number of sacred images, while the other is of rast dimensions. These cares are situated in a sort of cliff, rising abruptly from the plain. The lighting had been specially arranged for us by the kindness of Captain Dodd.

A large portion of Burmah is still minhabited. Much larger in area, it has not one-fitth of the population of France. But the increase is immensely rapid. Between 1871 and 1881 it was at the rate of 34 per cent.

The inferiority of Burmah in respect of population, notwithstanding the superior fertility of the soil, is to be traced
to the physical geography of the comntry. The great rivers of India How east or west. The great rivers of the Burmese feninsula flow from north to south. The fopulation of India coutd readily expand without materiat change of ctimate. In Coctuin China navigation down the valters of the great rivers involves changes of temperature and habit such as homan nature is not senerally able to endure.

At an earty hour we found the deck, as usual when we are about to leave a port, cumbered by an inconvenient crowd of unrelcome risitors, consisting in the present instance of dhohis, ghary-wallahs, hotel feople, and loafers and idters generatly, alt of whom we at once proceeded to get rid of

Entrance to Cares, Iloulmein

Feryy at Inrcebutin
friends on shore, who had kindly sent us parting presents of truit, jams, curries, curios, and the most lovely orchids, the latter in such profusion that they were suspended all along the hoom, cansing the quarter-deck to look more like one of Mr . Bull's orchid exhibitions than part of a vessel. We photographed some of them with greatsuccess, and with our gods from the caves in the background, they will make an effective picture.
The clothes from the wash had arrived on board, for a wonder, though the much-needed ice had not. It was, however, impossible to wait for it, and accordingly at 12.45 we not up the port-anchor, and at 1.30 the starboard-anchor, and proceeded down the river, taking several instantaneous photographs er ronte. About four o'clock we met the 'Ramgonn' coming up. She is a powerful paddle-wheel steamer, carrying the mails, and doing the distance of 1 Io miles between Rangoon and Moulmein, or cire rersi, in all states of the tide-which sometimes runs seren knots-in eleren hours. Her decks were crowded with passengers, mostly natives. In the hors was a group of Phoongyees in their yellow robes.

The pilot-boat met us at Point Amherst, with Tab on board,
bringing more froit and orehids. The had arived at Tangoon on the 2oth, and had left there this morning, after laving had a real grood time of it with Colonel Euan Smith and the Manchester liegiment, his only regret heing that he had not killed a tiger. We Fared adienx to the skipper, pointerl the facht's head to the sonthward, mate sail, ant, as soon as it was cool enough, lowered the fimnel and set the mainsail.

Wrolmoslay, Marbli 23ml. - A pleasant but rery shy breeze, which frequently olliged us to tack. At noon we laul made good 60 miles moler stean, and 40 under sail, Singapore being distant 1,050 miles. Lat. $15^{\circ} 33^{\prime} \mathrm{N}$. ; long. $97^{\circ} \mathrm{I} 3^{\prime} \mathrm{E}$.

Thurshlay, Mach 24th.-The twelfth anniversary of Baby's birtliday. She was delighted with the presents whicle had already leen collected for her at various 1 daces, and with the promise of others.

A hot calm day. TVe had run ion miles since noon yesterday, and were in lat. $14^{\circ} 32^{\prime} \mathrm{N} . ; \operatorname{long} 97^{\circ} 27^{\prime} \mathrm{E}$. At 3 P.m. we raised the fommel, and at 4 began to steam.

In the evening we had our second natical entertainment in honour of the day. Muriel's 'first appearance" as 'Little Buttercap, in the old-fashioned costume of a Portsmouth Jomboat woman, consisting of a bue gown, reat shaml, and bonnet of antigue shape, was greeter with vociferous applanse, and it was only ont of deference to her feelings of mingled modesty and fatigue (for it was riry loot and airless helow in the crowded 'assembly room') that her song was not rapturously encored. The evening's entertaimment was bronght to a close in the orthodos mamer ly the drinking of liealths and the expression of good wishes for all friends, absent or present.

Fridny, Mard 25 th. - A fine breeze sprang up at i A.m. At 7.30 we ceased steaming, and at io A.m. lowered the fumel.

At noon we had run 138 miles muder stean and 32 moder sail, Singapore being 837 miles distant. Position, lat. $11^{\circ} 41^{\prime} \mathrm{N}$. ; long. $97^{\circ} 14^{\prime} \mathrm{E}$.

We saw the Moscos group of islands yesterday evening, and early this morning sighted the North, Middle, and South islands. It is here that the finest, though not the largest,

edille lirds'-nests are found ; but the nests are built by a bird of quite a different species from that of Borneo.

Satarlay, March 26th.-Early this morning we passed Tenasserim.

During the day we were continually sighting varions little islands, as well as high momtain-peaks belonging to the more distant mainland. At nom we had run 160 miles, and our position was lat. $9^{\circ} 17^{\prime} \mathrm{N}$. ; long. $97^{\circ} 0^{\prime}$ E., Singapore being still 687 miles distant.

The day proved intensely hot and steamy, wilh scarcely any air, though the thermometer was not so high as one would have fancied. Thankiul we all were when, after some little delay, caused ly the difficulty of oblaining sulficient dranght

E: mad Soutla
in the fimaces, we were able at foum o'clock to steam ahead and so create a breeze for ousclves. Lightning flashed and gleamed on all sides, and the air lelt sulphwous and suffocatingly oppressive. At 7.45 r.m. we were overtaken by a heary squall of wind, accompanied by thunder, lightning, and rain, which obliged us to cluse all ports and skylights. Forturately the storm did not last long, thongh the weather continued showery all night.

Studuy, Murch 27th.-The day broke dull, cloudy, and siqually, and so continued. At noon we had run 139 miles
under steam and 1I under sail, Singapore being 537 miles distant. Position by dead reckoning-no olservations being possible-lat. $7^{\circ} 5^{\prime} \mathrm{N}$. ; long. $99^{\circ} 16^{\prime} \mathrm{E}$.

In the afternoon we made the Butan Islands. The erening looked dull, but the sky was occasionally lighted up by flashes of the most brilliant lightning. The sea was so full of phosphorescence that when Baby and I had our ante-prandial 'hose' our bathing-dresses glistened beantifully. I lelt rather mowell all day, and not being alle to go down to afternoon prayers, listened to them from the deck.

Momlay, March 2Sth.-Another squally day, with a good deal of rain and a fresh head-wind. It was dehghtiful on deck, but very hot lelow.

At noon we had run 170 miles mnder steam, and were only 350 miles from Singapore. A good deal more lightning at night, and a great deal of phosphorescence ; also a very badlooking, nearly new moon-flat on her lack and surrounded ly a lig laalo. I saw a moon at Tangiers with a similar appearance last year, just before the terrible cyclone at Madrid:

To-day we were to the north of Acheen Head and Brasse Island, but too far off to see the land. Scarcely any Cape in the world is sighted by so many vessels and touched at by so few as Acheen Head. Lord Reay warned us most strongly against approaching it too closely in our comparatively defenceless condition, on accome of the piratical character of the inhablitants.

Tucstly, ITurch 29th. -I had a goocl night in the cool deckhouse, and woke refireshed. I hare been rather orerworked lately, and am consequently beginning to sleep, badly and lose my appetite.

At nown we were in lat. $2^{\circ} 55^{\prime} \mathrm{N} . ;$ long. $101^{\circ} 28^{\prime} \mathrm{E}$. The run proved to be a 88 miles under steam, and lelt us 175 miles from Singapore.

SINGAPORE ENTRANCE TO HARBOUR

We could now see the high land near Sabagore, and in the afternoon found ourselves off Cape Rachada, a pretty little place with tall trees nearly to the water's edge, and a long line of snowy white beach with a background of bue momtains.

Wedncsdny, March 3oth.-At daybreak we were off Pufo Pisang, and shortly afterwards the pilot came on board-an unintelligible and unintelligent sort of man, who could not tell us anything, and who had great difficulty in understanding what we said. He bronght us, however, the latest papers.

At 7.30 a.m. the P. \& O. steamer 'Bolhara,' from London, passed, and we asked her to report us as following her closely. The morning was britliant, and the lights and shadows over the city of Singapore made it look even prettier than when I last saw it. As we had to coal, we proceeded right throngh the new harbour, and moored afongside Tamjong Pagar. Tab landed to make arrangements at the hospital for the reception of the Doctor, who was to remain there during our stay at Singapore, and soon returned with a very favourable report of the establishment. Dr. Simon, who was chief of the hospital at Malacca when we were there in $\mathbf{1 8 6 7}$, now occupies a simitar post here.

We had not been long at the coaling-wharf when our ofd friend the Suftan of Johore drove down and came on boad. He was delighted to see us, though surprised at our sulden appearance, for he had been on the look-ont for two or three days, and had sent two steamers out to meet us, which we had missed by taking another channel. The Suftan was profuse in his offers of hospitality, and wanted us to stay a week or two with him and to make all sorts of interesting excursions up the river in his new steam-yacht. This was impossible: but we promised to go to tea with him at his town house in Singapore to-night, and to visit him at his patace at Johore to-morrow.

Trareller's Falm, Sinsapore

We had many visitors in the morning, including one or two friends who had just arrived by the 'Bokhara.' In the afternoon the Doctor landed to go to the hospital, and later on we went on board the 'Bokhara,' and then landed and drove in the Sultan's carriages to the hospital, where, after some delay and difficulty, we found the doctor established in a comfortalle room. Afterwards we took a long drive-very much longer than we had expected-through the prettiest part of Singapore. A steep climb up a hill and through a pretty garden brought us at last to the Sultan's torm-house, which is full of lovely things, especially those brought from Japan. Such delightfully hideous monsters in bronze and gold, such splendid models, magnificent embroideries, matchless china, rare carrings, elaborate tables and cabinets, are seldom found collected together in one house. After a long examination of
all these pretty things, Tom arrived, and then we had to show them to him all over again. By this time we were quite ready for tea served in the rerandah, with all sorts of nice fruits and cakes. Altogether it was a charming little entertainment, and we regretted having so som to return to the hotel, where a mumerous company assembled at dimer in the large satoon and verandah. The drive down afterwards to the pier in jimikishas proved delightful to the children.

Thursday, March 31st.-Hove the anchor up at I. 30 p.m. and proceeded under steam, with pilot on board, through the Straits of Johore to the Sultan's palace, where we dined and slept.

Friday, April ist.-An early drive, and a walk throngh the charming gardens which surround the patace, occupied the first part of the morning very agreeably, and later we returned to the yacht to receive a number of visitors. At ir. 30 we got under way, and, with the Sultan on board, steamed through the Straits of Singapore.

Saturdiy, Amil 2nd.-Weighed anchor between I and 2 A.n. and proceedel under stean towards Borneo. Mr. Crocker, the recently appointed Governor of North Borneo, who was on board, gave us much interesting and valuable information during the royage about the new colony which has been formed by the British North Bornco Company.

It was a very hot day, but we were all busily occupied in tidying up and settling down again alter our short but pleasant run on shore.

At noon we were in lat. $I^{\circ} 26^{\prime} \mathrm{N}$. , long. $105^{\circ} 39^{\prime}$ E., having rum 105 miles. At 4 r.ar. we made Victory and Barren Islands, passing close to them later in the evening.

We were talking to-day of the St. John Ambulance Association, and as an illustration of what a useful institution it would be in these parts, Mr. Crocker spoke of the case of an unfortunate man who had broken, or rather smashed, his
arm so badly as to make it evident that his only chance of life lay in removing the shattered limb. There was no doctor near, nor anyone who knew anything of surgery. Somebody had, however, fortunately seen a surgical book at Govermment House. This was brought, and one man read aloud from it, while the other did his best to follow the instructions, and with the aid of an ordinary knife and saw, cut off the arm. The wound healed in a marvellous manner, and the man is now alive and well.

Such an incident is happily quite exceptional. Indeed, it is almost impossible to imagine the combination of courage, determination, and endurance which must have been required on both sides. But minor accidents are of frequent occurrence in these wild regions, and a knowledge of how to render first aid in such cases would often be of invaluable service.

We had an 'Ambulance ' case on board to-night, for a vein lourst suddenly in the

checked the hemorrhage. Without his prompt help the consequences might have been serions.

Simduy, dmil 3rd.-At 6 a.m. sighted St. Pierre. The wind was fair and light, but it did not seem to temper the intense heat. At noou we were exactly under the sum, and were therefore all as shadowless as Peter Schlemihl. Despite the heat we had the Litany at half-past eleven, and eveningservice at half-past sis. At ro p.m. we anchored off Tanjong Pulo, at the mouth of the river Kuching, on which stands Kuching itself, the capital of Sararrak.

Tom feels the heat greatly, and has heen unwell for the last day or two. To-night $l$ had an anxions time looking after him, and could get no help from the Doctor, who was himself ill and delirions.

Momelty, A $\mathrm{p}^{\prime}$ il $4^{\text {th }}$.-The anchor was hove at 6.30 A.m., and we proceeded towards the entrance to the river, meeting several natives in fishing-loats, who told us that Rajah Brooke was away at Labuan in his steam-yacht the 'Aline.' We therefore hesitated about going up the river, especially without a pilot; but it seemed a pity to be so near and to miss the opportunity of seeing Fuching. So off we went up the narrow muddy stream, guided only by the curions direction-boards fixed at intervals on posts in the water, or lung from trees on the banks.

This plan of making every man his own pilot seems both sensible and useful; but the general effect of the noticeboards was not picturesque. The wording of some of the notices was lurief and practical, though such a caution as 'Hug this close on the outside, painted in large letters on a board at the water's edge, had a certain quaintness about it which amused us. We ascended the river at harf-tide, when the chamel is pretty clearly apparent; but at high tide the way must be difficult to find. The scenery was somerrhat monotonous until we approached Finching, but we were assured

reaching our destination we found great difficulty in turning round, owing to the narrowness of the river. The heat was fearful, and the smo poured down throngh the donble awnings with an intensity which must be felt to be understood. We were rather afraid of both the fever and the mosquitoes, and as neither the Rajah nor Ranee was at Tucling, we decided to drop down the river again with the afternoon tide.

After a short delay we landed with Mr. Naxwell at some neat little steps close to the jail, where there appeared to be but few prisoners. The public offices and buildings of Kuching seem to be particularly suitable for this hot climate. Not far off is the market, with nothing left for sale in it except a few vegetables and pines, the meat and fruit markets jeing over for the day, and the fish-the staple commodity of the place —not having yet come in. At high tide the pralnins which we had seen waiting at the month of the river would sail swiftly up, bringing the result of their morning's work, the crem of each eager to be first and so to command the best prices.

Most of these prahus are propelled by two, three, and four, or even eight, paddles; and one which we saw had twenty. The larger ones only come out as a rule for warlike purposes or on high days and holidays, especially on New Year's Day, which is a great festiral in Borneo, when five hundred warriors frequently compete in one race. It must he wonderful to see their paddles flashing, their boats dashing through the water, and to hear their wild shouts and war-cries. If only we could have stayed, a race wonk have been got up for our edification, although most of the warriors are out on the warpath just now, looking atter stray jols in their line, arising from the difficulties letween the Sultan of Brunei and the Fiadyans.

A long narrow room, over the market is used as the

museum at Kuching, and after climbing up by a steep ladder we came to a trapdoor, of which the key could not be foụnd for some time. The collection is interesting, and gives a good idea of the manners and customs of the Dyaks. It comprises specimens of their household utensils, weapons, dress, matwork, besides models of their dwellings and canoes. Some of the basketwork was cleverly moven in beautiful patterns, marked out and dyed with the juice of coloured berries and seaweed. The
head-flatteners, or boards used by the Milanos to alter the natural shape of their infants' heads, specially attracted our attention, and I felt it difficult to decide whether the invention aimed at increasing the child's beauty or its brains.

We were shown one of the ingenious air-compressing tubes which have been used by the natives for hundreds of years past to produce fire. It seemed to afford a proof of the truth of the old adage that there is nothing new under the sun. Professor Faraday alluded in one of his lectures to the possibility of producing fire by means of compressed air as a discorery of comparatively modern science; whereas the fact las long leen recognised and put to practical use in these obscure regions of the earth. The war-jackets were made of

hirds' feathers and wikd heasts' skins, or of the batrks of trees. Sometimes these garments were liberally decorated with small bells, cownies, and pieces of metal cont fiom old petrolemm and preserved meat tins, which jingle and rattle as the wearer mores. Others were like chan-armom, of which the strips were fastened together by hits of hide or leather. The shields seemed of all sorts of shipes and sizes, some long and narrow, some circular, and some large enongh to cover a man completely, and they were nearly all omamenter with tufis of hack, silky, human hair. The kreises and parongs were similarly decorated, as well as with fine horsehair dyed bright scarlet, and streaked with white. Some of the weapons hat splendidly carred handles and very fine beaddecorations, and many of the blades were inlaid with gold and silver. Sulu and Brunei have for centuries been celebrated for their arms, specially for their steel and damascene-worked armour, as well as for their bronze guns. The latter are used as current com by the native trilies in their more important transactions. If a slave be bought or sold, or a quantity of rice, sago, or Jeans changes hands,

T
the ralue is almost always reckoned in bronze guns. Greyshirtings, a more convenient form of money for small dealings, have now gone out of fashion, but blue cloth still holds its own. Chinese 'cash' and Spanish dollars are in circulation, but the natives will not look at a 'bit,' nor' at any other sort of coin, either gold or silver. The metal which the natives prefer for their guns is composed of Chinese casl melted up, and for their swords they use the iron bands by which cotton bales are liept together. Outside the Govermment buildings stand some beautiful and curious camon, of moderate calibre. Some cane from Brunei, while others had only just been captured on the Barram and Leyun rivers, during the Rajah's expedition, and were just being cleaned up and placed in position. The carving and modelling of many of them were extremely good.

The Rajah's carriage, a neat waggonette and pair, driven by an English coachman, was waiting to take us to Mr. Maxwell's house, where we were to hunch. We drove along excellent roads, passing a church, school-house, and club, to a very pretty bungalow, standing in a pretty garden, and perched on the summit of a hill. The air felt much cooler here than in the town or on the river, and gave us excellent appetites for a nice impromptu little lunch. One delicacy consisted of fresh turtles' eggs, which I am afraid we did not all appreciate, for they tasted like ordinary eggr mixed with coarse sand. They are quite round, about the size of a small orange, with soft white leather, or rather parchment-like shells, and are found in great abundance on an island near Fuching. The natives make a coarse oil from the inferior eggs.

The walls of the dining-room were covered with shields, kreises, spears, and arms of all kinds, collected by Mr. Maxmell himself. In some of them mason-bees were making or had already made their nests! No wonder Mrs. Maxtrell complained litterly of the mischief they did, and of the ravages of
white ants, which are even more destructive. The dampness of the climate, moreorer, makes it necessary to have the contents of wardrobes and bookcases frerquently taken out and shaken, tumed, and examined.

We drove down to the river, intending to take boat and cross to the island and fort, but were only just in time to rush into the Gorermment offices and so escape a terrible thonderstorm accompanied by torrents of rain. In this shefter we had to stay until it was time to embark on board the 'Adeh,' in which we were to go down the river.

In the meantime the rest of our party had been funching at the fort, where they had much enjoyed the view from the heights-a sight which I rather envied them. Presently we saw them come down in the pouring rain, get into the Rajah's ten-paddled loat, and set oft to join us. We were all drenched by the time we got on board the 'Adeh.' Here we were joined by Major and Mrs. Day, as well as lyy two Dyak soldiers in full war-costume, in readiness to be sketched or photographed.

Shortly after starting the strong current caught our bow and carried us into the lonk, causing us to collide with and considerably damage two schooners, as well as the balcony of one of the numerous wooden houses standing on piles in the river. The bowsprit of one of the schooners was completely interlaced with the stanchions, ropes, and raitings of our gangway, and it must have been a good stick not to snap off short. The tide was now much higher than when we came up, but the temperature had been considerably fowered by the thunderstorm, and was still further reluced by the rain, which continued to fafl throughout the alternoon, making photography well-nigh impossible. The Dyaks seemed at first rather frightened by the camera, which they called 'the engine;' but they were very civil and obliging, and assumed all sorts of attitudes, warlike and otherwise, for our
edification. Their scanty clothing was elaborately ornamented with bead-work and embroidery, and the little mats which they carry to sit down upon were made of exquisitely fine plaited grass-work. Their arms were highly decorated with hmman hair of various colours, as well as with cowries, beads, and little woven balls of Brunei work.

In due time we reached Quop, the highest point to which large vessels can ascend from the sea. Here we quitted the 'Arleh,' and took all the party, including the tro Dyaks-

Fuching
who were very much astonished, and I think rather frightened -on board the 'Sunbeam' to tea ; alter which we sail farewell with regret to our kind friends, and, with the 'Adeh ' to guide us over the treacherous shoals and mud-banks, steamed away, until we were once more fairly at sea and had lost sight of our pilot in the gathering darkness.

Tom had another bad night, fancying he had canght the fever, and that we should all have it from going up the river. I had just persuaded him to take a sleeping-draught, and try and get some comfortalle sleep, when I heard a tremendons
noise on deck. I feared at tirst that some of the men, as often happens in these out-of-the-way places, had been treated to poisonons liquor and were now suffering from the effects of it; but on ruming up to make inquiries, and, if possible, , puiet the disturbance, I was just in time to catch sight of the rat, whose presence on board has only recently been detected, scuttling off in the bright moonlight. He must have leen tempted from his lair on the top of the deck-house by the fragrant smell of the new pineapples from Kuching, which were hang in the

The Fort
port cutter, but on renturing forth he had at once been 'spotted' by one of the men. When I arrived on the scene the whole crew had heen called, and were in hot pursuit-I need scarcely say, with no success whatever.

Thestuy, April 5th.-A calm, close day, with a heary swell rumning down from the China Sea, probably caused by a typhoon. Everybody most uncomfortable. Sails and boats werc sereral times reported, but they turned out to be only little islands such as those of Nipa and Nibong, or else groups of floating palms swep, down by the Bruit and Barram rivers.

These troo rivers and the Rajang have the unpleasant peculiarity of washing small floating islets out to sea, which serionsly endanger navigation.

At noon we had steamed 173 miles, and were in lat. $3^{\circ} 38^{\prime}$ N., long. 1 I I ${ }^{\circ} 56^{\prime}$ E., Labuan being 222 miles clistant.

Tom is still unwell; but I think it is better that he should be obliged to exert himself on deck, instead of remaining in his cabin.

庌

## CHAPTER VII.

## LABUAN.

Wernesday, April 6th.-At daybreals it was so hazy that our position could not be ascertained. Between 10 and 11 a.m. sights were worked out, and it was found that a current had set us thirty miles to E.N.E. At noon we had run 230 miles under steam, and, putting the yacht's head round, we steered direct for the northern entrance to Tictoria Harlour, off Labuan Island, where we dropped anchor at 2 p....

Not long afterwards Lieutenant Hamilton, R.N. (Harbourmaster, Postmaster, Captain of the Port, Treasurer, and I helieve the holder of half a dozen other offices under the British Government), and Mr. Everett called. They
told us all the news, and recommended our going alongside the wharf to coal and water at this, the last British port before our long royage to Australia. It is quite the funniest, most out-of-the-world place we have ever beell in, just as Sarawak is the most wonderful little independent state -well managed, complete in itself, with its small army, still smaller nary, and miniature govermment. Labuan has not possessed a Governor since Sir Charles Lees (then Mr. Lees) left, but it boasts capital public offices, a first-rate Govermment Honse, Secretary's residence, church, parsonage, and other amenities of advanced civilisation. Only there is nobody to govern, and hardly anything for the officials to do. At present the colony of Labuan seems a farce, and ought either to be done away with or placed on an entirely different footing. The best plan wonld prolably be to make it an adjunct to the Straits Settlements, at the same time establishing a protectorate orer Sarawak and Brunei.

Dr. and Mrs. Leys came on board in the afternoon, and later on we landed with them at the very rotten and rickety wooden pier, and reached a grass sward, by the side of which stand the public offices and a few shops. Some of the party walked, while others drove in varions little pony-carriages. Baloy and I went with Dr. Leys to see a party of Sarawak Dyaks who had just come in from the Barram River with weiges of gutta-percha, whicll they were offering for sale, as well as some weapons and clothing just captured. We bouglit a good many interesting things, such as jackets made of cotton, grown, dyer, and woven ly the Dyaks, horn and tortoiseshell combs, kreises, parongs, linives, pipes, tobaccopouches, travelling-lages of plaited matting, and sumpitans or hlowpipes from which poisoned arrows are discharged. They prize these latter very highly, and are generally loth to part with them, so that we may consider ourselves fortunate in haring come across these few members of a trilue just returned
from it warlike expedition judiciously combined with the more peaceful and profitable trade of gathering shtta-percha amd indiarrubher. We also met a group of hirds-nest collectors, from whom we boncht some nests of both the black and white rarieties, scientifically known as C'ullocalin. Then we purchased two small rhinoceros-homs, greatly prized here for their supposed modicinal rirtues, and considered to lee worth their weight in goll. We succeeded likerwise in getting some pairs of splendid pearl-shells, with fine goklen lips and incipient pearls adhering to them lout I am obliged to admit that they were frightfully expensive.

After visiting all the shops in the town-few in mumber, and nearly all kept by Chinamen-we went for a drive into the country. It was just like driving throngl one vast park, along soft springy green roads leading through fragrant jungle. There were no fences, and fruit-trees of every hind ahounded, hearily laden with oranges, pomaloes, manges, mangosteons, durians, and other delicacies-all, unfortmately for us, at present unripe.

The incongruity of some of the things which were pointed out to us during our drive mas very amusing. There, for instance, stood a large jail, in the happy condition of being tenantless. So long, indeed, had it been empty that the gates stood permanently open, and the jailers had all departed for other lands, with the exception of the chief official, who remained in the colony, indeed, lut who had long since turned his attention to other arocations. 'The system of plurality appears to prevail in Lalman, and it is said that amusing situations have more than once arisen in consequence of the multiplicity of offices centred in one individual. The postmaster, for instance, has been known to write to the treasurer for payment for the delivery of mails, the harhourmaster to the same official for the ralue of coals consumed, the captain of the port for the homeward passage-money of
some shipwrecken sailors--all three letters and the replies thereto being in the same handwriting. I rather think, by the way, that the Labian treasury was at a low ehb when we were there; for I know that the question arose whether it contaned enongh money to meet some fifty or sixty dollar notes of ours which we had given in exchange for our purchases.

The pension-list is very large in the island of Labuan. There is a church, but no acting clergyman, though there are three on the pension-list, and the hishop only comes twice a year, or sometimes twice in two years, according to the

reguirements of the remainder of his large diocese, which comprises North Borneo, Sarawak, and Singapore, besides Labuan. He is expected to arrive to-morrow from Sandakan, but I fear we shall just miss him.

There is an hospital, lat no resident doctor-only two on the ineritable pension-list. I believe, however, that a surgeon is now on his way out from England to take up the duties of the post. Government House is surrounded by a charming park and garden, and resembles an old-fashioned West Indian planter's residence of the best class. It might well
serve to illastrate scenes in 'Tom Cringle's Lor' or ' Peter Simple.' It is built entirely of a dark woor like mahogany, and the rooms themselves looked snos and well arranged; but, alas, the white ants have attacked one wing of the house, and it will have to be pulled down ov rebuilt.

Snakes are not numerous in Labuan, but the other day Mrs. Leys found one comfortalsly coiled up on the sofia, just where she was going to lie domn. Not far from the town Di. Leys once shot an alligator on its hest, which contained thinty-nine eggs. Two of these he gare me, and I hope to get them home salely, for they are not easily to be procured. We were also shown some beatiful shells and weapons, and a war-jacket made of bearskin, decorated with small bells and pieces cut from kerosene-oil tins.

Onu drive down to the shore, along the grassy roads of the park, in the clear moonlight, was most delightful. The yacht had gone off to her anchorage, and we had to wait some time for a boat. In the intorval we amused ourselres with a Chinese open-air theatre, waxwork exhibition, and a puppetshow.

Thursrlay, April 7th.-Weighed at 7 A.m. Mr. Everett and Lientenant Hamilton came on board, and soon afterwards the mail steamer arrived, with the Bishop on board. We steamed across to the mouth of the Bronei River, admiring the leautiful views on our way, especially at Coal Point, where we transferred ourselves to the Rajah of Sar"dwak's steamer 'Lorna Doone,' and proceeded up the river, the scenery of which is very picturespue. The late Sultan luilt a wall of stones across the channel with the view of keeping out the British fleet under Sir Thomas Cochrane and Capain Keppel —now Admiral of the Fleet Sir Harry Keppel ; and although he did not succeed in his object, the result has been to make the navigation extremely difficult. The bay itsell is surrounded by vast forests, and not long ago a steaner was
prevented from entering the river for three days, in consequence of it fierce jungle fire, the dense volumes of smoke from which completety obscured the entrance. The hills on either side of the river are prettity wooded, but here and there the land has been cleared and taid out in terraces for the cultivation of pepper by the Chinese. Brunei River has been called the Phine of the East, and I think it deserves that name better than the town does its proud title of the Venice of the East, the sole point of resemblance in the latter case being that both cities are built upon piles.

Some members of another tribe of Dyalis came on board to-day, with seven heads which they had captured, not on the war-path, but while engaged in a nominalky peaceful expedition into the jungle in search of gutta-percha, camphor, and heestrax. They had chanced to come across some natives belonging to a hostile tribe, and had promptly secured as many heads as they coutl.

The aproach to the town of Brunei is extremely picturesque, but the place itself is not imposing. The wooden houses stand, as I have said, upon piles, and there is no means of commmication between them except by boats, rarying in size from house or shop boats to tiny canoes almost invisible beneath the widespreading hats of their occupants. The flooring of the houses is all open, and all relise-matter falls or is thrown into the water leneath.

We anchored a little abore the 'Packnam,' and sent a messenger to the Sultan to enquire when it would be conrenient to him to receive us, for which furpose he appointed two o'ctock. In the interval we went lor a row, in quite the intensest heat I ever felt, to see something of the town and the market. The women's hats were enormous-from three to four feet in diameter. Anything more curious than the appearance of a boat-load of these ladies can scarcely be imagined. It looked just like a bunch of gigantic mushrooms
which had somehow got adrift and was floating down the stream. The marketing is, of course, all done in boats; and it was interesting and amusing to watch the primitive system of exchange and barter. Tery little money passed, though some of the hideous old women had little heaps of Chinese cash in front ol them. Alt the young women are kept shut up in the houses, and those let out to buy and sell are indeed frightful specimens of the human race. A couple of durians seemed to buy a hat. I coutd not arrive at any idea of the price of other articles. The fish is brought up here from the sea, just as at Kucling, by large boats to a certain point and thence in prahus. Both fresh tish and stale fish—rery stale and offensive it seemed to usappeared to be the tead-
 ing article of commerce.

Besides the small canoes and prahus there were a good many large house and shop boats, with quite a goodly supply of stores, all owned by Chinese.

Borneo produces about half the sago used by the civilised world. On our way among the houses we had many opportunities of observing the primary process of preparing sago for the market. It is not very inviting, and is productive of a most sickening smell. The large logs of the sago-tree are hrought down from the jungle by river and moored in the dirty water against the piles underneath the houses, the consoling feature of this arrangement being that the water is running. One $\log$ is selected at a time for treatment. A man stands orer it, and with an instrument, something between a hatchet and a hoe, extracts all the pith of the tree, which is the sago. This he pitches on to a mat suspended between four poles over the river, and, having poured water over it, he and any members of his family whe may happen to be available proceed to run round and jump and dance upon the whole mass, singing and smoking all the time. This pressure has the effect of squeezing the fine sago starch through the mat into a trough below (usually an old canoe), full of water, where it remains until it settles. The water is then run off, and the white sticky mass is sold to Chinamen. It is satisfactory to know that it goes through a good many more washings lefore it is considered fit for the market.

Brumei is said to hare been at one time a town of 25,000 houses-such as they were-with an average of from five to seventeen occupants to each house. This does not, however, include the Sultan and his relatives, with their numerous retinues. Then the numbers dwindled down to 10,000 inhalitants; and at present it is difficult to believe that there are more than half that number; lut we are told that some 5,000 are now away on the war-path.

At two o'clock exactly we landed, or, to be more precise,

climbed up a narrow ladder, the rungs of which were ray far apart, to a wooden staging supported on piles. It was a difficult feat to perform gracefulty, and the moise of a salute of nineteen guns, fired atmost in our ears, did not tend to facititate matters or make one feet more comfortalde. Then we were led up a long wooden dier, on which stood some small bout heautifnlly ormamented camon, of Bronei manufacture, until we came to a targe room, at one end of which stond a sort of dais, like an entarged hedstead, covered with mats. On this the Sultan-an ugly, smiting, feehle old man--shortly afterwards took his seat. He was attended by retainers bearing letet-toses, spittoons, weapons, and all sorts of things which his Majesty misht want or fancy that he wanted. He received us affady, shaking hands with us all, and inviting us to be seated, after which he ordered large wax camdtes to be ptaced in front of Tom and me, Ton's candle, howerer, being much the ligger of the two. This was intended as a great complimont, and if times had not been so lad and heeswax so scarce, the candles woutd, we were informed, have been of even greater size. We were then offered cigarettes and excellent tea, flayoured with herbs, very hot and sweet.

The sides of the room had been left open, for the sake of coohness, but the surrounding space was filled ly a dense mass of human beings eager to see what was gring on, so that there was not much fresh air. Conversation rather tanenished, for neither of the interpreters was rery quick, and we had considerable misgivings as to the rahe and conrectness of their translation of our pretty little speeches.

At last, after presenting the Sultan with some shight olferings and expressing our warm thanks for the kind reception accorded us, we retired, being escorted to the boat by the First Wrazier and another officer of state. Haring again admired the camon, and heard the history of their manufacture, we re-embarked in our boats under a fresh salute of
nineteen guns. I fear the poor torm of Brunei must hare been put to great expense by the Sultan's desire to do us honour. Just as we were starting, the large candles, hastily blown out, were put into our boat, as a last and very special compliment.

We retmoned straight on hoard the 'Lorna Doone,' and

had scarcely arrived ere we saw a long, smartly ornamented thinty-paddle canoe emerge from among the houses near the Sultan's palace, and come swriftly towards us. It had a white flag at the stern and a green flag at the low, and was crowded with people carrying umbrellas of all sorts, sizes, and colours.
which served as insignia of the rank of their owners. Among them two very large yellow Chinese umbrellas, surromderl by three little carred galleries, were conspicuons. One was carried over Pangeran Bandahara, and the other over his younger brother, Pangeran di Gadong, who holds the position of Second Wazier of Bronei, lout who had not appeared at the palace in consequence of his not being on speaking terms with the present Sultan. The two royalties, without their unbrellas, but accompanied ly an interpreter and a fers of the chief officers, came on board the 'Loma Doone,' and were received ly us in the extremely small deck-louse, the remainder of the suite haring to content themselves with looking through the windows and strolling about the deck. It wats rery puzzling to be obliged to invent fresh civilities, for we felt that orw recent visit had quite exhansted our stock; but I luckily hethought me that there was some connection ly marriage between the Sultans of Brunei and Johore; and the discussion of this point, which must hare cost the poor interpreters much mental effort, lasted us a long time. In fact, with the exception of a short interval spent in enquiries as to our respective ages, it carried us on until it was time for our risitors to take their departure, which they did with many effusive hand-shakings, and many no doult charming little fareweft speeches.

The way in which the comection letween the Sultans of Bronei and Johore came about is rather curious. The Sultan of Sum had been engaged in negotiations for the marriage of a princess of Johore (an aunt of the present Sultan) to one of his sons. The Sultan of Bronei had also set his mind on the same young lady. When the Sulu fleet of prahus started to bring the fair-or dark-princess to her new home, the Brumei fleet followed as far as the Straits of Johore, and anchored outside, but in the night a swift Brunei prahu stole softly along the shore, carried the young lady off, crept through the fleets again, and was som out at sea on its way back to Brunei. The
next morming, when the princess was not fortheoming and the true state of affairs was discovered, the Suhu fleet was naturally anxions to start in pursuit; but the Brunei prahus intercepted them, and before the Sulus could fight their way throngh, the lady had been safely lodged in the Sultan's harem at Bronei.

If the weather had not been so exhaustingly hot, and Tom had not been so much afraid of our getting fever, I shonld have tried to persuade him to take us to Suhu, which must be a most interesting country, jurging from the description of Burbridge, Wallace, and others. The natives retain many traces of the old Spanish dominion in their style of dress and ideas generally. They have excellent horses, or ponies, and are adepts at pigsticking. Occasionally boar-lunts are organised on a large scale, which allow of a fine display of horsemanship, as well as of gandy costumes. At the feasts given by the Sultan, the dishes, and even the plates, are all of mother-of-pearl shells, of the finest golden-lipped variety, each with one or more large pearls adhering to it. In some cases visitors have been tempted to pocket their plates, and strict watch and ward has therefore to be kept over them. There were some Sulus on the 'Lorna Doone' with us, wearing horsey-looking tronsers, short jackets with buttons on the sleeves, bright sashes stuck full of knives and other arms, and jaunty little turbans, something like a Maccaroni's cap with the traditional feather stuck in it. They seemed altogether superior in point of civilisation and appearance to the Sarawak and Brunei Dyaks; and if the taste of the lady whose adventures I have just recorded was at all consulted, I cannot help thinking she made a mistake in the selection of her adopted country.

After the Sultan's nephew had departed, we had a visit from Achun Mohammed, who has been British Consul here for many years, often in very tronblons times. With him came an army of shopkeepers, or rather manufacturers, from whom we bought several curious specimens of Brunei wares. The
metalwork is really beantiful, especially the brass simhi-boxes, and some kettles with an ingenious arrangement in the lid, causing them to whistle loudly when the water boils. This place is also celebrated for its earings, which are exactly like champagne-corks in size and shape, and are made of gold or silver gilt, and studded with rubies, emeralds, and other stones found in the neighbourhood. The narrow part of the cork is fixed in a large hole in the ear, down the back of which a row of little earrings is often worn in addition.

Brunei looked very pretty as we left it, in the light of the now setting smn. The 'Packnam' had alreaty started on her return jommer, and there was not much time to spare if we wanted to save the tide and the light. On our way down the river we again saw the heights from which Sir Harry lieppel had bombarded the town, and the Chinese pepper-terraces, now fast falling to decay. By five occlock we had arrived alongside the 'Sumbeam, with quite a cargo of purchases, and soon afterwards, liwing said farewell to our friends and entrusted to their care a very heary mail for England, we steamed away.

The spot where we had anchored in Brunei Bay was exactly opposite the Mnara coal-mines, of which we could just see the shafts, with one or two houses beside them. On our return to the jacht we found that the owners of these mines had Jeen on loard, and had expressed a hope that we would postpone our departure long enongh to enable us to visit the colliery, which seems likely to becone a valuable property. The seam is twenty-six feet thick, and the coal is of good quality. After the Labuan failure, however, one is disposed not to be oversancuine in such matters. When Mr. Cowie first brought Lis wife out here the place looked so desolate and dreary that she absolutely refused to land. After a while she was persuaded to make a closer inspection, and, being a very bad sailor, has never left the place since, except once, when the

Rajah of Sarawak sent his steam-lannch for her on New Year's Day to enable her to go and see some sports at Labuan. She was atraid to come on board the yacht, and we had not time to call upon her and take her some books and papers, as I should like to have done, for her life must be terribly isolated.

I have often been astonished to see how well people resist the relaxing influences of these out-of-the-way places. Their houses all have a nice homelike look; the ladies are well dressed, and apparently keep their households in excellent order. In the rare case of mexpected visitors dropping in, meals are produced at short notice without bustle or confusion, the table being often decorated with flowers, and always arranged with refinement and elegance. What struck me as perhajs even more remarkalle than the neatness and order of their houses was, that these ladies, who have to do, or at all events very closely superintend the doing of, the more important part of the household work, talk far less about their servants and domestic troubles than many people in England, who only have to give an occasional order. They have also plenty of conversation on other than local subjects, though there are no circulating libraries within reach, and the supply of books and newspapers must necessarily be limited. It may be that this scarcity leads them to study the volumes which they possess more closely.

Friduy, April 8th.-To our great disappointment, we passed Gaya Island and Bay before daybreak, and were therefore unable to see anything of the magnificent harbour, where the North Borneo Company has one of its many stations.

At 6 A.m. we opened out Ambong Bay, lehind which rose Kina Balu (in English 'the Chinese Widow'), I 3,700 feet high, looking most beautiful through the morning mist. A little to the morth of this spot the Tainpasick River rums into the sea, and we are told that the best way of reaching the
lower elerations of the mighty momatain, with their coudless wealth of orchids and pritcher-plants, lies on that side.

Finding that to pass ontside Banguey Island would involve our making a large circuit, and losing some fine scentry, we decided to go through the Mallewalle Chamel, and to anchor off Kudat for the night. At noon we had come 160 miles under steam, liudat being

thirty miles distant. At 2 p.1. We reached the northermmost point of the island of Borneo, which used to be the favourite place of assembling for the large fleets of pirate prahus, formerly the terror not ouly of the neighbouring Straits but of much more distant seas and countries.

The entrance to Marudu Bay, another of the many fine natural harbours on this gulf-indented coast, is most picturesque. At 4 r.m. we anchored off Kudat, in the small bay of that nime, which is only an indentation of the shore of the larger Marudu Bay.

We landed at the ustal rickety Borneo pier, and were met by Mr. Davies, the Resident, and Dr. Lamb, the company's doctor for this district. Tab and Mr. Pemberton soon made friends with Dr. Lamb, and went out snipe-shooting with him, the rest of the party meantime strolling about the bazaars, which, thongh neither large nor well stocked, afforded an opportunity of picking up a few curios, such as saws from the nose of a saw-fish, sirrhi-boxes, gongs, old china jars, Java sarongs, and so forth. We were also shown two large heaps of grom from the interior, lying on the seashore ready for shipment. Then we took a ferv photographs, including one of a house on piles, and another of a long Borneo honse, in which many families live under one roof, with separate entrances for each family. Afterwards we strolled slowly on up the hill, towards the Residency. It was a pretty walk, but rather tiring this hot evening. I felt nearly exhausted myself, and was grieved to see how completely done up Tom was ly what ought to have been for him very easy work. When at last the verandah was reached he was quite worn out and glad to lie down in one of the comfortable hasket chairs. Delicious tea and cool champagne-cup soon refreshed us, however, and made us letter alle to admire the charming garden, with its profusion of plants and flowers, and to watch the anties of two tame mius, or orang-outangs, which were chained in separate palm-trees close to the house. They were ugly-nay, hideous animals-but rery amusing in their ways. Their names were Zachariah and Jane; and Zachariah, being the tamer of the tro, was allowed to rm alout loose. He came to lis master to be fed, then ran up his own palm-tree, from which he
jumped easily on to Jane's, and tried to entice her to other tree-tops; but of course her chain prevented this. It made quite a little comedy, for when Zachamah had teased her sufficiently he brought her bunches of fresh leaves, and evidently did his best to induce her to, as it were, kiss and

Kuant
make friends. We watched them with much interest for a long time, and at last tried to take a photograph, but I fear they were too restless to allow it to turn out well.

Some fine specimens of the heads of wild cattle shot by Mr. Daries stood in the verandah. One head alone required four men to more it. Mr. Daries gave me some interesting
curios hrought from a village where a rather severe fight took place recently. The natives posted themselves with great cumning behind some rocks on the top of a hill, which our people had to scale. From this shelter they lurled down spears and poisoned arrows, wounding many of their assailants, while our rifles were of no effect against them until the height had been carried.

On our way back to the jacht we had to cross a rickety wooden bridge orer a muddy creek, in which some of the party thought they saw a crocodile; not a rare sight on this coast, though they are not so numerous here as in Sarawak, where the Govermment offers a rerrard of a dollar a foot for all those killed. Last year 2,000 dollars were paid for 2,000 feet of crocodiles of all sizes and ages.

Dr. Lamb, who dined on board with us, appears to be greatly interested in his work, though the life is rather rough. He has a goor deal of riding about the country to vaccinate the natives, who seem fully to understand the value of the operation in mitigating the ravages of smallpox-a disease by which the country was at one time decimated. Our regret at not having been able to stop at Gaya mas increased when we heard from Dr. Lamb that the Assistant Resilent, Mr. Little, had just returned from a successful ascent of Kina Balu, having reached the summit ly a new route, and brought down a wonderful collection of plants and flowers.

Abont ten o'clock Mr. Davies came on board, and with Dr. Laml) and Tab started off on a shooting expedition across the bay.

Suturilay, Apil gth.-The night was hot and oppressive, and we could not help feeling somerrhat anxious about the sportsmen, whose expedition in search of wild cattle has a decided spice of danger in it. Two o'clock came, and then four, and still they did not return. At last, to our great relief, at half-past six they arrived alongside, bringing with them
a fine young Sambur buck, the carrying of the careass having delayed them considerably. They were disappointed not to have succeeded in lilling a buffalo, especialty as they had seen several herds of them in the distance; but the natives who had been sent to drive the cattle performed their task with such indiscreet ardomr, and with so much moise, that of course they trightened the cattle away.

Directly the sportsmen came on board we started, and proceeded under stean close muler Malleangan, and thence southward of the fatal Egeria Rocks to the western extremity of the islamd of Mattewalle, prassing to the northward of Mandarilla, and to the southward of Takaban, whence we steered for Tigata. By noon we had steamed eighty-seven miles since leaving lindat. Tom went up on the foreyard at 6.30 A.m., and did not come down mintil I. 30 f.m., When we had rirtually passed the most dangerous part of the coast. We sent his breakfast up to him in a bucket, for he did not dare leave his post for one moment, the chamet heing most intricate, and the only guide the difference in colour of the coral patches. He suffered considerably from the heat of the amost vertical sun, which iftistered his legs, in spite of extra protection, and mate the glasses, which he had constantly to use, so hot that they lournt his hands and eyes, as they did ours when he brought them down on deck.

About 4 r.m. we touched on a coral patch, in two fathoms,
not marked on the chart (in lat. $6^{\circ} 40^{\prime}$ N., long. $117^{\circ} 52^{\prime}$ E.), which rather astonished us, and caused us to go still more slowly and carefully for some time. The sea leing absolutely smooth, and the sky overcast, there was neither break nor reflection to help the look-out, though Tom thought that he had noticed something peculiar in the colour of the water a fer moments previously. He was almost contimuously in the foretop again from two o'clock matil dark, when he took up his position on the topgallant forecastle.

We passed between Tigabu and Lipeendung, and outside Sandy Island, Balhalla, Lankayau, Langaan, and Tong Papat, entering the Bay of Sandakan at II. 45 P.m., and anchoring off the torm of Eleopura exactly at eight bells.

## ELEOPURA.

Euster Sumlay, April 10th.Eleopura looked extremely picturesque in the pale moonlight, with the grand sandstone bluff of the island of Balhalla standing out holdly in the foreground against the starlit sky ; but the coast-line seemed still more locautiful in the bright morning sunshine. The brilliant light was relieved by some heary thunderdouds fringing the Bay of Sandakan and langing in denser masses over the mouths of the numerons rivers which empty themselves into it. Balhalla, with its cliff of red sandstone ruming sheer down to the sea,
is clothed on the shoreward side with the richest tropical regetation, including vast quantities of the beautiful nepenthes, or pitcher-plant, which forms so prominent a feature in the flora of Borneo.

Mr. Flint, the harloour-master, came on board at six o'clock to offer us the hospitality of his bangalow. After breakfast he and Mr. Crocker landed with the kind intention of arranging for us to spend a short time on shore to recruit a little from the effects of the intense heat, the air being naturally much cooler on the hills than down in the bay. We had service at II.30, and the present Governor, Mr. Treacher, and afterwards two other gentlemen, came to lunch. Later on we all landed, some of us going to the little church, where Tom read the service. There is no resident clergyman at Sandakan, but the Governor supplies his place every Sunday, except when the Bishop happens to pay a visit to the place, as he did last meek.

The luxury of getting on shore to large airy rooms, with deep cool verandahs, and the feeling of perfect rest and repose, can only be fully appreciated after a long and anxious voyage in a hot climate on board a comparatively small ship. Nor can anyone tho has not suffered, as we all have, from prickly heat, understand how pleasant are fresh-water baths. We all felt far too comfortable and delightfully indolent for letterwriting, or even for reading, and could do nothing but enjoy to the utmost the delights of the shore under such agreeable conditions. Our good-natured host had turned out, bag and laggage, in order to make room for us, and had gone to Government House, learing his comfortable bungalow entirely at our disposition. Some of the gentlemen, for whom there was not sufficient room, went to another bungalow not far distant.

Monday, April inth. -We were all up early, anxious to make the most of our time in this pleasant spot. Tom went
off for a ride with the Governor, while Mabelle and Baby took a long walk with Mr. yon Donop (the Secretary) and Mr. Callaghan ; and Muriel and I proceeded to the top of the hill to see the Doctor. Some of the gentlemen went off shooting, and did not return unlil late in the day.

I had been very anxions to go to the black liird's-nest

IIf Filant's Buaf́alow
caves of Gomanton, but was assured by evergbody that the difficulties would le lound insurmountable. All agreed that it was absolutely necessary to await the return and the report of Messrs. Walker and Wilson, who had gone to Gomanton to survey the road and to ascertain the practicalitity of utilising the vast quantity of the excellent guano with which the
floor of the caves is thickly covered. A shorter expedition has been therefore proposed, and it is arranged that we shall cross the bay and look at the hilian-wood cutting. The party divided, some going in the steam-launch, and some in Captain Flint's boat to a pienic on the other side of the hay. The distant views of Sandakan are rery fine, as is also the aspect of the north bluff of the island of Balhalla, where the best white hirds'-nests in the world are found, and are collected at terrible risk to lile and limb. We glided throngh a perfect archipelago of small islands, where we saw curious houses, inhabited by Bajans, or sea-gipsies. These lunts are bailt on piles in the water, and round them dart the natives in their tiny canoes, throwing spears at the mumerons shoals of fish. So pleasant had been the royage that we seemed to reach our destination almost immediately. It was a long unfinished pier, composed of a lew split Nipa palms fixed, at intervals of a couple of feet apart, on piles driven into the bed of the river. This primitive jetty stretched far out into the stream, and was reached by a ladder of the same rough style, with a space of at least two feet between each rang ; not at all a landing-place for ordinary mortals-European, at all events -and only suitable for angels, Dyaks, or monkeys. Nevertheless it is the timber-loading station for ships trading with Sandakan, and stands at the mouths of Sapa Gaya and Snanlamba Rivers, down which most of the best timber is floated in ralts or towed by steam-launches from the interior. Fortunately some native prahns were drawn up alongside the pier, and into these we stepped, and so got ashore, climbing up the steep bank to the cosy little bungalow above. There we found Messrs. Walker and Wilson, now on their way back from the cares, of which they gave an interesting description. They seemed, however, to be firmly impressed with the idea that it would be impossible for us to visit them, the difficulties of the expedition being far too great for anyone

Kapuan Timber Station
came on suddenly during our visit. The effect of the storm was very grand, as the heary douds came rolling up the bay to discharge their burden of electricity and rain just over onr heads; but the moment it passed, out came the sum as brightly as ever. We had a most cheery picnic in the little five-roomed bongalow. The one piece of furniture, except the table and two chairs, which our hosts had brought with them, was a comfortable hammock-cot, of which the children at once took possession, to make a swing. While we were sitting in the deep verandal, a steamer arrived alongside the pier, towing several rafts, which we saw unlashed and pulled to pieces in true primitive fashion, the heary bilian-wood or ironwood of which they were composed being simply cast into the river, as near the shore as possible, to lee fished out at low tide. Bilian-wood when newly cut is of a dark sand-colour, and, being hard and durable, is used for puposes where those qualities are required.

All pleasant things must come to an end, and we were soon obliged to start again on our return voyage. We shipped Mr. Walker and Mr. Wilson on board the steam-lannch and towed their hoat. All went well till we got near the entrance to the Bay, where we encountered such a high sea that we had to cast the boat adrift to prevent her from being swamped. We stopped at the yacht to give our friends an opportunity of seeing lier. Nearly all the crew, and eren the stewards, were ashore at rifle-practice. Sereral visitors came on hoard and detained us for some time ; so that when we landed we were only just able to have a look at the Musemm and get up to Mr. Flint's bungalow in time to dress for dinner at Government House, where we found quite a large party of gentlemen assembled to meet us.

None of our sportsmen turned up to dimer except Mr. Cook. Afterwards varions linds of dances were performed by the natives for our entertainment. In some of the war-
dances the men displayed much agility and gracefulness, darting from side to side in their war-cloaks of toncans' feathers, which floated out behind them with each movement. They were armed with shields, spears, and lireises. It was really a most picturesyue scene, and the large open rerandah of Govermment House, with the background of sea, sky, and distant

mountains, seen in the lright moonlight, with the 'Sunbeam' peacefully at anchor in the foreground, formed an appropriate setting. The Dusuns and Sundyaks are very fond of dancing, and seize every opportunity of indulging in the ammsement. In times of abmondant larvest, it is said, dancing goes on in every village all night long, and night after night.

Tuesday, April izth.-Mabelle and the children went out for a ride this morning, while Tom and I paid a visit to Dr. Hoffmeister, whom we found much better. It was very hot work walking down to the shore again, and even the children seemed to find the temperature rather trying. Fortunately for the imhabitants of Sandakan, the nights are always cool, a fact to which the little commmity owes its excellent health and the preservation of its strength and energy.

In the course of the morning we visited the town to see the hazaars and have another look at the Museum. There is a fish and general market at Eleopura, besides Govermment buildings, barracks, a hospital, hotels, several stores, and a club, to say nothing of a small temporary church, a mosque, and a joss-honse. On the green in front of the Government building stands a handsome Irish cross, raiser to the memory of poor Frank Hatton and other explorers who have perished in North Borneo. At the Goremment Offices we found a few interesting cmiosities, particularly some finely woven mats that had been prepared in the interior for the Colonial Exhibition in London but were not ready in time; an elephant's tusk of enomons size, and some teeth found in the jungle near here. This collection will doubtless form the nucleus of a larger museum. It comprises also gems, weapons, rat-traps, bird-calls, eggs, stuffed orang-outangs, and specimens of native stuffs and mats. The sarongs from Java and Celebes are very curions, the pattern being elaborately worked in a sort of thick coloured wax, which makes them quite stiff. Some of them are expensive, costing sixty or serenty dollars eacli. There did not seem to lee any of the curious fire-tules for producing fire which we had seen in the Musemm at Kaching.

I returned early on board the 'Sumbeam' to complete the arrangements for resuming our voyage this evening. Further deliberation has convinced us that the visit to the Gomanton

Caves is quite out of the question, notwithstanding the kind offers of assistance which we have received lion Mr. Treacher and wthers. We lave acoordingly decided to content onrselves with an attempt to reach the Madai Caves in Darsel Bay, which are said to be somewhat easier of access. Mr. Treacher, Mr. Crocker, and Mr. Callaghan have offered to accompany us, and to engage the refuisite men for the expedition.

There mas a large party to lmnch at Government Honse, and more came in afterwards to attend my informal Ambulance meeting, at which the Governor took the chair, and Tom explained the work of the society. I also ventured to say a few words, and Mr. Crocker supported the movement very cordially. Escryboly in Eleopura was present, lesides many from Kulat and silam, and all seemed interested in the sulject. Dr. Walker took the scheme up rammy. I earnestly hope it may go on and prosper. There can le no country where it wonld be more likely to be of use, consilering the wild sort of life people have to lead here. I presented the new centre with a roll of anatonical drawings and a good many books and papers. I trust, therefore, that we may regard the Eleopura branch of the Ambulance Association as fairly started.

After the meeting, feeling very tired, I went in my chair with Mr. Wilson to the church, which is a pretty little building, and thence, a little higher up the hill, to the hospital. This appears to be an excellently well-managed institution, but is still sadly in want ol a Enropean ward, especially in viers of the fact that the trade and population of the place are rapidly increasing. Ascending a lew steps higher we arrived at the club, with its deep verandahs and spacious windows and doors, arranged to catch every breath of air, and to command the finest riews. The cemetery lies in another valley right behind the club. It is a pretty spot, nicely kept, and quite away from the town.

Altogether，the practice may he regarded as lighly satisfactory，considering how long it is since our men have had an op－ portunity of handling a rifle．I distributed certificates of efficiency，and then we all went back to an early dimner at Mr．Flint＇s， after which we had to re－embark．The nice－looking Siliks who are in charge of the convicts liere having carried our lug－ gage down to the boats，there was nothing for us to do but to say good－bye to our kind hosts，and return to the＇Sumbeam＇ once more．We found her lying alongside the wharf，where she had come to take in water，and ＇quite crowled with our new friends，who were determined to see the last of us，and who almost all brought us some little curio to keep in remembrance of our risit to Sandakan．The tide was low，and it was no easy task to get down to the deck of the yacht from the some－ what lofty pier．At last we were safely on hoard，and slowly steamed array，amid a volley of ringing cheers，which we re－ turned by sending up line lights and flights of rockets．

The carrying capacity of the yacht was now rather severely tested，for in ad－ dition to our orm party we had Messis． Treacher，Crocker，and Callaghan as pas－ sengers，besides some thirty Sikhs，police－ men，coolies，and others，whose services would be reguired for the expedition to the Madai Caves．

Wednesday, April i 3 th.-Oppressively hot. We made Tanjong Unsang at daylight, and steamed southward and westward along a fine coast. At noon we had come 135 miles, and were in lat. $4^{\circ} 57^{\prime} \mathrm{N}$., long. $118^{\circ} 47^{\prime} \mathrm{E}$.

All hands were busily engaged during the morning in preparing the large cutter for Tab's projected shooting expedition this afternoon. She is a fine big boat, temporarily fitted with a ridge-roofed awning and boards on which beds can be placed, thus making her almost like a house-boat. Everything that could be thought of as likely to be wanted was put into her; but notwithstanding all that foresight and care could do, I felt rather uncomfortable about this lonely and somewhat risky enterprise.

In the afternoon we steamed down a little out of our course towards the island of Timbu Mata, which is said to abound with deer and wild pig, to drop the cutter with Tab and four men from the crew in her, all armed with rittes, cutlasses, and revolvers, besides their sporting weapons. Then we proceeded on our course to Silam in Darvel Bay, 175 miles from Sandakan, where we anchored about 6 p.m. A prahu came alongside at once, manned by natives, and having on board a specimen of the worst type of rough Anstralian gold-diggers-very tipsy, poor man, and very anxious to come on board the yacht. His efforts in this direction were, however, repulsed, and we finally induced the native crew to take him back to the shore.

Darvel Bay is a most lovely spot, and in the sunset light I thought that I had never seen anything more beautiful in the world. We went ashore as soon as possible, having, however, first to climb with extended though uncertain strides up one of the dreadful wide-runged ladders which confront us at every pier. This performance landed us on what appeared to be a very rickety kind of platform, with, as usual, a great deal of open space in the flooring. Being assured that it was
quite safe if we only stepped out boldly and with confidence, we adranced as well as we could, and fomd the task not so difficult alter all, thongh it most be confessed that the flooring soemed terribly springy and clastic. The two small dogs were carried, but poor' 'Sir Roger' was left to follow us as best he cond, meeting rith many a slip and many a tumble on his

Enteriné River IIadai
way. It was too dark to see much of the town, which appeared to be clean and tidy, with several well-furnished shops in the principal streets. There is also a Govermment station here, and an experimental garden. The harbour is well sheltered, and although it contains a good many coral-banks, vessels drawing sixteen feet of water can anchor quite close to the settlement.

The reports of explorers in search of gold on the Segama River are satisfactory. A road is now being constructed which will render access to the gold-fields much easier than at present. It is, however, impossible for Englishmen to work the fiells, and Chinese labour will most likely have to be employed. The process adopted by the natives of extracting the gold is primitive in the extreme.

We met our friend the Austratian digger again, and heard that he had come down from the fields with three companions, all ill with fever, one being so bad that he had to be carried all tho way. Still they were satisfied with their success, and were now celebrating it by drinking their profits away as fast as possible.

After strolling slowly up to Mr. Callaghan's comfortable bungalow, we rested a little and had tea, and then returned on board to pack up and make ready for our early start tomorrom. The steam-launch was already afloat with her boiler in her, but a good deal had yet to be done in the way of preparing the gig, fixing the arming, and stowing the stores, photographic gear, se.

Thursday, April i4th.-It was nearly midnight before all had been arranged in readiness for our early start and possible camp-out for at least one night; and even then there was a great deal that had to be left unsettled, precise information as to roads, rivers, distances, and so forth not being easily obtainable in this partially developed country.

At 3.30 a.m. I was called, and tried to dispel my dromsiness by the pleasing conscionsness that an expedition to which I had long looked forward with such deep interest was about to be mudertaken, and, as we had reason to hope, through the kind exertions of Mr. Treacher and Mr. Callaghan, duly accomplished. An hour later, these two gentlemen, accompanied by Mr'. Crocker, came on board; and then we started directly in a long native canoe, with a crew and escort
 Dyaks, and policemen. Our destination was the lamous caves of edible hirds'-nests at Madai. The steamlaunch, well laden with extra coal in bags, and a few spare coolies, led the way, having in tow the heary gig, filled with provisions of all sorts, and materials for camping ont. Then came the long praliu -also in tow-laden almost
to the water's edge with her thirty passengers and their gear. The extent and weight of this little flotilla reduced our progress to a speed of about five knots. It was a perfect morning, and the air was quite calm except for the slight breeze which we created for ourselves as we frogressed. Soon after seven o'clock the sum became unpleasantly hot, and we were glad to spread our awning. At eight we breakfasted extremely well, the necessary cooking lueing done over a small spirit-lamp, in the alisence of kerosene or any of
the mineral oils, the use of which is not allowed on board the 'Sunbeam' or any of her satellites.

A little before nine we reached the mouth of the river, and safely accomplished some intricate navigation through narrow channels beetween coral reefs. The mists were still lying in solid white masses in the ralleys and between the mountain peaks; but the small densely wooded islets that dotted the bay were mirrored in its unruffled surface. The scene was altogether most picturesque, and reminded me a good deal of the splendid harbour of Rio; but without, of course, the Corcovado or Sugar-loaf Hill, or those euriously shaped Organ Mountains in the background. Once in the river, the view became quite different, and much more shat in, owing to the dense walls of mangrove and other tropical regetation which lined either side of the wide stream, up which the tide was swiftly flowing. The air now seemed fresh and pure; but in other states of the tide it is, I am told, very much the reverse.

In about half an hour we reached a junction of two streams, where the boats composing our flotilla had to part companythe steam-launch to be left behind, the prahu to lead the way, and the cutter to be paddled and punted up alter us as far as she could go. This point proved to be only to a small landing-place, at which eight prahus were drawn up near two temporary wooden kajang huts belonging to the lird's-nest takers, members of the Eraan tribe, to whom the cares are let. Birds'-nests, it may be remarked, are a profitable property, yielding a royalty of 15,000 dollars, or over $2,500 \mathrm{l}$. a year, to the North Borneo Company.

From the catter we embarked in the prahn, and from the prahu we finally landed in a swamp, where an hour's rest was allowed for the coolies to get their food, whilst we completed the arrangements for our return voyage, which, on account of the tide, promised to be much more difficult.

At 10.45 1.m. we commenced the real hard work of the expedition. Ereryone walked except me, and I had to be carried in a very light chair ly two coolies, who were frequently relieved. It was rather serious work for the learers-to say nothing of my feelings-for they had never carrien a chair before, and the way lay through thick jungle, constantly interspersed by morasses and swamps, and obstructed by fallen trees, overhanging branches, thorny creepers, and marshy streams. At first I had many misgivings, but soon gained confidence when I saw how careful the men were, and how anxious to aroid an accident. Two coolies went on in front, and with their sharp parongs cut down or lacked away the more serions ohstacles. If either the chair or I caught in a tree or a thom, or if any special difficulty presented itself, somebody appeared from somewhere and rendered pronpet assistance.

I scarcely know how they managed to make their way at all through the dense jungle which hemmed us in on every side, or to disentangle themselves from the numerous obstacles which beset our path. If one of the bearers suddenly phuged up to his waist in a morass, someone else instantly came forward to pull him out and to raise the chair again. When huge fallen trees obstructed the way, one or two men rushed forward to assist in lifting the chair and me over the larricade. In less than two hours I had been borne orer an intricate and fatiguing path, up liill and down dale, with frequent changes but with no stoppages, until at last we fairly faced the limestone cliffs which we had seen from the distance rising straight out of the jungle. We had passed, and in fact followed for some distance, the fresh spoors, eighteen inches in diameter, of an elephant, the sight of which caused great excitement among the natives, esjecially when we met other natives armed with gims.

One lird's-nest taker whom we passed had just seen

two elephants, and a great palarer ensued, in which the word 'harden,' or some such equivalent for ivory, frequently occurred. Many of the trees on the line of route were very fine, specially the tapangs, the splendid stems of which, supported by natural buttresses, rose in several instances at least tro hundred feet from the ground, unbroken by a single branch. In the stem of the tapang the wild bees build their combs, and beestrax is an important and raluable product of the conntry. These trees, either singly or in groups, are the property by inlieritance of the natives; so that whenerer any attempt is made at clearing, or even
cutting down a single tree, one of these small proprietors is sure to come forward and swear that his interest, derived from his father, his grandfather, or some even more remote ancestor, is likely to he affected. The timber itself is vatuable, and where two buttresses occur exactly opposite to one another the width of the tree is often so great that large slads, with a fine grain capable of taking a high polish, and farge enough to form a dining-table for twenty-four people, have been cut from them. The Borneo jungle is so dense, and is so completely overshadowed by the trees rising from it, that there is no modergrowth, and the effect of bareness is produced ; thongh I dare say that, if one contd onty took down on the forest from the car of a balloon, the flora of creepers, orchids, and parasites wond be very beantifut wherever the hight and air conld penetrate.

Presently we came across a good subject for a sketch. I ras waiting at the edge of a broad and winding river', shaded by tall trees, and flowing over a gravetty leed, white two men went on in adyance to somed the depth of the stream before attempting to carry my chair across. Just then two hunters appeared from the forest and seated themselves on large mossy bontders a short distance apart. They put down beside them their baskets and bundles of nests, their little mat travelling-bags, and their elaborately carved and cased spears, hoteling fast to their kreises, parongs, and bows and arrows. They were literally armed to the teeth in their orm fashion-a rery formidable fashion it is too-and I very much doubt whether the gun which one of them had tying beside him was not the least terribte weapon which he possessed, so skilled are they in the use of their simpler implements of the chase and of warfare.

Continning onr difficult way, we at last emerged from the green darkness of the forest and found ourselves within view of the limestone rock or mountain in which are the marvellong
bird's-nest cares which we had come so far to see. The cliff presented a striking effect, rising white and shining in the bright sunlight, slightly veiled by the tall trees and creepers, the leares of which shimmered in the hot noontide haze. The dark entrance to the caves, stuffy as it was, and obstructed by the curious framework of rattans on which the nest-hunters sleep and cook and stow their arms, was a pleasant relief to the heat and glare without. Still more welcome was the sight of the coolies loringing refreshments and cooling drinks. If I, who had been carried all the way in comparative luxury, felt glad to see them, if can be imagined what must have been the feelings of the rest of the party, including Nabelle, who lad walked the whole distance, and struggled gallantly over a most uncertain and treacherous forest track. We were not aljle to get into the care at the opening where the men were encamped, and had to go some way round to another entrance.

From this point, each provided with a candle to light our way, we advanced into the darkness, stumbling, sliding, and occasionally falling on the slippery rocks, buf still able to admire the nolle proportions of the caves, their lofty grandeur, and the fantastic shapes of the limestone pillars loy which the vaulted roof was supporfed. The whirring, fluttering, and twittering of many birds and bats could plainly be heard in the larger caves, which were densely peopled with winged and feathered inhalitants, and the roofs and sides of which were blackened by their nests. The Segama River, which we had ascended earlier, flows through these vast caverns, sometimes over a hard, stony bottom, but oftener orer or through a mass of guano many feet in thickness, into which our guides more than once sank suddenly, emerging in a state which can be better imagined than described. Split palms were laid across the most awkward places; but it was extremely difficult to keep one's footing on this primitive canservay, and despife
the assistance of the gentlemen, who carried me across many of the streams, it was impossille to escape an occasional wetting.

At one point the guides and feading members of the party, going on rather too rapilly, left us in complete darkness, and after waiting some time in the hope that they would discover their mistalse and return, we had no alternative but to struggle up a most fearful precipice towards the only ray of light which we could see in the distance. It really was hard work, not only on account of the steepness of the ascent, but of the stippery and slimy condition of the rocks. Sometimes we knocked ourselves with painful abruptness against hard projections, at other times we sank to our linees in a mass of soft, wet guano teeming with animal life of various linds, but mostly of the biting or stinging character. Mr. Crocker stipped and felt down some thirty feet or so, but fortunately emerged unhurt, though covered with btack slime from the crown of his head to the sole of his foot.

After tremendous exertions we reached the end of our climb, during which I had been not only once but many times sorely tempted, and even strongly urged, to turn back. When we pansed to rest, our eyes, by this time accustomed to the dim religious light, could perceive hmman figures crawling and clambering about the roof and pinnacles of the rast cavern in which we now found oursetres, and conld observe many narrow rattan ladders hanging in the most precipitous places, or stretching horizontally across ahmost mfathomable abysses.

Fixed among the rocks on erery side were strong hooks and pegs, to which the intrepid monkey-like mest-hunters attach their long, swinging ladders. Clinging to these, they proceed to prod all the nests within reach with a long bamboo pole, split into the shape of a three-pronged fork at one end, with a candle attached. They easily detach the nests, and rapidty
transfer them to a basket hanging ly their side. Having cleared the accessible space around them, they then mohook one end of their frail ladders and set themselves swinging like a pendulum, until they manage to catch another hook or peg, and then proceed to clear another space in the same way.

All this goes on throughout the day, and very often throughout the night as well, for the birds are then at home, and by their appearance the natives can judge more accurately of the age of the nests, on which their value depends. Occasionally, but not rery often, a ladder breaks or a peg becomes rotten, and the hardy climbers tumble into the depths below, with almost invariably fatal results. The ladders employed are sometimes, I was told, as much as 500 feet in length, and we saw some ourselves over i 50 feet long. Truly the seekers after birds and their belongings, whether eggs, feathers, or nests, are a daring race, alike on the storm-beaten cliffs of St. Kilda and of Norway and in the mysterions cares of Borneo and of Java.

Imagine our disappointment when, after another severe effort, we reached the fissure in the rock which admitted the light from abore, and found that it afforded no means of egress except for bats and birds. Not even a Dyak or Sulu could have squeezed his way in or out by it, and there was nothing for it but to retrace our steps. Fortunately, howerer, we had not gone far before we met our guides with lights coming at last to look for us, and they led us to a comparatively easy exit from the care; though in order to reach it we had to pass orer horrible morasses of guano, into which we were only prerented from sinking by a path or bridge of two-inch palm stems affording a most uncertain foothold. On the way we passed more nest-hunters, and at the mouth of the cave we found another camp of wooden framework huts, on the top of which lay several men smoking, with their kreises, parongs,

spears, and travelling-bass of matwork beside them. 'They would not part with any of their weapons or implements, even for more than four times their value, alleging that it would bring them ill-luck to sell them while engaged in an expedition, but adding that if we would go to their village, after their return, they would not only sell but willingly give us anything we might take a fancy to.

In the comse of our descent from the cave we came across ten or a dozen bilian-wood coffins, which were excarated in this spot about fifty years ago. They were of the plainest. possible make, and were evidently rapidly falling to pieces. It is thought that further excarations will lead to the discovery of finer and older coffins, for it is almost certain that wherever these caves exist they have been extensively used at one time as primitive burial-places.

Arrived at last by the side of a clear ruming stream, we were glad to take the opportunity of performing some muchneeded ablutions, and to rest for a while. How tired we all felt I need not attempt to say. It required, indeed, a great effort of the will to take a few photographs and to carefully pack the bitds' eggs and nests which we had collected, betore resmming our journey.

We were all sory when it was time to leave our pleasant halting-place at Madai and start on our homeward way. The path through the jungle was, however, delightfully shady, and was altogether easier than our upward course. The last view of the cave, looking lack from the little hill facing it, just Jefore entering the jungle, will abways remain in my mind, though I saw it somewhat hazily through the ganze reil in which my head was wrapped up, in order to protect me lrom the hornets, which had already stmog several of our party severely.

I have before now been in tropical forests and jungles, and they always produce the same awe-inspiring, and indeed
depressing effect. The almost solid green walls on either side of the narrow track; the awful stillness which prevails, only occasionally broken, or rendered more intense, by the shrill note of a bird, the cry, or rather pitifnl wail, of a monkey, the crashing of some larger creature throngh the dense undergrowth, as well as the profound solitude, will easily accoment for these feelings.

Sulus at Sylam, Borneo Having overcome my first sensation of nervonsness, cansed by constant slips and slides on the part of my bearers, I had an excellent opportunity for contemplation until, in little less than two hours after learing our last halting - place, we reached a spot close to where we had landed.

It was delightful to find that in our absence a charming little house had, by a piece of kind forethonght, been built for us on the Janks of the clear rumning stream. Raised as if by an enchanter's wand, this hut in the jungle was an inestimable comfort, and enabled us to rest quietly for a short time. At first it was proposed that we should certainly dine and possibly sleep in it ; but when it was remembered that, pleasant and picturesque as might be the situation, we were still in the midst of a malarions mangrove swamp, prudent considerations pre-
railed, and it was decided to more on. After giving time, therefore, to the coolies to cook and eat their well-eamed repast, everything was put into the prahn, which lay half in and half out of the water. Mabelle and I then seated our-

selves in the centre of the boat, while everyhody else pushed and shouted; some malking, some wading, some occasionally swimming. Thus we proceeded down the shallow stream, the prahu frecuently on her beam-ends on one side or the other, until righted ly friendly hands; shipping comparatively little

Water, but still taking in enough to make everything damp and mecomfortable.

It was a curions sight, the long boat, pushed by fifty or sixty natives and about a dozen Europeans, now in the water, now almost out of it. More than once I thought the natives must have been jammed between the bank and the boat when they slipped into a deep hole, and the great length of the prahu prevented her from turning quickly. At the nesthunters' landing-place we found ourselves fairly high and dry, and had to be carried, prahm and all, for some little distance until we reached the deeper water beyond, only to find our further passage blocked by the trunk of a huge tree, so firmly imbedded in the mod that the mited efforts of our large land of followers were powerless to move it. We had therefore to lee pulled and hanled over the obstacle-a leat accomplished with much shouting and hullabaloo. First our long sharp prow rose in the air, submerging our stern, and taking, of course, some water on board ; then the process was reversed, and we went bows under. At last we emerged guite safely and in deep water. Most of the swarm of swimmers quickly scrambled into the hoat and converted themselves into paddlers, while the remainder swam ashore and either waited on the bank for the return of the prahu or shouldered their kajang mats and cooking-ntensils, and trudged off again through the swampy jungle to the little rest-house which we had quitted a short time before. In the fast-fading twilight the scene looked picturesque and characteristic.

Resuming our now rapid voyage down the stream, we presently reached the spot where our own boats were waiting for us. Mabelle and I at once took possession of the cutter, the gentlemen of the steam-launch, and all proceeded, as far as circumstances wonld allow, to change our wet and dirty clothes. Then we joined company, and as soon as the praho had discharged all her passengers and cargo our little flotilla
proceeded in the original order down the river. On the way we enjoyed a capital little dimer, commencing with small fish about three inches long speared by a boat-hook, and concluding with quite the most delicious pine I erer tasted, grown in the experimental gardens of Silam.

At last we reached the mouth of the river, and were once more on the hosom of the open sea. Rather an agitated bosom it was too, just now, heaving in such a mamer as to toss the cutter about a good deal and threatening to completely upset the native boat with its heary load. In fact, the prahu behaved in the most alarming mamer, absolutely refusing to steer, and turning luroadsile on to the constantly increasing swell. Our native pilot, too, in the sterm-launch, did not mend matters by steering a very erratic course, and going a good deal further out to sea than wats necessary. The islands, howerer, soon afforded shelter, and the moon rose over a scene of comparative cahmess and repose. Most of us took advantage of this condition of things to rest a little after the labours of the day, and we fom ourselves actually alongside the yacht lefore we had any idea we were near her. It was exactly half an hour after midnight, and Tom was delighted and greatly relieved to see us, haring quite abandoned all hope of our appearing until the morning, amd haring conjured up all sorts of gloomy forebodings as to the ill-eftect of sleeping in mangrove swamps, besides attacks from hostile natives, and other horrors. The three gentlemen went off in our launch, towing the prahu, after receiving our warm thanks for the great trouble which they had taken, to which we were entirely indebted for the success of a most interesting expedition. With a grateful heart for pleasure emoyed and difticulties orercome, I went to bed, completely worn ont, at the end of what may fairly be regarded as mother rel-letter day of the present cruise.

Tom had been undble to accompany us on our expedition,
considering it a pullic duty to put together the very interesting information which had been commmnicated to him by the authorities charged with the administration of affairs at the numerons ports at which we had tonched on the coast of Borneo. He wished to complete his work, so that it might be read to Governor Treacher before being despatched to England. [This paper appeared in the 'Nineteenth Century.']
 seven this morning ready to go ashore with Tom and Mabelle to say good-bye to our friends, and to see how Silam looked by daylight. It is a neat, picturesque little village with most of its wooden houses standing upon piles. Landing was, as usual, a difficult matter, for there was nobody to hold the loat, and no one to help us. The people in Darvel Bay have evidently very
little curiosity, for they scarcely turned their heads to look at us, though European ladies have rarely landed here before. Near the shore, little shops, mostly liept by Chinamen, are estallished on either side of the pier. Their exterior is not imposing, but inside a very fair display of goods is to be found.

The hay looked quite animated this morning, a fleet of small boats having arrivel during the night, filled with Sulus, Eraans, and Bugis. Each boat carried enormous outriggers projecting on either side, and had an awning thatched with kajang mats; while dried fish, arms, gongs, cooking-pots, bags, and odds and ends of all kinds hung from the poles which supported the roofing. A great deal of barter was going on on shore. At the first shop I rent to I saw one ol the bird'snest collectors whom we had noticed yesterday pitch down a bundle of nests on the floor without saying a mord. The Chinaman at once fetched some weights, weighed the nests, and mentioned the price in one word. Three words escaped the nest-hunter's lips, which resulted in the production of sundry loright-coloured cotton Manchester cloths, some evidently modern lireises (probably made at Birmingham), besides liird-calls and pipes. In the next shop were two dapper little Sulus in Spanish-looking costmmes, with dozens of pairs of the golden-edged pearl-shells, which we had searched for in vain the night luefore last. The bargain was not yet concludel, so that it was useless for us to try to trade. The shells, being bought and sold by weight, are handled rather roughly ; but it was in rain that I endeavoured to persuade them hy signs not to throw them about so carelessly at the risk of breaking their delicate edges. I did at last, however, succeed in getting some good specimens, finer than any we had yet met with. In the same shop were also some Bajans, or seagipsies, whose stock-in-trade consisted of a miscellaneous collection, including dried trepang, strings of very uninviting
dried fish, smaller pearl-sholls, little skins of animals and hirds, and lattan canes in the rough, but much cheaper and better than those to be bought at Singanore or clsewhere. The rattan is the stem of a creeping prickly palm, the scientitic name of which is the ratumus. The rotan stym is the ordinary rattan of commerce, but there are several others of more or less value.

We walked up to the bungalow along a grassy path with lides and calves tethered on either side. Alas! their mothers had not yet returned from the mountains, so that the promised supply of tresh milk and hutter to which we had been looking forward was not fortheoming.

Our friends at the hungalow were up and dressed, and none the worse for their fatigues of yesterday. Having mutually congratulated each other on the success of the expedition, we heard how lucky we had been in escapimg the borneo pest of leeches. It has not been raning much lately, but in wet weather they are worse than in Ceylon. Not content with attacking the passing traveller from the ground, they drop down from every branch or leaf, and generally the first intimation of their presence is the sight of a thin stream of blood oozing from their point of attack. If an attempt to pull them off be made, their heads remain fised in the flesh and canse festering rounds. The only way of getting rid of them is to apply a little salt, a bag of which is always carried by the natives when going on an expeclition into the jungle. Strong tobacco-juice is another remedy.

We had now to return to the boat, and to re-embark in the 'Sunbeam,' leaving the curios which we had purchased to be sent home by the earliest possible opportunity. Our friends complimented us with a salute of nimeteen guns; to which we could make but a feelle return, as our armament only consists of two brass guns for sigmal purposes. None the less did we quit the shores of North Borneo with gratetul appreciation of
its beauties and a rivid sense of its comntless undeveloper riches of every kind. Pleasant reminiscences of almost everything diu we carry away with us, except of the intense heat, which I believe has been rather unusual this year, even the oldest inhabitant complaining nearly as much of it as we did. Just at the last moment the steam-launch 'Madai' arrived from Sandakan for Mr. Crocker and Mr. Treacher, bringing letters and presents of flowers, as well as things which we had accidentally left behind. She appeared to he a frail little conveyance for a voyage of so many miles under such a broiling sun, and a good fast vessel something like the Pajah's 'Lorna Doone' seems needed to maintain regular communication between the various ports of North Borneo, Brunei, Labuan, and Singapore.

We got muder way at $S .45$ A.m., and were much relieved when, at about ten o'clock, the cotter was descried in the distance, and still more rejoiced when we picked her up between the isles of Tinbu Mata and Puln Gaya. Tab came on boarl directly, looking very well, but tremendously sumburat, as were also his four companions; but all were in great spinits. They bronght with them two deer, of which the meat was too high to be used. It seemed that the shooting party had not been able to reach the island on the day they left us, for the 'Gleam' draws a good deal of water, and the passage was intricate and shallow. They therefore slept combortably in the hoat, and in the very early morming, seeing deer grazing, they landed, ascended a hill, and shot two of them. They also saw a good many pigs, but could not get any. Soon afterwards the Suln chief and his followers, Whom we had sent to look after the sporting party, arrived; the chief waving the letter, of which he was the bearer, in his hand, in order to allay the apprehensions which his appearance might naturally arouse. He and bis people quickly spread themselves over the island, shouting, and waving white
flags, in complete disregard of all the usual rules of civilised deer-stalking. Of course no more game conld be got that day, for it was impossible ly signs to stop the noise. While two of our men were out in search of deer, they were alarmed by the appearance of some canoes from the mainland, containing thirty or forty natives. They proved, however, to he only harmless fishermen in search of the great tepai mother-of-

pearl shell and smaller black oyster-shell, in which pearls are found, and which abound on the shores of the island. The night was again passed on board the cutter, and this morning another unsuccessful deer-hunt took place. They found waiting in the sun to be picked up by us the hottest part of the entertaimment. The tea had unfortunately been left behind, but they had some very good cocon. Which supplied its place. At 9 p.n. we rounded the north end of Siluco Island and
passed through the Sibuco Passage, entering the Celebes Sea at about II p.m.

Suturlay, April a 6 th.-A rery hot day. At noon we had steamed 235 mites, and were in lat. $2^{\circ} 47^{\prime} \mathrm{N}$., long. i $19^{\circ} 3 z^{\prime} \mathrm{E}$. Busy settling down alt day. Rather an anxious time as regards mavigation. Tom spends most of his time in the foretop. About io p.m. we entered the Straits of Macassar.

Throughout the day we had been exposed to the danger of collision with the numerous submerged logs and trunks of trees carried down by the river Koti and floating on the surface of the sea. The current must be tremendously strong in this river, which gives its name to a large tract of country; for not only are trees and logs washed down, but huge clumps of Nipa and Nebong palms, looking like (what they really are) smalt floating islands, are carried out to sea with their numerous feathered inlabitants. More than once when a sail had been reported in the offing, it proved to be one of those masses of vegetation, the branches and large fan-shaped teaves of which presented a deceptive likeness to masts and sails. Those which can be seen are not dangerous; it is onty the hatf-submerged logs, almost invisible, yet large enough to sink a ship, for which a careful took-out has to be leph, both in the rigging and on the bows. In fact, we were going stow and laalf-speed afl day, our course having constantly to be changed to avoid these obstacles. Our arrival at Macassar may therefore be considerably delayed.

Sumlay, Amil I $7^{\text {the }}$.-Another fine calm day, but intensely hot. We crossed the line about 7 1.ar., and soon after eight sighted the high land of Celebes.

Momeday, April i8th.-At 4 p.s. we were off Cape Katt; at 8 p.nr. off Cape Madai. At noon we had come 2 I I miles under steam, and were in lat. $4^{\circ} \mathrm{I} 4^{\prime} \mathrm{S}$., long. i $18^{\circ} 43^{\prime}$ E., being eighty-three miles from Macassar. Only the faintest breath of air could be felt, and eren that soon died away. The saits

which had just been set had therefore to be taken in again, and we proceeded as before under steam. This little experiment delayed us somewhat, but gave everylody on board some exercise.

Tursilu!!, Aprit 19th.-At daybreak we found that we had drifted far to the southward during the suilden squalls and constant shifts of wind in the night. The currents hereabouts are exceedingly strong, and the soundiugs taken early in the morning proved that we were in unpleasantly shallow water-in fact, ahmost touching what we made out to be the edge of the Spermonde (?) Archipelago. Tom was at the masthead, endearouring to pick up some landmark. At last he was able to dislinguish the highest peak marked on the chart to the south of Macassar; whereupon he fearlessly gave the order to go full speed ahead in a NN.E. direction between that island and Satanga. This was much pleasanter than groping about by means of soundings, and it was a great relief to think that we were at last fairly on our course for Macassar. The
scenery became lovely, and at 12.15 A.m. we reached our destination, and dropped anchor near the lighthouse.

The approach to the Dutch town of Macassar is very fine, and no doubt the beauty of its situation, as well as its convenience as a place of call for ships of all nations, caused it to be selected as the first European port in the East Indies. The roadstead was fairly full of shipping, which included a gunboat, one or two steamers, and several large sailing-ships. Pratt went ashore the instant the health-officer and harbourmaster (these officers being combined in one person) had left, in order to find out the capabilities of the place; for we had been unable to gather anything from our first visitor, who could not speak a word of anything but Dutch, and contented himself with handing in a bundle of ship's papers, printed in every known language under the sun, and allowing us to select therefrom the one which suited us. Pratt soon returned, reporting, to our joy, that there was an ice-making machine ashore, and that, although it was only a little one, and would take nearly thirty-six hours to make the required quantity, we were promised a thousand pounds of ice by 7 A.m. to-morrow, or halt as much again by one o'clock. After some deliberation the latter arrangement was agreed to.

About four o'clock we all landed, and under the guidance of the best interpreter to be found-a Chinaman who could speak nearly twelve words of English-we set off to inspect the ancient Dutch East Indian town. It is the oldest European settlement in the Eastern Archipelago, and has the air of respectability which belongs to old establishments of every lind and in every part of the world. In comparing Macassar with Singapore, it must be remembered that under Dutch administration the community is lett in a much greater degree to its own resources. Of the results of the two systems of government, in relation to the general prosperity, there is

no room for doubt and uncertainty. The exclusive policy of the Dutch, the obstacles opposed to commerce, when not carried on under the national flag, have produced a lethargy and stagnation, with which the marvellous growth of free and untrammelled trade at Singapore offers a striking contrast. The Dutch have but a slender hold over the Celehes. The physical contiguration of the island is singularly stragghing. To this circumstance it is probably due that the population is dirided, both in race and language, into several distinct tribes.

Outside Fort Rotterdan a large lerel space is reserved as a pullic park. Its drives are shaded by fine arenues. In the outskints of Macassar the streets become lanes, passing through rich groves of tropical regetation. The slender dwellings of the native population, formed of matting stretched on a light framework of bamboo, are seen peering out from underneath the orerhanging canopy of dense foliage.

Haring called on the Governor, we drore to the Hotel Macassar, where, with the assistance of the captain of a Norwegian ship, dinner got itself ordered. After taking this precaution te drove out into the country, or rather the suburbs, to look at a large col-
 lection ol native arms, from this and the surrounding islands. We were specially interested in the narrow lyak shields and the wider ones
which come from further north, as well as in the masks, skulls, and war-cloaks from Bali, Lombook, and Sumbawa, the musical instruments and weapons peculiar to Celebes, and the spears and lireises from all parts. So badly arranged were
 they, however, and kept in such a dark outhouse, that it was impossille to appreciate their value properly. After inviting the owner-a superintendent of police-and his family to visit the yacht, we continued our drive among pretty villas and bungalows, surrounded by the usual tropical fence, with gorgeons flowers and fruits inside it, until we came to a wealthy Chinaman's house and garden. The house was full of quaint conceits, and in the garden was a very pretty artificial pond surrounded by splendid ferns and palms, looking something like a natural lake in the midst of a tropic jungle. Then we drove on, through more valleys and past more gardens, to the Govermment coal-stores, which Tom inspected with interest, and which, he was told, contained at that moment 5,000 tons of coal. Afterwards, some of the party went on board the Intch gunloat 'Bromo,' which acts as guard-ship, and is now coaling alongside.

The Netherlands Company's steamship the 'Bajara' sails to-morrow at 4 A.m., and the mail closes at six o'clock to-night; so it was necessary to hurry back on board in order to get our letters and jonruals ready in time, though we had luckily fore-
seen this emergency. The dimer was rery goorl, and was served in a nice coot airy room at the lotet, landtaly, waiters, and all being extremety civit, though we coutd scarcely exchange a single word with any of them.

Welmestuy, 1 pril zoth.-Went ashore at 7.30 with Tom, Matefte, Bahy and Mr. Pritchett. The latter goes home to-lay in the 'Bajara.' The morning wats lairly cool. Mathetle amd I went to one or two shops and tried to matie some purchases; hut, between our ignorance of the tanguage and nur poserty in the current coins of the comotry, we did not meet with much success. White we were at one shop, a rery smatt tady drove up in a neatly turned-ont victoria and pair. She was dressed exactly fike all the natives, except that the materiats of her constume were better. A sarong, worked in a peculiar native way with wax, wats womm romol her waist, and a snowy white close-fitting linen jacket trimmed with lace and insertion formerl the rest of her costume. Her hair was neatty fastened up with a comb, but her feet were bare, except for prettily embroilered slippers.

After hreakifast most of the party went off on various shotping expeditions, for it will he Muriel's birthday to-morrow, and we are all froriding suitable offerings for the oc. casion. Mabette and Mr. Penberton atso went to the police-olficer's resi-
 dence to try and hargain for some of the arms which we had seen tast night. There were eight or ten weapons which I should dearty like to possess. However, it proved to be hopeless to attempit to drive a bargain, for the coltection could not be broken up,
and I did not care to give the price asked for the lot. The owner presented me, however, with a magnificent Gordonia rubra, which I regarded as a great acquisition, having long searched vainly for this very plant. It is a specially perfect specimen, with beautiful feathery tips. After great trouble Mr. Pemberton also succeeded in buying for me a few spears, lireises, and baskets from Celebes, Sumbawa, and Bali, together with some so-called tortoiseshells (really turtle-shells) of a larger size than any that we had seen hefore. Still more pleasel was I to get ten skins of the exquisite linds-of-paradise which Wrallace so well describes. He considered himself amply repaid for toil and hardship by the discorery of their previously unknown splendour, which one can quite imagine, even in their dried and imperfectly prepared state. I hare seen them alive at Singapore in an aviary, and they are indeed gorgeous.

Meanwhile Tom and I had returned to the yacht, where we were endeavouring to hasten such necessary preparations as coating, watering, and provisioning. I rainly tried to get a little rest, notwithstanding a stream of visitors, including the Governor, Commandant, and many others. We all lunched ashore, and found most of the officers messing at the hotel, but at a separate talle.

After further trouble in money-changing we went on board the yacht again, to find that the plentiful washing of decks, so necessary after coaling, was in full force, as well as the general air of confusion always prevailing before setting off on a long royage. There being no chance of a start at present, Mr. Pemberton kindly went off to try to get back a cheque which Tom had given for the tortoiseshells and binds-ofparadise already paid for by me on shore. Pratt reported that he had the greatest difficulty in getting lis stores off intact; for as fast as he had bouglit a thing and paid for it, the object or objects-as in the case of trenty-four chickenssuddenly disappeared into the recesses of the market again,
and had to be hunted up with great difticolty and many excuses and subterfuges on the part of the sellers. The poor man with the cheque soon came on board, looking very frightened, and bringing a peace-olfering of large green lemons and a bunch of the hnest gatemias I hat ever seen, the hlossoms being eighteen inches round.

Just before darli we got under way. After our long passage under stemn everybory pulled at the ropes-Tom, children, and all-as if they had never seen sails set before; the men working witl a will, and shouting thein loulest and merriest songs. All sounded most eheery; but the wind wats masteady, and the result was that the sails, which hat been sent up with the fervent hope that they misht remain set for the next six weelis, had to he lowered almuptly in as many minutes, and the anchor hastily dropped, to aroid a d utch hris moored close to us, into which we were rapidly driting in consequence of a suctden shift in the wind. The poor bris having already been in collision, and having lost her lomsprit and forctopmast, it would indeed have been hard to danage her agan, thounh 1 expect we should have got the worst of it, for she was of a good old-fashioned bluff build. It was ammoving to fail in getting under way under sail, and still more so to have to wait two hours while steam was being got up. At 8.jo p.a. we started again, more successfully this time, and proceeded quietly through the night.
'Thurshlay, April 2 sst. -Mariel's birthday. Ceased stemming at 6 A.x. A heary roll throughont the day, with occasional strong syualls. All suffering more or less from the motion. At noon we had stemmed sixty-three miles and sailed twenty-one. In the alteruoon the weather inmpored. At 7 p.m. the ship was put hefore the wind in order to let Neptune come on bourd, alter which the ceremons of crossing the line was carried out with due solemnity and with great success. The costumes were capital, the procession well
managed, and the speeches amusing. Muriel was delighted with an offering of shells, and Neptune finally took his departure amid a shower of one rocket (we could not afford more for fear of accident) and a royal salute of eight rifles. We could watch the flames of the tar-harrel in which Neptune was supposed to have embarked, as it rose and fell

Fishing Boat-Allas Starat.
on the crests of the waves for many miles astern, looking like a small plantom ship.

Frilay, April 22ml.-Bad night; heavy squalls throughout the day. Made and rounded the Paternoster at 8 A.n. Much cooler on deck; no apparent difference below.

At noon we lad come 174 miles under sail, and were in lat. $7^{\circ} 5^{\circ} \mathrm{S}$., long. I i $6^{\circ} 56^{\prime} \mathrm{E}$. In the afternoun we made the entrance to the Allas Strait.

The Strait of Allas is one of several navigable chamels ly which ships can pass firom the confiner waters of the Eastern Archipelago into the lndian Occan. It divides the island of Sombana, famons for possessing the most active roleano in the world, from the island of Lombok. At the eastern end of Lombok, a magnificent peak rises to a height of 12,000 feet, and orershadows the narrow chamel leneath with its imposing mass. The effects of scenery were enhanced loy a sharf) squall, which drove $n$ s into the strait at a thrilling speed, under half-lowered cancas. When the sipuall cleared away the peak of Lombok stood forth clear of cloud, in all its majesty and grandeur, backed by the glorious colours of the evening sky. Doring the hour of twilight a massive cloud rested motionless in the sky immediately abore the peak. Beneath this lofty and imposing canopy, and seen more dimly in the fading light, this solitary momatain presented by turns every feature that is sul, lime and beantiful in landscape.

Suturlay, ifurl 23 rol.-To-day proved lovely after the rain, but there was rery little wind. At noon we had come 66 miles under steam, and 62 miles under sail. I have felt wretchedly ill for the last few days, and seem to have lost both sleep and appetite. The motion, I have no donnt, has something to do with my indisposition, for we are going close-hanled to a wind from one quarter, and there is a heary swell on the other, so that we roll and tomble alout a great deal without making much progress. Every scrap of the Macassar ice has melterl in these three days, instead of lasting three weeks, as did the ice from singapore. This is a terrible blow, though we are consoled hy the thought that the weather will he getting cooler every day now, and that we shall therefore want it less. Unless exceptionally fortunate in making a quick passage, I fear, however, that we shall run short of provisions lefore reaching our first Anstralian port, Macassar having proved a miserable place at which to take in stores.

At 4.30
r.m. we found owselves suddenly, without any warning, in a curionsly disturbed stretch of sea. It was like a tidal wave, or a race off a headland, except that there was no tide and no cape, and we were many miles from land. I immediately thought of Wallace and the rolcanic waves which he alludes to, especially when I olserved that the water was covered with greenish yellow objects, which at a first hasty glance I took for spawn of some lind. We soon had hockets and nets orer the side, and fisher up some of the floating particles, which proved to be lits of pumice-stone, romnded by the action of the wares, and covered with hurnacles from the size of a pin's head upwards. So thickly were they encrusted that it was almost impossible to recognise the original suristance at all. The barnacles, with their long cirri projecting and retracting quickly in search of food, gave the whole mass an appearance of life and motion very curious when closely observed in a
hasin. There wrere sea-anemones among them, and one little lit of stick, of which a long hack snake or worm had scoopect out the interior and thus made itself a home. Sariloowa, said to be one of the most active rolcanoes, is not far distant from the spot where we picked up, the pumice-stone.

It is a lorely, clear, starlight night, wilh no black clouds to threaten coming syualls of wind or rain. The breeze, though not so fair as we could wish, is at any rate cool and refreshing, and the reduced temperature is felt as a great relief to all on hoard. Eren the poor capenter, who has been ill for some time past, is begimning to look better, though his aes are still very painful. I am sory for him, poor man, and for ourselres too, for his services are wanted at every turn just now. We are making all ready for the lad weather, which we may fairly expect to meet with when once in mid-ocean. All the lig boats have been got in-bourd to-lay, chairs have been stowed helow, the top of the deck-house cleared of homber and live-stock, cracked lanes of glass replaced, hattening-down boards looken ont, new ropes rove, and all preparations made for real hard sea work. How I wish we were going down the east coast of Anstralia, inside the larrier-reef, instead of down the stormy west coast! I dread this royage somehow, and legin even to dislike sailing. Perhaps my depression is partly caused ly that stuphid hoy Buzzo haring allowed my favourite Jark, which I had hrousht from Hyderabard, to escape to-day. He sang much more sweetly and softly than most larks, and was a dear little liird, almost as tame as my pet bullfinch. Now he mast meet with a watery grave, for he was tro far from land when he flew off to reach it.

Smaldy, itwil 24 th. - Weather still calm, fine, and hot, but no wind. Our little stock of coal is ruming very low, for we have been olliged to get up steam again. At in. 30 we had the Litany, at which I was able to be present, on leck. At noon we had steamed 127 miles, and were in lat. $11^{\circ} 25^{\prime}$

S., long. $1 \mathrm{I} 6^{\circ} 39^{\prime} \mathrm{E}$. Tom is getting much better again, but is rather anxious at not haring picked up the Trates so soon as he had expected. He now much regrets not having taken more coal and provisions on board, as he fears that the royage maty be unduly profonged. We hat guite a serious consultation to-day with the head-steward on the subject of ways and means, for the strictest economy must be practised as to food and water, and the most must be made of our coal. Oh for another twentr-five tons in reserve!

You may imagine what the heat has been during the last few weels, when, with the themometer standing at $80^{\circ}$ to-day,
people found it so chilly that they conld not eren wait nutil to-morrow ho get ont their warm clothes !

Mondr!!, Ipril 25 th. - Fince and hot, with, alas! no wind. Ceased steaming for a briof space, bot, as wo matle no progress, resumed alter twenty minutes' patuse. At nom we harl come only eight miles mater sail and 158 moler steam, and were in lat. I $3^{\circ} 58^{\prime} \mathrm{S} .$, and lons. I $4^{\circ} 52^{\prime} \mathrm{H}$. The afternom was showery, and hopes were entertancd of a change of wind. A little breeze - a very little one-came out of the squalls, and we ceased stemming about six o'clock.

Thosiluy, April 26th. - A Jreeze sprang up in the comese of the night, and we ceased steaming at 8 A.m. lin the shade, and in a dranght, the thermometer stome at $77^{\circ}$. Everybody was-or at least many were-crying ont lor bhankets and wamer clothing. The Jneeze increaserl athost to a frale, and We were close-hauled, with a heary swell, which matle us all very incomfortable.

Wralursle!!, Apil 27th.-At 4 A.3. Went on deck with Tonn. Weather much finer and wind fairel. We monst hope that yesterday's curious little moon may have changed our luck. All day it continned finer, and in the alternom the wind freshened, and shifter a point or two for the boter, semting ns along at higher speed and right on ome comes ; what we must not inmmble, though the motion was still most mulleasant.

Thurstay, Apil 28 th.-I have been sutfering mulah fiom neuralgia, and last night could not sleep at all, so that although this was leally a lovely day I was mable to enjoy its pleasant beanty. At noon we had cone ifímiles umler nail, and were in lat. I $8^{\circ} 36^{\prime} \mathrm{S}$., long. $109^{\circ} 26^{\prime} \mathrm{E}$. There was no variation in the compass to-day, this being one of the spots in the world where a similar state of things is observolle.

At $5 \cdot 30$ p.m. we hat the thind nambial entertaimment of the present royage, which was quite as varied and successful as usual. Mr'. Pemberton's recitation fiom Temenson, and 'l'al's
limmorons account of Father Neptme's visit to the 'Sunbeam,' were the novelties on this occasion. There were also some excellent songs by the crew, a pretty ballad ly Muriel, and a reading by Tom; Mabelle being as usual the backbone and leader of the whole affair. I managed to sit through it, though in great pain, but was obliged to go to bed directly after.

Frithy, April 29th.- The weather is now really lovely. Painting and raunishing are still the order of the day. At noon we had sailed 143 miles, and were in lat. $20^{\circ} 40^{\prime} \mathrm{S}$., long. $107^{\circ} 5 z^{\prime}$ E. Again there was practically no variation in the compass, and if we only go far enough we shall soon have an extra day in one of our weeks!

Suturduy, Apil 3oth.-After a very bad night, during which I suffered agonies from nemalgia, I woke feeling somewhat hetter. We are now bowling adong before a brisk trade-wind, which produces a certain anount of motion, though the ressel is failly stearly on the whole. At noon we had sailed 162 miles, and were in lat. $22^{\circ} 32^{\prime}$ S., long. $105^{\circ} 53^{\prime}$ E. The wind freshened in the afternoon as usual, but died away slightly during the night, which was beautifully clear and stardit. Ererghorly is full of spirits, amd I hear cheery roices on deck with the least little bit of enry, I fear, as I lie in my bed below.

Sumlay, Mray ist.-- The merry month of May does not commence very auspiciously, with a dirty grey sky, a still dirtier grey sea flopping up on on weather bow, and half a gale blowing. Fortmately it is from the right direction, and we make good progress.

I was able to attend the Litany at 11.30 , and evening service at 4. At noon we had sailed 153 miles, and were in lat. $24^{\circ} 39^{\prime} \mathrm{S} .$, long. $104^{\circ} 14^{\prime}$ E., and were fairly out of the tropics. In fact, everybody is now grumbing at the cold, and all the animals and birds look miserable, although the thernometer still stands at $69^{\circ}$ in the shade. Perhaps the fresh
breeze makes
us so chilly, hough it does not affect the thermometer.

Momlay, May $2 m$.
-The weather is finer, though it stilt keeps sifually; but the wind is bafHing, and we were sailing a good deal out of our course during the night. At noon we were in lat. $26^{\circ}+4^{\prime}$ S., long. $103^{\circ}$ $50^{\prime}$ E. I managed to
go to the deck-house to-
day for lunch, and remained on deck a tittte afterwards.

Tr」rruat Situnsaila
Just before sunset we saw
several sea-lirds, and a splendid atbatross with a magnificent spread of wing. It was wondertul to watch its quick turns and graceful skimming flight, so swift, and yet with hardty any ferceptible movement.

Tuesdry, May 3rd.-A fine day, very smooth, almost calm. Carried away the strop of the mizen-topsait-sheet block and rove new sheets. At noon we had sailed 140 miles, and were in lat. $2 S^{\circ} 54^{\prime}$ S., long. $103^{\circ} 12^{\prime} \mathrm{E}$.

At 2.30 a large fish was olserved close to the ressel. He was from twenty to thirty feet long, and must have been either
a white whale or a shark swimming on his back, and so snowy white as to make the sea, which was of a beautiful clear ultramarine hlue, look pale green alove him, like water over a coral reef. The creature did not rise ahove the surface, so we had not a good riew of him, and he gave no sign of a disposition to 'blow,' though we watched him for more than half an hour. This makes me think that he must have been a shark, and not a whale, as the others assumed.

At 4 P.m. the fires were lighted in order to emable us to get within the influence of the true west wind, for we had reached the edge of the trades. Aloout 6 p.a. we commenced steaming.

Werluesilu!, Muay $4^{t h}$. - A line day, with a moderate sea and a little imaginary breeze. At noon we had come eightysix miles under steam and forty under sail, and were in lat. $30^{\circ} 24^{\prime} \mathrm{S}$., long. $124^{\circ} 26^{\prime} \mathrm{E}$. The temperature at noon in the shade was $65^{\circ}$, which we found very coll.

At 4 r.ar. We saw a steamer hull down. In about an hour we had approached each other sufficiently close to enable us to ascertain that she was the 'Liguria,' one of the Orient Line, bound for Adelaide. We exchanged a little conversation with signal flags, ant, having mutually wished each other a pleasaut voyage, parted company. This was the first ship seen since learing Macassar. The eveming hitterly cold.

We have just seen a splendid lunar rainbow, and I suspect it foreboles a good deal more wind than we have lately had. It was perfect in slape, and the brilliant prismatic colours were most distinctly markerl. I nerer saw such a rainbow, except as the precursor of a circular storm. I only hope that, should we encounter such a gale now, we may get in to the right corner of it, and that it will be travelling in the right direction. I wish it would come in time to run up our weelily arerage to a thousand miles liy mid-day.

Thurschay, May 5 th. - At 5 A.Mr. I was awakened by being nearly washed out of bed on one side and by a deluge of water
coming into the cabin on the other. A sumall hath struck us, and we were tearing along with the lee rail moder water, the rain meanwhile pouring down in torents. The squall som passed over, but there was every apparance of the wind in-

creasing, though the barometer still stood high. Siquall followed squall in quick succession, the wind increasing in force, and the sea rapidly rising. It soon lecame phan that we were in for a gale of some kind, and a very little later it lectune
equally erident that, in accordance with the law of storms, we must he in the north-west quadrant of a circular storm, the centre of the disturbance being somerwere to the southeast. Sails were furled, others were reefed, and all was made fairly snug.

At noon we had ron 136 miles to the north-east since the early morning, but we had not quite reached our estimated weekly average of a thousand miles. At noon we were in lat. $31^{\circ} 29^{\prime}$ S., long. $105^{\circ} 48^{\prime}$ E., with Cape Entrecasteanx 546 miles distant. The barometer stood at $30^{\circ} 10$, and the temperature fell to $60^{\circ}$.

Several times during the morning the lee cutter had been in imminent danger of being lifted right out of the davits and carried away. About two o'clock the topmasts were struck; an hour later the skiylights were covered over with tarpaulin, and a good deal of lattening down took place on deck. Below, the stewards were employed in tautening up things which had heen allowed to get rather slack during the long spell of smooth weather which we have had of late, nothing like a storm haring leen encountered for weeks, or indeed months.

Before dusk the lee cutter was got in-board, more reefs were taken in, all was made smug on deck, and I might say stuffy leelow. Shortly after this was accomplished we sailed out of the influence of the storm, the centre travelling quickly away to the south-east of us. Therempon we shook out one or tro reefs and set a mizen trysail to prevent the fine weather lops coming on loard; for the sea was beginning to go faster than the wind, and one or two big beads of spray found their way on deck, one of which, much to their amusement, drenched the chikdren completely. The glass continued to rise, and the weather improved throughont the night.

Fridu!, ITa!! Gth.-I was indeed delighted when, at dawn,

it was thought safe to let us have a little light and air down below. Soon the sun rose, and all became bright and beantiful once more, though the air felt extremely chilly. We were now well on our course, but sailing pretty close to the wind, and therefore only doing about five or six knots. Continual squalls struck us throughout the day, and the sea was very lump from the effects of yesterday's gale, though the wind had almost completely subsided. What there was of it gradually headed us in the course of the afternoon, which did not tend to make things more comfortable; though the children at any rate did not seem to mind it, for they have entirely got over their slight sea-sickness. At noon we had sailed I 38 miles, and were in lat. $32^{\circ} 28^{\prime} \mathrm{N}$., long. $\cos ^{\circ} 6^{\prime}$ E.; the barometer stood at 30.10 , and the temperature was still $60^{\circ}$.

Sumluy, May Sth.-Woke early, only to hear that the wind had changed; but it proved a lovely morning, though the sky was covered with fleeting clonds, which made it difficult for the navigators to get the sun. We had the Litany at 1 I. 30 , and at noon were in lat. $34^{\circ} 47^{\prime}$ S., long. $113^{\circ} 54^{\prime}$ E., having run zor miles. The temperature had risen to $63^{\circ}$, and the barometer stood at $30 \cdot 19$.

Tom has been deeply immersed in calculations all this afternoon, the hest of the three chronometers on loard, by Dent, having behaved in a very erratic manner since we got into a cooler temperature. On the other hand, the chronometer of Brockbank \& Atkins, which has hitherto been regarded as not quite so reliable, is making up for past shortcomings by a spell of good conduct. Under these circumstances, it is difficult to know which to depend upon, and Tom is conserpuently somewhat anxions about his landfall. The weather has been so squally and overcast that no really good sights hare been obtained all day.

At noon we had only come 194 miles by dead-reckoning. Olservation proved that we had been helped onwards by a
favouring current, and had really come zoi miles. We had evening service at 4.30 r.m. During the afternoon we saw many more sea-birds, and several albatrosses. It was a fine evening, the wind having dropped rather light. In the middle watch, however, it became squally.

CHAPTER X.

## WESTERN AUSTRALIA.

Monday, May gth.-At 3 A.m. carried array the clem of the mainsail, and at 7 a.n. set more sail. At io a.n. we made TVest Cape Horre, Western Anstralia, our first land since learing the Allas Strait. It was with great joy and relief, as well as with, I think, pardonalle pride in Tom's skill as a navigator, that I went on deck to see these rock-bound shores. It was certainly a good landfall, especially considering the
difficulties mhich we had met with on account of the chronometers. The instrument which for years lias been considered the most trustrorthy suddenly changed its rate, and has been losing three seconds in the trenty-four hours. The narigators have been taking great pains. Observations have been frequent. Fifteen sights were talien daily, in three sets of five at three different periods.

Tom's estimated average run ol r,000 knots per week under sail has come out pretty well, and my own daily estimates of the rum have been also surprisingly near the mark. In fact, Tom thinks them rather monderful, considering that they have been arrived at simply by watching and thinking of the ressel's way's all day and part of the night, and often without asking any questions.

At in A.s. we lowered the mainsail and raised the fumel. At noon we had rum 190 miles, and were half a mile to the northward of Eclipse Island, the barometer standing at $30 \cdot 19$, and the thermometer at $59^{\circ}$. At one o'clock we passerl inside Tancourer's Ledge. The coast seemed fine and bold, the granite rocks looking like snow on the summit of the cliffs, at the foot of which the fleecy rollers were breaking in a fringe of pale green sea, whilst on the other side the water remained of a magnificent deep ultramarine colour.

Alout two o'clock we rounded Bald Head, soon after which the harboumaster of King George Sound and a pilot came on board, and were the first to welcome us to Western Australia. Orer the lowland on one side we could see a P. \& O. steamer, with the Blue Peter flying. Accordingly we sealed up all our mails and hurried them off, having previously hoisted the signal to ask if they could be received. By four o'clock we were at anchor in King George Sound, which reminded us much of Pictou in Nora Scotia.

Albany is a clean-looking little town, scarcely more than a village, built on the shore of the bay, and containing some

2,000 inhabitants. We were soon in the gis, on the way to the P. © O. steamer 'Shamon' to see owr old friend Captain Murray. After looking round the familiar decks, and having tea on loard, we exclanged good wishes for a fail royage, and rowed ashore, landing on a long woolen pier.

Carriages are not to be hired in Albany, but we found an obliging carter, who had come to fetch hay from the whard, and who consented to carry me, instead of a bundle of hay, up to the honse of Mr. Loftie, the Govemment Resident. Tre have decided to remain a week in order to give me a chance of recruiting; besides which the 'Sumberm' needs a little painting and touching-up to make her look smart again after all the hard work and buffetings she has gone through.

Most of the party stayed on shore to dimer, for the kitchenrange on loard the 'Smbeam' has got rather damaged by the knocking about of the last lew days. I went back, however, in my primitive conveyance as firr as the end of the pier, and then returned strainht on board, leeling very tired with even so short an experition. In the course of the afternoon a large sackful of letter's and newspapers from England was delivered on board, much to our delight.

Tucsluy, May 1oth.-A hosy morning with letters and telegrams. Dogs are not allowed to land in any part of Australia until they have performed six months' quarantine, but I was able to take mine ashore at Quarantine Islancl, which we found without much difficulty with the aid of a chart. A little before one o'clock we landed at the pier, where Mr. Loftie met us, and drove us to the Residency to lunch. It was a great treat to taste fresh bread and loutter and cream once more, especially to me, for these are among the lew things I am able to eat. After luncle several ladies and gentlemen came to call on us.

I was sorry to liear that a terrible epidemic of typhoid fever seems to be ravaging this little town. Built as it is on
the side of a hill overlooking the sea, and with a deliciously invigorating air always blowing, Albany ought to be the most perfect samatorimm in the world. Later in the afternoon I went for a drive with Mrs. Loftie all round the place, seeing the church, schools, and new town hall, as well as the best and worst parts of the town. It was no longer a mystery why the place should be unhealthy, for the water-supply seems very bad, although the hills above abound with pure springs. The drainage from stables, farm-buildings, poultry-yards, and various detached houses apparently has been so arranged as to fall into the wells which supply each house. The effect of this fatal mistake can easily le imagined, and it is sad to hear of the valuable young lives that have been cut off in their prime by this terrible illness.

In the course of our drive we passed near an encampment of aborigines, but did not see any of the people themselves. We also passed several large heaps of whales' bones, collected, in the days when whales were numerous here, by a German, with the intention of burning or grinding them into manure. Formerly this part of the coast used to be a good ground for whalers, and there were always five or six vessels in or out of the harbour all the year round. But the crews, with their usual shortsightedness, not content with killing their prey in the ordinary manner, took to blowing them up with dynamite ; the result heing that they killed more than they could deal with, and frightened the remainder away.

The steward's report on the resources of the place from a marketing point of riew is more curious than encouraging. There is no fresh butter nor milk to be had, except through the kindness of a few private individuals. Mutton abounds, but there is very little beef or veal. Good York hams are to be procured from England only. Fruit and regetables are brought down from Perth or come over from Adelaide, and the most eatable salt butter is brought from Melbourne.

Wedncsiday, May the
it th. --It had been settled that to-day should be deroted to an excursion to the forests which are now being opened up by the new line of railway in course of construction. The special train of ballast-trucks which had been provided for us was to have started at ten o'clock, soon after which hour we landed, some delay haring been caused at the last moment ly the receipt of a message requesting us to send ashore every rug we possessed, in order to make the truck in which we were to travel as comfortable as possille. The required wraps and furs had accordingly to be got up from the hold, where they had lain for months past. On landing we found a pleasant party assembled to receive us, including the engineer of the new line, Mr. Sterrart, and his wife. In due course we were all seated on tro long planks, back to brack, in open trucks, behind an engine and tender. We commenced our journey by slomly passing the enclosures, gardens, and courts adjoining the houses of the town. About threequarters of a mile out of Allany we stopped to water the engine at a primitive trough in a cutting about twelve feet deep-the deepest on

Kingéia
the whole line, which in the main is laid over a surface as flat as a pancake.

The morning was simply perfect - one of those days which make mere existence a pleasure ; the air felt light and invigorating, the sun was bright and warm ; all seemed so different from the damp muggy air or fierce burning sunsline of which we hare had so much experience lately.

Our route lay over a sort of moorland, sprinkled with rare ericas such as we carefully preserve in greenhouses at home. Other flowers there were, too, in abuudance, and of many kinds, including scarlet bottle-brushes, large white epacris, and minnosa corered with yellow balls of blossom. The trees seemed to consist chiefly of white gum, peppermint, and banksias, and all looked rather ragged and mitidy. One great feature of the vegetation was what are called the 'black-loys' (Xuntlorrheat), somewhat resembling tree-ferns, with a huge black pineapple stem, at the top of which grows a bushy tuft of grass-like foliage.

About nine miles out we came to a broad stretch of water known by the very prosaic name of 'Nine-mile Lake.' It looked lovely this bright morning, with the opposite hills and a fine group of blue gum-trees sharply mirrored in its glassy surface. The train stopped for a few minutes to enable us to admire the riew and to take some photographs. In the course of another mile or so we quitted the main line to Perth, and proceeded along a branch line leading into the heart of the forest. The undergrowth was nowhere very thick, and where it had been cleared by burning, fine grass had sprung up in its place. As we left the moorland and got into the real forest of grand gum-trees the scene became most striking. The massive stems of many of the eucalypti were between thirty and forty feet in circumference and orer a hundred feet in height. The glimpses which we caught between these tall trees of Torbay, with the waves breaking in huge rollers on
the shore or in angry surf against the steep cliffs of Eclipse Island, were quite fascinating.

We steamed slowly along the lightly ballasted line-only laid yesterday, and over which $n o$ engine has yet travelled -two men rumning on in front to tap the rails and joints. and to see that all was safe. About three-quarters of a mile of rail is taid each day. It is being boilt on what is called the land-grant system ; that is to say, for erery mile completed the Govermment sive the railway company 6,ooo square acres of land, to be chosen at the completion of the line by the company's agent, the Goverument reserving to themselves the right of alternate frontage to the railway. The distance from Albany to Beverly (a town standing about 120 miles equidistant firom Perth and Fremantle, which will he the terminus of the line, at any rate lor the present) is 220 miles. The line was commenced and should have been carried on from both ends, but the contractors find it much cheaper to work only from the Albany end. It ought to be a very cheap line, for it requires scarcely any earthworlis and no rock-cuttings or bridges, the soil being loose and gravelly with a granite foundation. There are few rivers to cross; and timber for the sleepers is to be had in abundance, and of the best quality, from the trees which must necessarily lee cut down to clear the forest for the passage of the line. The entire road was to have been completed in three Jears from the time of commencement; but it will probably be fimishect in about two, as a good deal of the work is atready done.

We were taken by another branch line to some saw-mills, where the sleepers for the railway are prepared. Here some of us got into a light American buggy drawn by a fine strong pair of cart-horses, in which conreyance we took our first drive through the bush. To me it seemed rather rongh work, for in many places there was no track at all, while in others the road was obstructed by 'black-boys' and by innumerable
tree-stumps, which the horses avoided or stepped over most cleverly. Still the wheels could not be expected to show quite so much intelligence, and we consequently suffered frequent and riolent jolts. From the driver-a pleasant, well-informed man - I learnt a good deal respecting the men employed on the line. There are about I 30 hands, living up here in the forest, engaged in hewing down, sawing, and transporting trees. These, with the women and children accompanying them, form a population of 200 souls suddenly established in the depths of a virgin forest. They have a school, and a schoolmaster who charges two shillings a week per head for schooling, and has fourteen pupils. He was dressed like a gentleman, but earns less than the labourers, who get ten shillings a day, or $3 l$. a week, the best hands being paid regularly under all conditions of weather, and only the inferior labourers receiving their wages for the time during which they are actually at work. There are four fine teams of Australian-bred horses, and a spare pair for road or bush work. Communi-

[^1]cation with Albany, the base of operations, is of comse maintained ly means of the line, sone of the navies eren coming from and retuming thither each day in the trucks. The married men who live in the forest have nice little threeroomed cottages, and those 1 went into were neatly papred and furnished, and looked delightfully clean and tidy. The single men generally live in a sort of tont with permanent walls of brick or mood, and mess at a boarding-honse for eighteen shillings a meek. This seems a sood deal for a labourer to pay for food alone, lout it realy means the grood meals a day. The little colony has a butcher attached to it, from whom meat of the finest puality may be purehasent at sixpence per pound, all but the prime parts being thrown away.

The rest of the party having walked up the fine, I waited for them at the honse of the District Mandore, who with his wife received me most hospitably. On the walls of the apartment I was interested to notice the portraits of some of those who had heen connecter with my father-in-law in business, and who are now in the employ of Messis. Mifter, the contractors for this line.

As soon as Mrr. Stewart and the rest of the party had joined us, we proceered to the sarw-mills ant watcled some great logs of jarrah being eat into sleepers. There were no elephants to assist in the operation as in Bummah, so that all the work had to be done by steam, with a little help from mon and lorses. Quantities of fragrant rose-colomed sawdust, used for stable litter, were lying abont. Tons of wool not large enough for steepers were being bumed in order to get rid of it. It seemed a teribly wasteful proceeting, but there was more material than was wanted, and space after all was the great thims needed.

From the saw-mills we penetrated further into the forest, in order to see more large trees ent down, hown into logs, and
dragged away. Some of the giants of the forest were really magnificent. We followed a double team of sixteen horses drawing a timber-cart composed of one long thick pole between two enormons wheels some seren or eight feet in diameter. Above these wheels a rery strong iron arch is fastened, prorided with heary chains, by means of which and with the aid of an iron crowhar, used as a lever, amost any weight of timber can he raised from the ground. The apparatus is called a 'jinka.' The men engaged in the work sit apon the pole with the greatest sangfroid as it goes bumping and (rashing through the forest, striking np against big trees, or knocking down small ones; sometimes one wheel and sometimes another high on the top of a stump, or sometimes looth wheels firmly fixed in one of the numerous deep holes. The scene was altogether most picturesque, as well as interesting; and it must be remembered that the top of each strmp was larger than the surface of a large dining-table. The trees were from eighty to one hundred feet in height, all their branches springing from near the summit, so that the shadows cast were quite different from those one is accustomed to see in an ordinary wood. The day was brilliant, the swn shining brighatly, and the blue sky rolieved hy a few white Heecy clonds moving softly before a gentle air. The timber-cutters were of fine physigue, with brawny limbs and sumburnt faces.

We watched the adrentures of one enormous log. A team of fourteen horses were yoked to a strong chain attached by large hooks to a trunk of such vast proportions that it seemed as if all the king's horses and all the king's men could never make it stir an inch. Twice the effort was made, and trice it failed. First, the hooks slipped off the end, and as the horses were pulling and tugging with all their might, directly the weight was removed away they went helter-skelter down the steep hill, up which they had just climbed with so much difficulty, being atterly mable to stop themselves on the steep slippery
ground. Next time the chain broke as the horses were straining every muscle, and the same tantalising process was repeated with even more striking effect. The whole of the long tean of the fifteen horses for they had adiled another this time) became hopelessly entangled, two of the joor animals either falling or getting hampered and knocked down in their headlong gallop. The third time the log was got into josition ; the 'jinka,' with only one horse attached to it, was bonght close, the pole was lowered, and the levers applied with such force that they not only raised the log but very nearly the unfortunate horse also into the air. When all was satisfactorily arranged, the other lomses were attached to the jinka, and away they all went merrily down the hill, but only to come into collision with a bigy tree. The horses had again to be taken out, and harnessed this time to the other end of the jinka, so as to pull it in the opposite direction. At last the big $\log$ reached the sam-mills in safety, alont the same time as we got there ourselves. The visited the village shop, which appeared to be well supplied with useful stores, and also the lutcher's and carpenter's shops, and the smithy. They have never seen a chergyman or doctor up here, lout by railway there is easy communication with the town if necessary. In the course of our ramlles we heard the dishearteming intelligence that, owing to some misunderstanding, our train harl already gone back to Allany, taking with it not only our luncheon, but all the maps. We proceeded, however, to the trysting-place, only to be greeted by blank looks of disappointment as each new arriral received the mpleasant news that the report of the tram's erratic proceeding was only too well founded. Everylooly was tired, cold, and hungry, and the conversation naturally languisherl. At last Mr. Sterrart, who had been down the line to recomnoitre, bronght back the welcome news that the distant snort of the engine could be heard. In due course it arrived, and the baskets and boxes containing the
much－desired food were transferred from the truck to the bank and quickly unpacked ly willing liands．Never，I am sure，was a luncheon more thoroughly appreciated than this in the depths of an Australian forest．The wraps，too，were most acceptable， for the air became leen directly after the early sumset．When we star＇ted on our return journey，taking back two truck－loads of workmen with us，it really seemed bitterly cold．Care had also to be taken to shelter ourselyes from the shower ol sparks from the wood fire of the engine，which flew and streamed out behind us like the tail of a rocket．We went back much more quickly than we had come，and stopped nowhere，except to take in a fresh supply of trood and water and to drop some of our passengers at their wayside residences．

Tab started off on horseback early this morning for Kendenup，a large station about forty miles inland，where we are to join him to－morrow，having been invited to stay for a day or two and judge for ourselves what station life is like． We accordingly sent all our luggage ashore to－night，in readi－ ness for an early start in the morning．

Thurshlay，May 12th．－Half－past nine was the hour ap－ pointed for our departure，and soon afterwards we were all assembled on the pier，where we were met by a little group of friends who had come to see us off．Mr．Roach，the landlord of the＇White Hart，＇was to drive us in a comfortable－looking light four－wheeled waggonette with a top to it，drawn by a pair of Govermment horses．The latter are generally used for carrying the mails or for the police service，but the Governor had telegraphed orders that they were to be lent to us for this expedition，as we could not have made it without them．Mabelle，Mr．des Graz，and Mr．Pemberton packed in behind，whilst I climbed up in front next the driver．There was a little difficulty at first in starting，but once that was orercome it was indeed a case of＇off．＇We galloped four miles without stopping or upsetting，the one fact being perhaps
quite as wonderful as the other. Up hill, down dale, romed corners, over stmmp, along rough rouds, throngh heary sand - on we went as hard as our horses could gallop. Fortwately there is not moch tratfic on the rant, and during this mad career we only met two men walking and passed one cart.

About seren miles from Allany we had to climb a long steep incline, called spearwod Hill, from the top of which we had a fine view oxer Almany, Fing George Somad, and the lighthonse on Lreaksea lslam. There were a great many Howers and a few trees quite manown to us in the bush. Some of the Jlossoms were extremely pretty, lut it was hopeless to think of stopling to gather thom, for our horses were warranted not to start again under hialf an hom at least. They went at a good pace, howerar, passing another cart, and one colonist on horseback, very much encmubered with parcels, but not sufficiently so to perent him from politely making room for us.

Chorkerup Lake Inn, our first change, fifteen miles from Albany, was reached in rather less than ninety minutes. It is a long, low, onestoreyed wooden building, lout everything was scrapulously cleall. In a few minutes the table was corered with a spotless cloth, on which fowls, home-cured bacon, mutton, home-made beenl, potted butter, condensed milk, tea, Bass's beer, and sumdry other articles of foom and drink were temptingly displayed. We could not help regretting the absence of fresh milk and loutter; and it does seem wonderful that where land is of comparatively little value, and where grass springs up in profusion the moncent that land is cleared, people should not keep a cow or two, especially when the family comprises numerous small children, and there is a constant though scanty stream of passing travellers to provide for, whose number will be increased when the railway passes within a couple of miles of the imn.

Just as we were starting I discovered that the old smith living close by had been engaged on one of my father-inlaw's contracts in South Wales, and had worked for four years in the Tictoria Docks in London. He was delighted to exchange greetings with us; and it was quite touching to hear his protestations that he ' did not want nothing at all, only just to shake hands,' which he did over and over again, assmring me of his conviction that our risit was 'certain to do a power of good to the colony.' I suppose he gave us credit for having inherited, or at all events profited by, some of my dear father-in-law's good qualities.

The next stage was a long and weary one of another fifteen miles, mostly throngh heary sand. Luckily, we had rather a good pair of big black horses this time, which took us along well. It was a fine warm afternoon, like a September day in England ; but the drive was uneventinl, and even monotonous except for the numberless jolts. We only met one cart and passed two houses, one ol which was unimhabited and falling into decay. We also passed a large iguana, a hage kind of lizard about two feet long, lying sunning limsell' on the road. The aborigines eat these creatures, and say they are very good; and I have heard that white people have also tried them successfully. Their eggs are delicions, and when roasted in hot embers taste just like laked custard. They lay from twenty to thirty in the large ant-heaps which one constantly meets with in the Jash, and which when rifled, in January or February, sield a rich harvest of these eggs. A shrul, very much like dogwool, with a lilac flower rather like a large thistle, but with the leaves turned back, was plentiful, and is a valualle product, horses being able to live upon it for many weels without water, though it does not look especially succulent. We saw beautiful parrots of all colours flying across the road, besides magnies and 'break-of-day 'birds, a species of magpie. Our driver was very obliging in pointing
out everything of interest, including the Pongerup and Stirling Ranges in the blue distance.

At the end of the thirty-one miles we came to one of the adranced railway rillages inhalited by the pioncers of civilisation. It was very like the one we visited yestertay; in lact, I suppose they are afl similar, experience having taught that a certain style of arrangement is the most convenient.

A couple of miles further brought us-in two hours forty

A Lreakblunt in tie Eush
minutes from Chorkerup-in sight of a tidy little house and homestead standing in the midst of a small ctearing, surrounded by haystacks and sheds, and really looking like a bit of the old country.
light glad we all were to get out and stretch our weary limbs atter the shaking and jolting of the last sixteen miles; and still more welcome was a cup of good tea with real cream, home-made brearl, and fresh butter, offered with the greatest hospitality and kindness, in a nice old-fashioned dining-room.

Ererything was exquisitely clean, and nicely served. The sit-ting-room contained sereral books, and the bedrooms all looked comfortable. The outsilie of the house and the verandah were covered with woodhines, fuchsias, and Maréchal Niel roses, whilst the garden was full of pink and white oxalis and other florers. I ought, in sheer gratitude, to add that the mistress of this pretty hostelry absolutely refused all payment, and indeed sent out her two nice daughters to gather some roses and other flowers for a nosegay lor me.

If it had been difficult to reach this imm from the high road, it seemed ever so much more difficult to get away from it by quite another route. It was like leaving the palace of the Sleeping Beauty, so dense was the lorest and so impossible to find the ancient track, already quite overgrown. A little perseverance, however, hrought us once more to the main road, along which we bowled and jolted at a merry pace for about ten miles. We met four wagons, drawn by four horses each, and laden with sandal-woor, guided, or rather left to themselves, by a Chinaman. It was with great difficulty that we succeeded in passing the first three wagons, and in getting out of our way the fourth collided with a tree, which, I thought, must bring it to a standstill ; but no: after prodigions exertion on the part of the lorses, and a great straining of harness and knocking about of roodwork, it crashed slowly on, hreaking the treewhich was a tolerably thick one-completely in two, and carrying part of it array.

At the end of the ten miles we again turned off the main road at a point where a solitary pillar-post and parcel-bos stood lyy the wayside, and once more plonged into the intricacies of a ly-track. Lucly it was that we had saved the daylight, for some of the holes were deep enough to have apset any trap, and there was a steep hill, which our driver seemed to riew with great apprehension, though I do not fancy we should think much of it in East Sussex. Soon

after this we came to a large homestead and farm, near which a number of sheep were folded. On the opposite bank stood a sulbstantial-looking wooden honse, surrounded ly a verandah and hy a clump of trees, in the middle of what might have been an English park, to judge from the grass and the fine timber; and after crossing a small creek we reached the hospitable door of Kendenup Station.

It had turned bitterly cold after leaving Mount Barker, and I realised the ralue of the warning which our Alloany friends had given as to the treacherous character of the Australian climate at this time of year. In fact I lelt thoronghly chilled, and quite too miserably ill to do justice to any of the many lindnesses prepared, except that of a blazing wood fire.

Tall seemed to have spent a pleasant morning riding through the bash after kangaroos, of which plenty had been seen, but none killed. The very beanty of the day interfered with the sport, for the air was so still and clear that the hangaroos heard and saw the hunters long letore they could set within shot. After smprer the gentlemen went out to lomet opossums ly moonlight, and shot tro, literally ' up a s.rumtree. Opossum-honting does not seem great sport, for the poor little animals sit like eats on the branch of a tree, with their long tails hanging down, and are easily sped hey a dog or a native.

Irvilay, Ma!y I 3 th. - It was a very cold night, the therinometer falling to freezing-point. Woke at six, to find a bight, clear, cold morming, with a sharp wind blowing fiom the south, which is of course the coldest quarter in this part of the world. At seven a delicious cup of tea was brought up, and at eight we breakfasted, the table being charmingly decorated with fresh flowers and fruit. Alterwards a stroll round the house, gardens, and orchard, and a gossip over the fire, occupied the early part of the morning very agreeably.

The difficulty of housekeeping here must be extreme. It
is almost impossible to keep servants in the far-away bush; they all like to be near a town. I would earnestly advise everybody thinking of going to any out-of-the-way part of our colonies to learn to a certain extent how to do everything for himself or herself. Cooking, baking, and washing, besides making and mending, are duties which a woman may very likely have to modertake herself, or to teach an untrained servant to perform. I should be inclined to add to the list of desirable accomplistments riding, driving, and the art of shoeing and suddling a horse in case of emergency; for the distances from place to place are great, and the men are often all out on the run or in the bush.

About half-past mine Mr. Hassall took me for a drive round the station and clearing. We saw the remains of the old gold-workings, not two hundred yards from the house. Up to now they have been unprofitable, but hopes are entertained that, with better machinery for crushing the quartz, larger results may be obtained. At present the expense of working is so great that the gold is not found in paying quantities.

From the deserted gold-field we drove through some enclosed land where corn and 'straw-hay' had been grown, but had been given up because it did not pay. Then through more enclosures for cattle and sheep, and finally over some virgin land, across what might have been an English park if it had not looked so untidy from many of the trees liaving been 'rung' -an ugly but economical method of felling timber, by cutting a deep furrow round the bark so as to stop the circulation, and thns cause the tree to die. Then we crossed a now dried-up river, and climbed the opposite bank of a creek, to a point from which we had a lovely view of the distant Stirling Range.

I was interested to hear that, with the aid of a foreman from Suffolk, the system of rotation of crops had been tried here with great success, as far as production went. Never
were such wheat and 'straw-hay' crops seen in the colony ; but, atter all, the farm did not pay, for flour from South Australia could be purchased cheaper; and as teams are constantly going into Albany with loads of sandal-wood and wool, the carriage out costs very little.

I was told that the land here only carries one sheep, to ten acres. On these extensive sheep-walks good dogs are much wanted; but they are very rare, for the tendency of the present breed is to drive and harry the sheep too much. They hare one good dog on the run here, who knows every patch of poison-plant between Kendenup and the grazing-ground, and barks round it, keeping the sheep off it, till the whole flock has safely passed. This poison-plant-of which there are several kinds, some more deadly than others-is the bane of the colony. They say that sheep horn in the colony know it, and impart their knowledge to their lambs, but that all imported sheep eat it readily and die at once.

The homestead is a nice, large, comfortable place with plenty of room for man and beast, including any stray bachelors and other wayfarers, who claim hospitality almost as a right in these isolated localities. Adjoining the homestead is a well-stocked store, at which everything can lue bought, from lollypops to suits of clothing, and from which the shepherds oldain most of their supplies. There are also enclosures for wild horses, which are numerous, and are occasionally hunted and captured. Last night two were brought into the station. Of course every accommodation is provided for the care and treatment of sheep in the varions stages of their existence, including the means of washing and shearing them. An orchard and fruit-garden close liy yield tons of fruit every year for the merest scratching of the soil. To obtain labour is the difficulty. The lirds, especially parrots, are terrible enemies to the frut-crops. In the early morning one may see a tree laden with splendid fruit just ready to be gathered, and in an
hour later the whole may be on the ground--not eaten, but simply thrown down, brused and spoitt, by the birds. Although the thermometer fell to freezing-point last night, we had pomegranates at dessert which had been grown and ripened in the open air. Oranges and lemons grow well, and rines flourish, wine-making laring been already tried with fair success in Western Australia.

Arrangements had heen made for a kangaroo-hunt tomorrow. I should dearly like to see one; but it is impossible to remain for it, as not only is Tom expecting us to return, but I feel much too weak and ill to think of riding. It was therefore settled that Mabelle, Tal, and Mr. Pemberton should stay, and Mr. des Graz and I return to Albany. A black hoy was despatched on horseback to Mount Barker with sundry telegrams to make arrangements for staying at Albany orer next Monday night, when it is proposed to give a ball in our honomr. Posts are so few and far between in Western Australia, and indeed in many other parts of the continent, that telegrams generally take the place of letters. The cost of a message is sery moderate within the limits of each colony, but terribly dear when once those limits are passed.

At twelve o'clock the waggonette came to the door, and I resumed my place in front, well wrapped up, for it was raining hard. We lelt the buggy to bring on the others to-morrow, and startel on our way, full of regret at having to leave so soon, and of gratitude for the kindness and hospitality we had received.

Just before leaving, we lad an opportunity of seeing a native lad throw a boomerang-or kylie, as they are called here. I could not have believed that a piece of wood could have looked and behaved so exactly like a bird, quivering, turning, flying, hovering, and swooping, with many changes of pace and direction, and finally alighting close to the thrower's feet.

The horses were tired, and on promess was therefore somewhat slow as far as Mont Barker, where Mrs. Comerthe hostess-again received us cordially, quickly lighted a fire, and made me comfortalle in front of it. Then she prodnced a regular comertr lunch, enting with a grape tart, plenty of thick cream, and splendid apples and pears. I gave her some books in remembrance of our little risit; and she finally sent me away rested and refreshed, with a present of fiesh batter and flowers.

It was nearly dark by the time
we left Chorkerup-indeed, scarcely light enough to distinguish the kind landlarly's white apron as she ran out to greet us. Such a warm welcome as she gare us! and such a

Boomerang 3 , or Eylees
bush flowers, and she put up some bunches of ' everlastings,' for which this part of the world is famous, and which are said to keep fresh for years.

I settled down as best I could in the back of the waggonette before the horses were put in, so as to be quite ready for the actual start, which was a work of time and difficulty ; for the horses at first absolutely refused to move forward, though they kept alternately rearing, kicking, phonging, and standing stubbornly still. At the end of half an hom's efforts our coachman, who had been exhorted to stick tight in expectation of a flying start, gave up the attempt, and the horses were remored. After some discussion the least tired of the past pair and the least wicked of the present were put in, and off we went, with a jerk and a jolt, and many imjunctions to stick to the road. This was easier said than done; for when we came to the camp-fires of the lumberers whom I had seen at work yesterday, the glare frightened our horses, and cansed them to swerve off the road, and dash into the bush by the side. This happened more than once; but even on the road itself the jerks and jolts were so bad that we were forced to go slowly, so that we only reached Albany at half-past eight instead of at six o'clock, and found everybody very anxious abont us. Tom and Baby waited on the pier until past seven, when cold and hunger drove them back to the yacht.

Saturday, May I4th.-When I awoke this morning the fever and ague from which I had been suffering had all disappeared, and, though still very tired, I felt decidedly better for the change and the bush life. I am convinced there is nothing like a land journey to restore a sea-sick person after a voyage. The news which greeted me on arriving last night had not been cheering, for several of our men were ill with feverish colds.

CHAPTER XI.
ALBANY TO ADELAIDE.

Suturduy, Muy I4th.-It was a cold showery morning when we landed, to photograph a party of natives, and see them throw boomerangs and spears. They were the most miserable-looking oljects I ever beheld; rather like Fuegians. The group consisted of two men, dressed partly in tattered European clothes, and partly in dirty, greasy kangaroo-skins heaped one on the top of another, and two women in equally disreputable costumes. One of the latter had a piccanimny hung behind her in an opossum-skin, the little hairy liead
and lright shining eyes of the child peeping out from its shelter in the quaintest mamer. Although the poor creatures were all so ughy, we did our best to take some photographs of them, using a pile of sandal-wood hags as a background. Then we drove up to the cricket-ground to see them throw their boomerangs or kylies, which they did very cleverly. One of the kylies was broken against a tree, but most of the others flew with unerring precision. The spears were thrown from a flat oval piece of wood, in size and shape something like the loade of a paddle, which sent them forward with great accuracy and relocity. The natives have formed a small encampment not far lrom here, where they live in the most primitire fashion, rery dirty, and quite harmless. Their nearest neighbour tells me that they come daily to her house for water and scraps, but that they nerer attempt to steal anything or cause her any annoyance.

We next visited two curio shops, kepit by Welbl and Gardiner. Welb is rather a clever naturalist, and corresponds with Dr. Hooker ; he sent a good many lotanical specimens from this neighbourhood to the Colonial Exhibition last year. There were some beautiful feathers of the male and female cockatoo, a few stuffed birds, and a good many weapons, some of which we bought. At Gardiner's we found more native weapons, which he buys in the bush and then sets the natives to work to repair. Fortunately for us, he had only recently returned from one of his expeditions, and we were therefore able to pick up some of the specimens in the condition in which he had found them, all rough and broken from the effects of recent fights. The spear-heads and teeth are generally made of flint or granite, or old bottle-glass, fastened to the shaft with langaroo sinews and the gum of the "back boy." The tomahawks have double edges fastened on in the same manner. The knives are like one-sided spear-heads, with a short handle attached. The flat paddle-shaped pieces of wood by means of
which they throw their spears are called womaras. There were also numerons specimens of kylies, and curions messagesticks about ten or twelve inches long, made from the thighbone of the kangaroo, and sharply pointed at one end. A sort of hieroglyp or rude writing is seratched unon them, and they are used to convey messages from one place to another. We bought some opossum-skins and rugs of varions sorts, and admired the beautiful live birds, inchuding parrots and cockatoos.

From three to five o'clock I was 'at lome' on board the 'Sunbeam.' The afternoon had improved, and was bright and smony. I think our guests were pleased with their risit.

Tab, Mabelle, and Mr. Pemberton returned this afternoon. They seemed to have had a most enjoyable though fatiguing day, haring breakfasted at seren o'clock, and started before eight. They saw some trenty or thirty kangaroos, of which they only killed three. At half-past one they set out for Albany, and drove the forty-two miles, through Mount Barker and Chorkerup. Mabelle brought me back some bush flowers, very beatiful and interesting when closely examined, especially the bhe holly, a plant with a holly-like leaf and a blue pea-shaped flower. Two or three rarieties of hue erica, tiny heaths, and epacris were also very pretty. It is curious how all, even the smallest of the bush flowers, run to bottlebrush just as readily as the great banksias and encalypti, and what strange little lootle-brushy appendages they all have.

Nabelle also brought some beautiful black cockatoos' feathers. Those of the male bird have a band of brilliant scarlet right across them, which looks so artiticial that when a fan made of these feathers was sent lately to New Zealand nobody would beliere that it had not been cleverly painted. The female bird has a light yellow and fawn-coloured tail, more delicate in colour though not so brilliant as her mate's plumage. We saw a great flight of black cockatoos yesterday.

These seemed to hare white in their tails instead of red. Cockatoos are very affectionate and loyal to one another-a fact of which those who kill or capture them take adrantage; for if they succeed in wounding a lird they tie it up in a tree,

Au Aboriginal
where, so long as it continues to cry, not one of its companions will leave it, but will hover around, allowing themselves to be shot rather than desert a comrade. It is a great pity these handsome birds derour the grain so terribly that sctulers are
obliged to wage a war of extermination aganst them. Very different is the hehavionr moler similar ciremstanes of the kangaroo, in whom I have in consequence lost much of my interest. When hard pressed the doe will take her offepring out of her poncla and fling it to the dogss to gain time for her own escape. The meat of the joeys, as the young ones are called, is ly far the best, and tastes something like have, though it is rather tough and stringy. The flesh of the ohler animals is more like that of red deer. Both require to be well hasted, and eaten with red cmant jelly, to make them at all palatable.

Sumbiy, Diny I 5 th. Such a lovely day-more like an ideal May morning in England than an Anstralian winter's day. We attended service in a picturesique iry-covered editice.

After lunch a great many workpenple and others cane on board, by invitation, to see the yacht, as it was impossible for them to risit it on any other chay. The blue waters of the Sound looked quite gay with the little flotilla of boats coming and going.

At three o'clock we all went ashore in the steam-lannch, most of the party intemting to climb up the hill to the signal-station to look at the riew. My own destination was Quarantine Island, where I sat on the samels in the delicions sunshine, white the dogs ran about and the children gathered flowers. It seems a nice, heallhy, hreezy little place, with a well-plamed lazaretto, capable of acommodating a small number of invalids, and a conrenient coltage for the custorian and his wife, whom we could ace ont in their boat fishing. While we were on shore, the men in our boat, with the assistance of two boathooks, hat eren then with considerable difficalty, captured an octopers about three feet across ; a horrid-looking monster, which tried to cling to urergthing near with its round suckers and long feelers.

Monday, May I 6 th. - Tom took me ashore to cmable me
to keep a driving engagement; but he was suffering from a chill, and felt very unwell. Although anxions to try the efficacy of his universal panacea-exercise-he was ultimately obliged to abandon the experiment and to return on board.

I enjoyed my drive immensely, for it was a bright sumy morning, with a solt air blowing. The buggy was comfortable; the horses went well ; and Mr. Young, who drove me, was full of interesting information. Alter passing the cemeteries, we went by a rough road through the bush, where much of the regetation was new and strange. Then we crossed the extreme end of a large fresh-water lake, and shortly afterwards emerged from the bush on to the shore of a fime bay, called Middleton Beach, along the edge of which, by the side of the curling breakers, we drove over a firm white sand, admiring the effect of the dark bhe sea, changing to a delicate pale green before brealing on the shore. On the way back I was shown a small corrugated-iron house, with an outbuilding attached, in the middle of a considerable clearing, the owner of which proposes to supply the town of Albany with garden and dairy produce. I wish him every success, and hope that he will include eggs and poultry in his scheme; for the only egros which we have been able to procure have been six in number, and have cost threepence each. These, too, were only supplied as a special farour, because I was 'sick.'

Tom dragged himself on shore again in the afternoon, but did not remain long, as we had to receive more visitors, who had been preveuted from coming yesterday.

At seven o'clock Mr. and Mrs. Loftie and Mr. Young came to dimer, and Tom being too ill to appear, I had to do my best to entertain them. After clinner, haring seen the invalids made as comfortable as possible, we started, well wrapped up-for it was bitterly cold-for the dance at the Court-House, which is built on so steep a hill that, although the building
is three storeys high towards the sea, yet ly entering at the Track the level of the top stores is at once reathen. The dancing had just begun, and it proved a most cheery little hall. All present were hearty, kindly, and genial.

Tuestay, ALny Izth.-A lovely moming, perfectly calm. Tom much better, and anxious to be off. Mails and farewell

The Furt Watch
messages were accordingly sent on shore, and Mr. Loftie came off with parting words of kindness and farewell, and laden with flowers. Precisely at eleren o'clock, with signals of 'Good-liye' and 'Thanks' hoisted at the main, we steamed out of the snug harbour where we have passed such a pleasant week and have receired so much kindness. The pilot soon
quitted us, and we were once more on the broad ocean. The wind outside was dead alread, and the heary rollers tumbling in foreboded a still lreavier swell as we got further away from the land. In fact, Tom more than once asked me if we had not better put back. As it was too rough to steam, a certain amoment ol snug sail was set ; and, close-hanted, we steered as near our course as circumstances would permit.

There are a good many invalids on board among the crew and servants, the symptoms in each case being very similar. This morning the two maids, two stewards, and three of the men had more or less sucemmbed to 'malarial colds '—nothing serions, the doctor says, lout rery uncomfortahle. It is quite certain that many more are now laid up than we ever had on the sick-list in the tropics; but the sudden change from heat to cold may of course account lor this state of things.

Ifechesslay, May isth. - The wind was rather more fareurable; but, although close-hanled, we were nearly two and a lalf peints off our course, the head-sea rmming very high. Although the air was warm I remained in my cabin all the morning, feeling wretcher and uncomfortable. At noon we had run 110 miles- 100 under steam and 10 mader sailand were in lat. $35^{\circ} 44^{\prime}$ S., long. $119^{\circ} 53^{\prime}$ E., Kangaroo Island being 820 miles distant. The total distance now accomplished since we left England is 9,236 miles tunder sail, and 7,982 under steam, making a total of 17,218 miles.

I was called upon deck once during the day to see a whale with a fin on its lack. Gray, in lis book on Western Austratia, says that this kind of whale lives princijally on the large phosphorescent medusse. The ovening was cold, as usnal, and I was glad to go helow early. Tenus rose brilhimtly, but so red that several on board thought it must he the port light of a ship astern; though how any ressel could hare suddenly got there they could not male out. Soon after-

Wards shonts were heard on first secing what Tom described as lamps of light or tireballs astern. 'Ihese tmaned ont to be the luminons meduse which Gray speaks of, and which were much larger and more brilliant than any we had yet seen.

Thurstay, Ma! igth.—Wind fair, but head-swell still contimuing. I had a very busy morning below, writing journal and letters. At noon we had run 120 miles moder sail, and were then in lat. $36^{3}$ I $2^{\prime} \mathrm{S} ., \operatorname{long} .2_{2} 2^{\circ} 4^{\prime} \mathrm{E}$. In the afternoon we took some photograplas of Tom in his R.N.A.V. mitorm, the Guard of Honomr, onrselyes, the Court, de., on the occasion of Neptune's visit when we crossed the line. Sundry monscessfin attempts were made to photograph the anmals, lout they seemed to be suffering from a serere attack of the fidgets. To see 'Jemny Jenkins,' the monkey, in her new blue jumper with 'Sunbean R.Y.S., emboidered by Mabelle, and 'Mr. Short,' the black-and-tan terfier, playing together, is really yery pretty; they are so quick and agile in their morements that it is almost impossible to cateh them. 'Mrs. Sharp, the white toy terrier, in her new jersey, a romfertion of Muriel's, oceasionally joins in the frolic; though her condescension is not much appreciated, for she is rather too quick with her teeth. The photograph of the Guard of Honour was spoiled ly a passing whate, to which Tom suddenly drew ererybody's attention bos pointing to it withe his drawn sword. The monster left a greass wake behind him, as he swam lazily along, blowing shoghty.

Towards evening the air becane rery cold, and the wind not quite so fair. A splendid sunset threw a lovely glow on the sails. Later on the sea continued to go down, and I was able to make my first appearance at dinner at sea for many a long day past, but only as a spectator even now.

Friduty, May 2oth.-Another fine clear day ; but the horrid easterly swell is as Joad as ever, and with such a light wind we seem to feel it more. A busy moming with jommal and letters.

At noon we had come $\mathbf{I} 48$ miles unter sail, and Kangaroo Island was now 546 miles distant ; we were in lat. $36^{\circ} 25^{\prime} \mathrm{S}$., long. $125^{\circ} 13^{\prime}$ E.

Suturday, May 2Ist.-A pouring wet morning, with every appearance of continned rain. Later on the weather cleared, though heary squalls came up at intervals until noon, when it turned quite warm, bright, and sumy.

In the afternoon the wind freshened considerally, and our speed improved in proportion. The heary head-swell having gone down, ereryone on board felt more comfortahle. Adrantage was taken of the lull to get a few photographs of the engineers, cooks, and others. A nautical entertaimment had been fixed for 6 r.s.; lout unfortunately that hour was selected to gylle the ship, so that it was 6.30 before

Funaing down. Eastive

the entertamment commenced. There was hat a small audience; which seemed a pity, for the performance was exceptionally good.

The wind continued to freshen, and loy i i p.an. we were tearing through the water before a fair breeze, but lmocking about a good deal more than was pleasant.

S'undry, May 22mb.-From midnight until 6 ans. the state of things was wretched in the extreme. Sails flapping, the cry of the sailors continually heard above the howling of the wind, and much water on deck. Then I went to sleep, waking again at seven to find it blowing half a gale of wind, which rapidly increased to a whole gale. At noon we were in lat.
$35^{\circ} 55^{\prime}$ S., long. $132^{\circ} 7^{\prime}$ E., having run 206 miles monder sail.

We had service at II.i5, and again at four o'clock. In the morning there was no congregation ; partly because of the rough weather, and partly hecause we had sailed so well that nobody realised how much faster the time was to-lay than it had heen yesterday, and we were therelore all behindhand. In the afternoon I went on deck for a short time, but found it so cold that I could not remain; for, although the wind was right alt, the gale blew fierce and strong. Tom had a very anxious time of it, literally flying along a strange coast, with on one hand the danger of being driven ashore if the weather should become at all thick, and on the other the risk of getting pooped by the powerful following sea il sail were shortened. At II p.n. we met a large sailing-ship steering to the southward; which was felt to be very satisfactory, showing as it did that we were on the right track.

Momlay, May 23rl.-Precisely at 7 A.m. we made the lights of Cape Borda or Flinders, on Kangaroo Island, about twelve miles ahead, exactly where Tom expected to find it, which was a great relief to everybody on board, after our two days of discomfort and anxiety. At noon we had run 265 miles, and should have done much more had we not been obliged to shorten saril in the night.

In the atternoon the yacht passed between Kangaroo and Althorpe Islands, the coast of the lormer being very like the white clilfs between Dover and Folkestone. It was extremely cold, and after my night of neuralgic pains I did not dare to go out on deck, and lad to content myself with olserving everything through the windows of the deck-house. In the evening we made Troubridge and all the other lights on the way up to Glenelg, and alter some deliberation Tom decided to heave-to for the night, instead of sailing on to the anchorage of Port Adelaide.

Thustuy, May $24^{\text {th. - By }} 6$ a.m. we were on deck, endeatouing to ascertain our precise position, and about seven a steam-launch came bustling towards us, whose occupants hailed us with cordial welcomes to South Anstralia. Directly they came alongside, our small deck-house was crowded with risitors, who presented us in the name of the Holdfast Bay Yacht Chub with a beautifully illuminated and kindly worded address. So anxious had they been to give us a tram ami early welcome, that they had been on the look-out for us all night, while we had been waiting outside so as to arrive by daylight. It seems that the signamen on Cape Borda had made out our number yesterday when we were more than seren miles off, so clear is the dry air of these regions. Our early guests were naturally hungry and cold; and a large party soon sat down to a hastily prepared breakfast. It was excellently supplemented, however-to us seafarers especially —by a large basket of splendid finit which our friends had hrought off with them. Presently the Mayor of Glenelg and his daughter arrived, full, like everyorly else, of lindly plans for our amusement while here.

Having come to an anchor off Glenelg, Tons and Tab went up to Adelaide to attend the Birthtay lreée, and I landed later with the rest of the party at the long wooden pier.

The first appearance of Glenelg from the sea is rery like that of Deanville, the town appearing to consist of semi-detached honses standing in the midst of gardens and trees, with a pretty background of hills. There seemed to lee no small houses or streets-an impression which was confimed by closer inspection. In fact, Glenelg is essentially a fashionahle seaside place; and though there are a few excellent shops, most of the supplies must come from Adelaide, seven miles off, to which a steam-tram runs every half-hour, taking twenty minutes for the journey. The carriage-road crosses the tramway and the
railway line to Melbourne at intervals. The country is quite flat, the road passing between fields now beautifully green. We saw the suburb of Goodwood a little way off, and soon afterwards the tall spires of the churches and the towers of the public buildings of Adelaide appeared. To-day being a general holiday in honour of the Queen's birthday, the houses in the city were decked with flags and the shops closed, which gave

it rather a Sunday-like appearance. The streets are fine and wide, especially King William Street. We drove to Government House, a comfortable residence surrounded by a nice English-looking garden.

It was rery pleasant to meet our friend the Governor, Sir William Robinson, again. After lunch we drove off to the races in two open carriages, with an escort of police, passing through a
pretty part of the cily, where chanming little villas nestle in the midst of detached gardens. The racecourse itself is extremely pretty, and commands a fine view. The grand-stand is a fine building, with the Governor's box in the centre. The Cup had just been run for, but we saw a capital hurdle-race, over a course three miles long, with some very stiff flights of rails, about which there was no give-and-take. Then came a good Hat race, three out of five horses coming in neck and neck. We drove back to Gorermment House to tea, and then returned to Glenelg, where we had left the two little ones.

On the pier we found awaiting us an unfortunate reporter, who had been lnuting Tom down all day to try and interview him, but had always managed to arrive everywhere just too late. We took him off with us and gare him some dinner, for which he was very grateful after his hard wearying day. Presently Tom and Mabelle arrived, and directly afterwards a boat came alongside with another reporter. More unfortunate even than the first, he had sat at the semaphore, halfway between here and Port Alelaide, all nighi, and then, not knowing where to go, had oscillated between the two places all day, telegraphing in various directions for information.

Wedncsiday, M:(y) $25^{\text {flh. -At half-past ten o'clock we started }}$ on an excursion into the picturesque mountains which lie behind Glenelg, Mr. Stock driving us in his nice little American buggy, drawn ly a capital pair of horses. The rest of the party followed in a waggonette. Our way at first lay through the suburbs of Glenelg. The houses which we passed had a well-to-do appearance, with scarcely any shops or workmen's dwellings to lee seen. The road soon began to ascend, and ljefore long became steep. As we climbed upwards towards Belair the view became so lovely that it was impossible to resist the temptation of adding to our collection by pausing to photograph the scene. Our first stopping-place was the Blackwood Hotel, where we found a capital luncheon.

The air felt pure and bracing, the sun shone brightly, and the scenery had a thoroughly English character, with pretty hedgerows, and little streams crossed by modern bridges, all of which reminded us pleasantly of the old country. What was less familiar was an unprotected railway crossing which intersected the road close by, and over which a train passed rapidly, and, as it seemed to us, with dangerously insufficient warning.

After driving for some distance along the crest of the hill, we dipped once more into the ralley by another road quite as steep and more tortnous than the last. From this road the riews were even more charming than those which we had previously admired; for beneath us lay a complete panorama of Adelaide and its suburbs, covering part of the rich plain at the foot of the opposite blue hills, and skirted by the north arm of the Port river. The little horses went well, and, although the road was rough and in many places steep, trotted merrily on until we reached the pier at Glenelg. Here we found a group of sixty or seventy visitors to the 'Sunbeam' waiting to be conveyed on board in the steam-launch, which had to perform several journeys to the shore before her task was accomplished.

May 25 th. -About noon we got under way and steamed up towards Port Adelaide, stopping for a time oft the semaphore in order to visit the Japanese corvette 'Ryujo,' and the South Australian gunboat ' Protector.' The coast reminded me of that outside Liverpool, near the mouth of the Mersey; well-built watering-places, piers, and sandy beaches-a very paradise for bathers-completing the resemblance. Largs Bay is a particularly healthy spot, and possesses an hotel which is said to be the best in South Australia. At the semaphore also a compact little township has been established, which boasts a mayor and corporation.

Further on nothing except sand and bushes could be seen ;

Protector；Guaboat
and a little higher we got into a namower thamel，and passed a fer boats and small craft，every one of which hat some sort of flag or bunting flying in our honour．The shouts of warm greeting increased as we approached the lown，till at last it was difficult to turn quickly enough from side to side ant respond to the waring hands and cheers and shouts of cordial welcome to the new combtry．The fier dad whares were densely crowded，and we were scarcely abreast of them before the Mayor（Mr．S．Malin）and Corporation came on board with an address saying how glad they were to see us in their waters．This visit was followel by another from Commorlore Honey，Mr．Justice Bundey，and other gentlemen representing the South Australian Yacht Clul．All this was very pleasant and gratifying；though I must confess that such mexpected kindness produced that familiar feeling known as a lump in my throat．It is always rather touching to liew any one else cheered enthusiastically，and when those nearest and dearest to one are concerned，it is naturally doubly trying．

After a harried inspection of the yacht by our visitors，
and a hasty tea, we were obliged to say 'good-lye' to our newly-made friends, for we had to catch the five-o'clock train, and there was no time to spare. In fact, we nearly missed it, and I am afraid we must have presented an undignified spectacle to the numerous idlers who had turned out to look at us-I in a waggonette heaped with bags and bundles, and the others flying along the street. Passing through the pleasant country, we arrived at the North Terrace station, and reached Government House a few minutes later. In the evening there was a dimer party and a reception, which brought what had been a most agreeable, but for me a very tiring, day to a cluse.

## CHAPTER XII.

## ADELAIDE.

Friluy, May 2jth.-We breakfasted punctually at nine o'clock, and I drove afterwards with the Governor to see it collection of furs which were to be sold loy auction. They were chiefly from Tasmania, and comprised a good many excellent specimens. From the fur-shop, we went to the Exhibition buildings, where we were met he Sir Herbert Sandford (the British Commissioner), Sir Samuel Daremport, Mr. Jessop, and others. The building is light, airy, and well designed; and when filled, as it promises to he, with natural products, manufactured goods, and works of art, will doubtless be well worth a risit. I wish we could return for the
opening, as we have leen most lindly pressed to do ; but mnfortmately our motto always seems to be 'Forward!' and we are due in Melbourne on June gth, and at Mount Gambier on the 16 thi ; so that if we linger for every inducement I fear we shall never get through the programme of our royage.

From the Exhibition the Governor took me for a drive all round the city, past handsome and sulsstantial pulbic buildings and through wide and clean streets. The system of park-lands, or reserves of open spaces between the blocks of buildings, appears to le excellent, both from a picturesque and a samitary point of riew.

We lunched at North Adelaide with Mr. Justice Bundey, and saw the beautiful riew from his house. On arriving, I was given a basket of pink roses grown out of doors, which recalled delightful memories of an English Jme, although in Australia the present month really corresponds to our own Norember.

Tom had to rush off to meet Mr. Bray, and to attend the ammual meeting of the South Australian Geographical Society, where he made a speech. ${ }^{1}$ Among other people present at the meeting, he was introduced to the Australian explorer, Mr. David Lindsay, who returned about six months ago from a journey of thirteen months right across the continent, from Adelaide to a point a little to the soutla-east of Port Darwin. The expedition was most difficult and trying-much more so than it would have been in any ordinary year, on account of the drought. The thermometer sometimes stood at $125^{\circ}$ in the shade, and could not register the heat in the sun! The explorers were obliged to travel by day, in order that they might see and report upon the country. They were once seven days withoud water, and constantly ran very short of it. The jounney was made entirely with camels, and the intelligence of these animals seems to hare been extraordinary. One day the party were, as usnal, very short of water, and Mr. Lindsay's

[^2]favourite camel seemed almost exhasted. Fortunately his rider chanced to notice smoke in the distance, which, he knew, indicated the presence of blacks, and consequently water. Merely turning the camel's head in the right direction, he let the reins fall on its neck, and the creature carried him to the desired spot, although it took five hours to traverse the distance-fourteen miles. After a little drink and a short rest of four hours he was able to proceed sixteen miles further, to a spot where he rested quietly for three or four days, by the side of a stream.

Suturluy, Muy 2 Sth. - We had several risitors in the early morning, among whom was Brigadier-General Owen, who brought plans for the defences of Adelaide for Tom to examine. Mr. Millar also called to make arrangements about our projected trip to Silverton.

At half-past eleven we proceeded ly train to Port Aclelaide, where we were receired by the Mayor (Mr. Malin) and Corporation, and taken to see the new municipal buildings. Afterwards we had lunch in the town-hall; and later on some of the party took a drise round the town and saw the museum, which, though small, is interesting, a large flourmill, and several other louildings. By the 2.50 train we left for Adelaide, and had to dress with unleard-of rapidity in order to be present at the Goremor's reception, which was attended by several hundred people. Fortunately it was a lovely day, and we were able to take adrantage of the mild spring-like temperature to stroll abont the pretty garden and listen to the pleasant strains of the police lands.

Sunduy, May 29th.-'This morning we went to the Anglican cathedral at half-past ten, and heard a most leautiful choral service, including a 'Te Deum' by Gounod. This leeing Whit Sunday, the interior of the church was prettily decorated. Service over, we drove to the residence of the Chief Justice, where zoology and lootany are combined in a small space,

A日elaide
 Mayor of Adelaide's honse. and afterwaths to the town-han, where we received a formal welcome from the Adelaite Town Council. Kind speeches and wam acknowledgments, followed by an organ recital. The instrument superb and admirally played. By 4.45 train to Cockbom to visit the celebrated Broken-Hill Silver Mine at Silverton.

Thurstry!, June zml.—Our special train reached Cocklnurn at eight o'clock this monning. We loreakifasted at the rumingsheds, and were afterwards driven over to Broken-Hill, which we reached at two o'clock, and descenderl the mine both before and after luncheon. We went down what is called M'Culloch's Shalt, at a point where the mine is 216 feet deep, amd were greatly interested in seeing the process of extracting the ore. The latest weekly returns from this mine show a production of 46,000 ounces of silver.

Friduy, June 3rr.-This morning we descended another shaft and inspected a different part of the mine, in which the ores differ greatly from those me saw resterday, and consist chiefly of kaolin. After reaching the surface we risited the assaying offices, and watched the experiments for testing the richness of ores.

The afternoon's drive to Silvertom was rery pleasant. After changing horses, we went on orer plains corered with salt-bushes. The phucky little horses did their work excellently, and lander us at Cockimm at 6.30 p.as. Thence, atter another change of horses, we continued our joumey to Thackaringa, where we rejoined the railway.

Suturday, June $4^{\text {th }}$.- On the return journey from Silverion to Adelaide I stopped during the early hours of this morning at Terowie to see my consin Herbert Woodgate, and thoroughly enjoyed, in spite of sleepiness and fatigue, the sight at his house of so many oljects which brought lack memories of old days. The walls were covered with pictures of Swayslands,
the dear old place in Rent of Herlert's father-where I spent many happy hours of childhood, and where Mr. Burnand used often to come and coach us all in charades and amateur theatricals. There were also many pictures of Penshurst Place, and of the old rillage church, whose leautiful chime of bells I so well remember, and where I have 'assisted' at more than one pretty wedding. It all brought back many mingled memories of joy and sorrow. Nothing conld have been kinder than our welcome. I was quite sorry when we had to turn out again and trundle down to the train and be off once more to Adelaide, where we amiced at hall-past twelve p.m.

We were met at the station and carried off to lunch at Govermment House, and afterwards laad to dress as quickly as possible to go to the meet of the hounds. The day was fine and pleasant, and it was very enjoyable driving down in the Governor's mail-phaeton, and seeing the other vehicles of all sorts and kinds proceeding in the same direction. The drivers of these vehicles were so regardless of all considerations of time, place, and speed, that I began to think hunting on wheels, or even going to a meet on wheels, was far more dangerons than riding across comntry.

I am not sure that I sloould enjoy my time in Anstralia so much if I had not a certain belief in lismet; lor traveling out here is certainly very full ol risk. What with unbroken horses, rickety carts, inexferienced drivers, rotten and ill-made harness put on the wrong way, bad roads, reckless driving, and a general total indifference to the safety of life and limb, a journey is always an exciting, and sometimes a risky, experience. A little excitement is all very well; lut when it becomes absolutely dangerous, a little of it goes a long way. I dislike seeing a horse's hoofs quite close to my head, with a trace or two trailing in the dust, or to hear the ominous crack of splinter-bar or bolt; yet these are things of daily and hourly occurrence in our bush drives. I must say I was
fully contimed in my opinion that driving was more dangerous than riding when the hunt commenced.
A man in scarlet went first with a little bag of anineed, and was followed ly about 150 people on foot, and as many more either on horsedack or in relicles. The drag was so arrangerl that many of the jamps conld be seen from a ridge near. The clever way in which little horses of all sorts and linds, well bred and underbeed, with all sorts of weights on their baeks, jumper high timber fences without touching them, was wonderful to behold. Some of the obstacles were even worse than timber, for they were made of four wires stretched hetween timber posts with a solich rail at top. The last fence of all, atter twenty minutes run through a faily heary country, measmed four feet tro ; and ret not a horse ont of the filty or sisty who jumped it even tonchen it in the least. I noticed that one or two of the riders were very careless of the homds, who lad to cronch onder the fences mutil the horses had jumped orer them. Afterwards I drove with the chidren to 'The Olives,' a pretty house with a lovely garden, full of fragrant riolets, where a large party was assembled to meet us at tea.

Momilty, June 6th.-Tesumed work upon my Ambulance paper at an early hour this moming. Not laving a sectetary to help, me, I find the work really hard; for my am is often so bad that I can hardly use it. I had a very fosy morning,
and after breakfast went to the Zoological Gardens, where we were met by Sir Thomas Elder and others. I was amused to see four little leopard cubs crouched in a row on a plank, looking in their dark corner like owls. From the Zoological Gardens we drove to the Botanical Gardens, and were met there by Dr. Schomburg, the director, who showed us all the plants, and especially pointed out the different species of eucalypti, which I am most anxious to understand, for they are a large 'family.' Everything lere, whether called banksia or anything else, seems to run to bottle-brush just as in Western Australia. Antipodean botany is puzzling to the new arrival. The museum at the Botanical Gardens is excellently arranged, both for the exhibition of specimens and for the information of visitors.

Mrs. Hay sent her carriage for us at one o'clock, and we weut out to lunch at her pretty country place, where we met a large party. We had to hurry back directly afterwards to attend the Ambulance Meeting, at which the Governor kindty presided. It was held at Govermment House, and was well attended. I found it a great effort to read the paper I had prepared. There were few speakers. Everything, however, went off well, and I earnestly hope our afternoon's work may hear good, useful fruit. There was a dimer-party in the evening at Govermment House, foflowed by a small reception and some nice music.

Tursilty, June 7th.-In spite of my Ambulance meeting leing over, the force of habit was so strong upon me that I awoke before four. At half-past ten I went to a small gallery of excellent pictures, over which we were shown by the gentlemen in charge. We afterwards went through the School of Art and saw the frupils at work.

At half-past eleren Mr. D. Lindsay, the Australian explorer, came with his aboriginal servant, Cubadjee, whom he had bronght from some place in the interior. This youth, it seems,
is considered the short member of his fanily; frut, although only seventeen year's old, he is six feet five inctres in height, while his elder brother, they dectare, is seven feet six inches, and the rest of the tamily are equally tadt. Cubadjee made fire for us with two pieces of wood (a process of which 1 had often heard), by rubking a piece of wood with hotes bored in it against another piece, quickly froducing sparks, which easity ignited a piece of paper, and teft a certain amount of htack porvder.

At 12.30 I went with Mr. Riches to the Treasmry to see the nuggets which had been collected by the Local Government to be shown at the Exhibition. Some of them were fine specimens, especially the last great tind at Teetutpa-a solid allurial lmmp of gold. There was atso a splendid piece of gotd quartz, hrought in only yesterday from Mount I'leasant. We next risited the post-office, and were shown all over that establishment by Mr. Todd, the Postmaster-General. There I saw for the first time the working of a large telephone exchange, where at least half a dozen dadies sat with their mouth and ears alternately applied to the instruments, either to speak or to tisten. The telegraph-room was atso interesting. Onty a few years ago the telegraph service cost per week some seren or eight pounds, whereas now the expenditure amomets to twice as many thousands. Mr. Todd had himself been with the experition to establish the great European telegraph line that runs right throngh Sonthern, Central, and Northern Anstralia to Port Darwin. He told ns an amnsing story of the natives' notion of the work they were engaged on: "What lig fool white man is, putting up fence! cat will rmm moderneath.' Mr. Told is a great electrician, as well as a talented meteorologist, and his tables of winds and probatide weather, to be seen in the central haft of the prost-office, most be of great valne to shipowners.

On our way to the station we calted in at the Lower

Or the LIfmay River

Honse, and heard Mr. Playford make his speech on the noconfidence vote. From the Lower we went to the Upper Honse, where another gentleman was adrocating, as strongly as Mr. Playford has been denouncing, the Government loans.

Many friends met us at the station, including the Mayor, the Speaker, the Chief Justice, and several others. Two carriages lad been reserved for us in the Melbourne Express. The railroad climbs up the same hills among which we have taken so many pleasant drives during our stay liere. The views of Mount Lofty and Mount Barker from the carriage mindow were lorely, and I was quite sory when darkness prevented me from seeing any more of the landscape.

We arrived at Murray Bridge soon after six, and were met by Tab and Mr. Reid, and all walked up to a suug hotel. The beds were comfortable, and I managed to keep up a fire of mallee roots all night, for it was bitterly cold.

Wednesday, June Sth.-I awoke at two, and as it proved impossible to go to sleep again, I wrote and read until day-
break. At a tittle before nine we went down to the lank to meet Mrr. Nacfartane and his danghters, who had come forty miles down the Murray in their pretty little steamlaunch to take us to their station lodge, eight mites from Wetlington. They had started before four this morning, Mr. Macfarlane steering all the way. The launch is a Clydebuilt boat, and is rery fist. We passed through pretty scenery on our way up the river, and after a time came to a station to which many acces have heen added ly rechaiming the swamps which tie on eithar side of the river. There chanced to the fwo guns on board the launch, and as we steamed along, the gentlemen amsed themselves by occasional shots at the numerous back swans, coosts, and lucks.

We royaged for some miles between banks fringed with willors, the original cuttings of which had heen hought by an old French settler fiom Napoleon's grave in St. Helena. The trees have grown marreftousty; and I hear that this year the arenue, if it may he so callerl, is to bee extended some miles further up the stream.

At about one oclock we arriver at the kanding-pier, where we found one of the caprocions trading-loats, of which we have met many on the river. It is a regular pedtar's store on a large scate, where one might huy dresses of the tatest fashion, cloaks and bomets, hesides all sorts of medicines for man and beast, groceries, and stores of erex lind. A most useful institution it must be to isolated toilers on the tranks of the Muras.

On reaching Weltington Lodge we were first shown a shearing-house with every convenience for folding the sheep in thousands. After the shearins operations are completed the sheep are let out into littte peris, so that it can be at once seen whether a man has done his work well or itl. Te saw att the processes and modes of fracking the wool, of which Mr. Macfartane is justly proud ; for I leelieve his system has been
adopted in almost all the rool-producing countries of the world. Leaving the wool-sheds, we went to the stables, which were full of young horses; and here we were shown a 'buck-board'-a wonderful Australian conveyance. It is as light as a feather, and is capable of carrying a great deal of luggage or farm produce, besides the driver and one passenger. This particular buckboard almost came to grief yesterday with Mr. Macfarlane, who had gone out shooting with one of his daughters. He had left the carriage to get nearer his game, when the horses took fright and ran away, tearing round and round a field ; a trace broke, and the light trap nearly touched the fence at every turn. The young girl stuck pluckity to her post, and at last succeeded in pulling the horses up.

Through a door in the wall of the stable yard we passed into a beautiful garden full of violets, mignonette, scarlet geraniums, and late autumn flowers ; besides gooselerries, raspberries, currants, and other Enghish fruits; white overhead stretched a long trellis covered with fine Muscatel vines from which some late bunches of grapes were still hanging.

Wellington Lodge itself proved to be a comfortable dwelling, with rooms opening into a garden, bright and gay with

A Buckboard
sunshine and flowers. The view over the phans was full of life, and the paddocks were well stocked with cattle and horses. After an excellent luncheon of good things prodaced upon the station, we spent a pleasant time lowing orer a capital collection of photographs, some of which Mr. Macfarlane very kindly gave us. Then we went into the garden, strolled round the stahles, saw some of the young stock, and were shown what a huck-jumper could do. After a fer pretiminary currets and bounds, the gates of the yard were opened and the animal was allowed to 'go' like an arrow from a bow for three miles. His first leap was over a very stiff gate more than tive feet high, which he took like a bird, and was soon out of sight.

Haring dined, we returned to the raikray, and took up our quarters in a boudoir-car attached to the express train, timed to arive at Ballarat at six oclock to-morrow morning.

Ballorat: Thursda!, Jume gth.-Aiter an excellent night in a haxions sleeping-carriage I was called at seven. A little before eight the Mayor of Ballarat and others were announced, and I had to settle with them the programme for the day whilst the others were making their toilettes. At 8.30 we left the station for Craig's Hotel, where we found breakliast prepared in a comfortable room. Ton and the doctor had aranged to arrive at half-past ten. They had parted from us at Port Adelaide on the 3rd instant, and had gone by sea in the 'Sumbean' to Melbourne, which they reached on the 6th, after a quick but stormy passage. Tom remained a couple of days at Melbourne-just long enough to be present at the opening of the Parliament, and also at the amnual banquet of the Public Service Association, at both of which functions he was glad to lee able to assist. On the gth he embarked again, took the yacht on to Geelong, and came by train to meet us here. TVe were just in time to receive the Mayor at half-past eleven, and then we all went

Ballarat
After looking over the building we drove first to the Albion Lode Nine; but as no preparation had been made for our descent, we went on to the Star of the East Mine, where, after putting on real miners' clothes, we went down in the cage with Mr. Carroll and several other directors who had come to meet us. The directors asked me to christen a new lode the 'Lady Brassey,' but I suggested that the name should be the 'Sunbeam,' and this they erentually adopted. I was afterwards glad to hear that the next day they struck gold. There was a good deal of walking to be done in the mine, and I was very tired when we got to the surlace, at about three o'clock, having been underground more than two hours. But there was still the crushing and separating machinery to be seen. This proved to be much the same as we saw in use in Cornwall last year for dealing with the tin ore.

It was past three before we got back to the hotel, tired and hungry. Much as we were in need of refreshment, we
were not allowed to take it in peace, for interviemer after interviewer kept coming in. At last, in despair, we ordered three hansoms and went for a drive round the town and enrirons, which looked wonderfully beautiful in spite of the wintry season and the gloomy day.

We dined at the tulle drlate. Tom and the doctor arrived later. Tom's eve was very bad, and had to be bandaged up, and altogether he looked very unrell.

Friduy, June rotl.-Miss Cornwall, the discoverer and part owner of the Midas Mine, came early this morning with her father and one or two other gentlemen-directors of the mine-to take us to see it. The drive through the torn was pleasant, and we admired its fine public buildings and leantiful arenues of trees. It was a long drive to the mine through Dowling Forest, a picturescue spot with large trees growing amid park-like scenery ; marrel, however, ly dibris of abandoned mines, or little red flags and heaps of mblbish, which marked the camps of new explorers. Miss Comwall made the way interesting ly telling us the history of the rarious mines we passed. One story was about a mine known to be very rich, but which had never paid more than its rorking expenses. The reason for this unsatisfactory condition of affairs could not be discorered for a long time; but at last one man 'peached,' and was followed by the police to a public-house, where he met four of his fellow-diggers. Afthough they had all been carefully searched before learing the mine, a more rigorous examination ly the police produced fifteen ounces of gold on each man, the gold being valued at 4 l. per ounce.

Arrived at the mine, we donned our mining costumes and climbed to the top of a high mound, where the crushing apparatus stood. The contents of one of the huge cylinders had been kept especially for us to see, and the miners now proceeded to run it out, with the result that a good proportion of small nuggets was oltained. This was by no means the

## Missing Page

by Mr. Bartlett (one of the numerous sons of the Mr. Bartlett who was so long with Mr. Brassey in France, Spain, and other parts of the world), and soon found ourselves on board the yacht again, which looked, as usual, pleasant and homelike atter our short absence.

Saturthy, June inth.-I was up early, and tried to rouse the other people up too, so as to be ready to receive the Mayor and Corporation, who arrived punctually, accompanied by their ladies. The presentation of the address of welcome took some time, and then we had to go ashore and drive round the town of Geelong to admire its public buildings and natural beanties. Tom went first, with the principal members of the Corporation, in a break drawn by four horses, and I followed with the children in other carriages. We drove first to the skating-rink, through nice broad streets with good houses on each side. There we were shown an excellent collection of New Guinea curiosities belonging to a German explorer. From the skating-rink we drove through fine streets to the Botanical Gardens, where we were given beautiful nosegays, and there met the rest of the party, who were being taken round by the curator. The gardens, and especially the houses, seem admirally plamed. I noticed an ingenions arrangement of water-pipes leading to the top of the tree-ferns, by which the parasites growing on them are kept constantly moist.

When we had thoroughly explored the gardens we bade adieu to the Mayor and our friends on shore, and went off to the yacht. We reached Hobson's Bay at dusk, and arrived at Government House in the middle of dimner !

## CHAPTER XIII.

## VICTORIA.

Sumluy, June 12th.-The Gorermment House of the colony of Tictoria is an enormous building, surrounded by an extensive park, situated on the top of a small hill, which commands a fine rierr over Melbourne and its suburs. There is a complete suite of private apartments in the house, besides romns for many gnests, and splendid reception, lanqueting, and ball rooms.

Momlay, Jume I 3 the - My cold is still lad ; and although Tom is also far lrom well, he went to the torn-latl this norning to receive a deputation from the Victorian Branch of the Imperial Federation League. The morning was a busy one
until it became time to go down to the yacht to lunch and to receive the officers of the naral forces and Naral Brigade. Miss Cornwall and her father came later, bringing the nugget with them which had been found on Friday not more than two feet from the place where I was scratching. It is to loe named after me. It is looked upon as the forerumer of other and larger ones. Miss Romilly also arrived, and we all returned to Melbourne in the evening.

Tucsduy, June I4th.-After a bad night I had to receive many interviewers. Amongst those who called was a gentleman from the Woman's Suffrage Society, who wished to elicit some expression of my opinion, as he understood that I was strongly in farour of woman's suffrage. He seemed disappointed when I told him he was mistaken, and that I thought women already did govern the world more or less, whereas if we had rotes we should probably not have nearly as much power as we now possess without any undue fuss being made about it.

Mabelle went down with Miss Romilly to see her off to England by the 'Bengal.' Tom took the children for' a walk, lut it was still too wet for me to renture out, except in a close carriage. In the afternoon I went with the Governor to the fine public library, where we were met by Sir George Terdon and some other gentlemen. It is a splendid building, and the arrangements are most excellent. A student can get any book he requires, on almost every subject, without the least trouble. From the library we drove to the picturegallery, which contains a small but excellent collection, partly selected and sent out by Sir Frederick Leighton. Then we went to the museum, where we found many New Guinea and Fijian curiosities. Ugly oljects are here arranged so as to look pretty, and I gathered many hints for the future arrangement of my orn musem at home.

Tom and Mabelle had not intended starting for Mount Gambier until to-morrow, but they found to-day that it was
absolately necessary to leare by the 4.5 train il they wished to arrive in time for the opening of the nuw railway from Nomet Gambier to Nararcoorte.
 writing, receiving interviewers, and trying on my fincy dress for the Jubilee Ball. Lunch was early in conserpence of Sir Henry and Lady Loch having to lay the fommation-stone of the Generiere Ward of the hospital. I did not so to the ceremony, although I discorered afterward that I had been expected. The ladies of the committee sent me a lovely bountuet which they had intended to present, ornamented with a little stutted bird hearinc a tiny model of the 'Smbeam' on its back. I had a hard atternoon's work until tea-time, when my friend Mrs. Faildax, the Admiral's wife, arrived with Miss Dundas.

Thursday, Jint 1 60h.-Sir Hemry Loch, Mrs. Fairtax, and Miss Dundas went to the Mint this morning to see the first of the new sovereigns struck, Jut I was not able to accompany them. Ererrone seems to amree that the likeness of her Majesty which is to appear upon the coins is not at all good. The weatler was showery all day, and bitterly cold in the altermoon when we went to assist at the stone-laying of the Wesleyan College, where many speeches were made, Sir I Iemy

Vrotorid Defence Fleet

Loch's being a really brilhiant oration. There was again an early dimuer to-night, to allow of our all going afterwards to the Bijou Theatre to see Madame Majeroni in 'Wanda.'

Suturlty, June 18 th.-Tom, Tals, and NLabelle returned to-day from Mount Gambier. I must use Tom's description of the expedition.

- We made another excursion from Melbourne on June 4 th, to attend the opening of the railway connecting the district of Mount Gambier, in South Australia, with the direct line from Adelaide to Melbourne. We trarelled to Wolseley by the ordinary train, the journey occupring from 4 p.m, on June I4 until an early hour on the following morning. There we waited several hours for the special train from Adelaide ; and Mount Gambier was not reached mutil a late hour in the evening.
'Mount Gambier is a pleasing town of 5,000 inhabitants, in the centre of a district of rich volcanic soil, thrown up over a sandstone formation by the eruptions of a former period, when the surrounding mountains were active volcanoes. The two principal craters are now filled with lakes of great depth, appropriately named, from their beautiful colouring, the Blue Lake and the Green Lake. Looking outwards from the craters, a vast and fertile plain expands on all sides, bounded by the ocean on the south, and by distant chains of hills on the north. Here and there the plain is studded with other cones, as distinctly lefined as those of Mount Gambier, but on a smaller scale.
' I will not enter in detail upon all the incidents of the opening of the railway. We were greeted by the schook chikiren with a stirring rendering of the National Anthem. We travelled a short distance on the line, and were bauqueted in the evening. I replied for the visitors, and preached federation. In the interval between the opening of the railway and the banquet we went out to see a run with the

Mount Gambier drags. The timber fencing woukd be thought desperate riding in an ordinary Enghish honting-fied. The doubles in and out of a road are decidedty formidable.
' We visited the Wesleyan Chapel at Mount Gambier. The minister described the excellent organisation which enables him to give effective spiritual supervision over a wide district. In the afternoon travelled by special train to Narracoorte. Had some interesting conversation on the land question. From the raifray traftic point of view monopoties in tand were severely criticised. Where tracts of 100,000 or 200,000 acres are in the hands of a single proprietor, the district does not progress as in cases where the land is subdivided into smaller holdings. The large proprietor concentrates his energies on shee]. The ormer of a small tract finds it pars to give a larger proportion of his land to arable cultivation. Subdivision of land encourages population. Monopoly in land has the contrary effect. If the increase of munhers, under good conditions as to standard of living, he one of the ains of goremment, it follows that concentration of ownership and occupation is contrary to public policy. The oljection dis. appears where satisfactory arrangements are made for letting the land on liberal terms. In this case the large proprietor is a proxider of capitat, for which he receives interest, in the form of rent, readily accepting a lower rate than a labourer, with slender security to offer, woukl he compelted to pay if he were the borrower of money instead of the hirer of land.'

The party from Mount Gambier, though rather tired, were able to come on board the racht with us about one o'clock. We had quite a large and pleasant hunch on board, and an 'At home' in the afternoon, when upwards of tro hundred people came to tea.

The yacht was lerthed alongside the graving-dock pier at Williamstown, which made it easy of access. In spite of

Naral Brigate especially attracted attention. Nll the party went to the military dommament in the evening excont Tom and $I$, who stayed at home with Lanly Loch. The wind was rely high and lieen to-day, and semed to increase in volence towards evenins.
 and the wind incessanfly shook all the little lanps which are to he ased at the Jubilee illuminations to ontline the frames of the windows, prodncing discordant and sleep-dispelling noises.

At half-past ten the hay's celebration hegan witl the Govemor's leré, which was trememondy erowded hy all suts and conditions of men. There were two black chef's from Fermshatr. Laty Loch firmt presented her admann to the Gorernor from the laties of Victorid, and then hambeds of other loyal addresses followerl from all parts of the colony. There wats consirkerble confusion, and the seeme, as wo looked down from the gallery at the emt of the ball-room, was very animated and amosing. Directly after the lofer came a grand lunch siten ly the llatox. f went for a long drive, first to St. Kildat, and then on to the Coment of the Good Shepherd, which enabler me 10 form a rery fair idea of the suburbs of Melboume. I was particularly stanch with the enormous wirth of the roarts. Such space appeat's to us monecessary, lout I am told it is meded for the occasional passage of molns of cattle. We met one larce motn of I I should think, more than five hmodred head, hriven ly ladif duzen men with long stock whijs. The stork-men appared to travel comfortahly, for some humiss folloned laden with their simple camp equipment.
 I paid a visit to the law comets, where we were met by Mr. Justice Fiemfort, who, being engaget in connt himself, deputed Mr. Sherilf head to show us rommd. The comets seem
well arranged, and the rooms are much more handsomely furnished than similar places in England. The library attached to the courts was filled with books of reference. There are smaller rooms for consultations with clients. There were also one or two large reception-rooms, in which hong some portraits of former Governors and Judges.

We had an early dimer, and then all dressed for the ball ; assembling first in the large private hall a little belore nine, where we formed onrselves into a procession. The costumes were so rich and correct in their details that the sight must have been very pretty as we passed through the crowds of spectators (who had been arriving for hours, and had filled the pudlic reception-rooms), and took up our positions on the dais.

For the first few minntes the crowding was tremendous, as everybody wished to slake hands with the Goremor and Laty Loch. In course of time, however, the throng hegan to clear away, and for the rest of the evening it was possible not only to walk about but to dance in perfect comfort. It was a magnificent spectacle, and the arrangements seemed admirably conceivel and carried out, the Fountain Court, covered in by a temporary structure, being perhaps the prettiest of all. At one o'clock the doors of the supper-room were thrown open. Not long after supper Sir Henry and Lady Loch and I retired; lont I believe that many of the people did not get away until five o'clock. The illuminations were heantiful, especially among the shipping, both at Williamstown and Port Melbomne, and the little 'Sunbeam' made herself as gay as she could with red and blue lights.

Thursidu!, June 23rd.-The event of to-day was the christening of the central hall of the Parliament Honses, to be henceforward linown as the 'Queen's Hall.' An immense number of people had assembled. The dais, to which the Governor, Lady Loch, and we ourselves were led, had been
placed at the foot of Mr. Marshall Wood's tine statue of her Majestr, and everything was arranged Io ensure a splendid coup drail; but all the details of the ceremony have heen so fully described in the newspapers that I need not repeat them here. It was morth coming all the thonsands of miles we have traversed by sea and land to have the opportunity of witnessing such loyal enthnsiasm.

Directly atter we lelt the hall I hurried on board the - Sunbeam' to receive a conple of humdred guests, and had only just time to get back to Govermment House to dine and dress for the State Concert at the Exhbition building, which was densely crowden. The combined musical societies, under the skiltul leatership of Mr. Herz, opener the proceedings by singing the 'Old Hundretth,' in which the audience joined with great heartiness. This was follored by a grand Jubilee Ode, composed ly Dr. Mackenzie, and by several excellently rendered solos, among the performers being Mr. Beaumont, the tenor, whose 'Death of Nelson' hrought the honse down, and Miss Amy Sherwin, 'the Anstralian nightingale,' whose rendering of " The Harp that once,' 'Within a Mile of Edinhoro' Town,' and 'Home, Sweet Home' was simply perfect.

Friduy, Jume 2fth.-To-tay a demonstration of schomchildren, said to be the largest gathering of the kind erce hell in the colony, took place in the Exhibition buitang. Twenty thousand children must have been there; and as they each wore a rosette and carried a little flag, the scene looked gay as a summer garden. Of course there were the usual loyal anthems: and besides the cheers in the programme the children did a goor deal of happy shouting on their own account. The Bishop of Delloume gave them an excellent address, and all the arrangements were admirally and carefnlly carried out.

Suturnlay, Jume 25\%.-Awoke carly atter a fairly good
night, and set to work at once on my correspondence, which accumulates terribly in spite of my efforts to answer every letter as it arrises. I made many lutile attempts to write up my journal, but was interrupted ly momerous intervievers, especially by secretaries of charitable societies, anxions to get some share of the proceeds derived from showing the 'Sunleam.'

Precisely at twelve o'clock we started for the races at

Selectors

Caultield. The road lay for several miles through prosperouslooking suburbs consisting of villas and a multiture of small woolen houses with corrugated iron rerandahs and roofs. Howerer convenient this material may lie for such purposes, it does not add to the beauty of the landscape. Bungaloms in India, and indeer all orer the East, hok picturesque and pretty, with their deep wooden rerandahs, which must surely
lee mach conler than these compuated iron homses, said to be hot in summer and cold in winter.

We arrived at the racecomse at about a quater to one. The heary rain of last night had swamped the place, and thongh lackily the course was not flooded, it was very heary going, and a great deal of the ground close to the comse seemed quite muder water. I heard a story of a lady having to suim her horse orer a field during this moming's run! lt mas litterly coll, and we all felt glad of the excitement cansed by the appearance of the jockeys, mounted on nice-looking horses. I fixed juy mind on homse number twelve on the card, and thought he looked extremely well as lee cantered plast the stand. The poor animal kept up havely till near the end, When he caught his foot in a lurdle, white groing at a fearful pace, and fell, loreaking his off-ley so badly that he had to be shot on the spot. His jocker escaped with only a serere shaking. I had $n 0$ itea malil I came here what sterplechase riding was like in Anstralia. Tu-day, just before the first race came off, an amblance-cariage was driven into the centre of the gromed and took up a contral position so as to be able to quichly reach any prat of the comise. I was assured that it wats mot at all manal for two or three jockeys to be ingired in one race. Another significant amb permanent aljunct of the Caulfieh raceromse is the neat little hospital, provided with every possible medical and surgical appliance for remedying injuries to the human frame. There are eight heds in the loospital, and I was told that they had at times been all filled with serions cases. Such a state of things degrades the good ald mational sport of steeplechasing to the level of Simaish, bullightis, where the torothlors hear Dass belore going into the ring. It is not wonderful that these dreadful accidents happen, for some of the fences are truly learful, consisting of a big tree cht into form or five pieces, nailed firmly one on top of the other to a height of four
feet six inches. This arrangement prechdes all possibility of the fence yielding if the horse tonches it. The argument in farour of this fence is that it represents the real fence of the country, and that horses are accustomed to jump it. The accidents, which are nearly as frequent and as bad in the flat races, oceur generally from the tremendous number of starters. To-day there were thirty-two in one race and forty-seven in another, and some of the worst casualties were caused by one horse falling and others tumbling over him.

At half-past two we left, for the Govemor had to open the bazaar in aid of the Convalescent Home in the place of Lady Loch, who was mable to leave her room. We drove to the Exhibition building, which did not look half so pretty as yesterday when it was filled by the children. However, everything went off well according to the programme, and after one or two short speeches, and a few pieces on the organ, we made the tour of the bazaar, and tried to find amid the quantities of pretty things something to buy, which is always a difficult matter. From the Exhibition luilding Mr. des Graz and I proceeded to the yacht at Williamstown, whither she had been obliged to return on account of the rough weather off Sandridge. My telegram had not been received, and I had to wait at the station, until a cisil greengrocer volunteered to drive me down to the pier alongside of which the yacht was berthed. After the spacious rooms of Govermment Honse the 'Sumbeam' cabins looked very small, but they are snug and bright. When one is so many thousands of miles away from England the rarious little treasures scattered about them remind me of home and its happy associations, and I feel not utterly cut off firom the scenes I love so well.

We were packed up ready to go to Sir W. Clarke's charming place at Sudbury, when we received a telegram saying that in consequence of a death in his household he could not receive us; so all our plans have to be changed. Tom joined
me on board the yacht shortly before midnight, afler a fleanamt evening at the banquet given ly the Mellomme banch of the Imperial Federation League. ${ }^{1}$

Tuestay, June 2Sth.-I was awakened early by the pattering of rain on the deck, and on looking through the portholes I could not see three yards ahead for the curtain of wet mist which seemed to hang before them. Tom was anxious that we should give up our projected journes, for he was much afraid of the risk I shoutd run from the cotd and damp. But, just as I always in England go to a meet on a fine day because it is fine, and on a wet day becanse I hope it witl clear up, I determined to start now. I was already dressed ly ten o'clock, when the Governor, and a few others whom Tom had inrited to accompany him as far as the Heads, arrived. The fog was still so dense that the deputy harbour-master would not allow the yacht to be mmoored; and after waiting some time, the Goremor returned to Melfoume, whither I also went by the 10.45 train. Tom-who had settled to take the yacht round to Sydney-had to postpone his departure, as it was impossille to more out; and we atterwards tearned that many accidents happened during the fog. From Spencer Street Station we drove across to Princes Bridge Station, and thence proceeded at a snait's pace-still on account of the figgout of the city, till we got to Mitcham, when it began to clear. A few minutes afterwards the sun came out briftianty fike an English summer's day, and when we reached Lityrate it really felt quite hot.

Messis. Cobl, \& Co. had sent a Tom Thumb) sort of coach and a buggy, into which our nmmerous party could ly no means squeeze. However, we packed both vehicles as fult as possible, and sent for another conreyance, famitiarly known as a 'Tip-up,' its narrow whects making it liable to upset except on good roads.

About three o'clock we reached St. Hubert's, a pretty house, the owner of which is now in England with his fanily. One ol his sons remains to manage the estate. We were soon comfortally established in pleasant rooms looking on to a sumny rerandah. The view from our windows was perfectly enchanting, stretching away over the distant mountains, now covered with snow. A tremendons swamp hes between the house and the foot of the range, which accounts for the heary mist that rises at sunset. My room was delicious with a blazing fire, and after lunch we went round the cellars with our kind host, and saw all the interesting and various processes of wine-making. Mr. de Castella has introduced the hest methods of preparation, as practised in Europe, and has succeeded in producing wines of a quality equal to the finest supplied from the Frencl and German vineyards. By the time we had finished our tour of inspection it was cold and dark, and after dimer we all went early to bed.

Wretuestiny, Jone 29th. - We were called at half-past six, and soon after nine made a start, in two coaches, on a cold and wintry morning, for Black Spur. Our way first lay through the rineyards, which were not in their best looks, having only just been scarified, as the process is called. It means cutting off the branches and reducing the vines to small and ngly bushes, destitute of leaves at this season. On our way we passed a large 'selection' belonging to Mr. McNabb, who is a great judge of prize cattle and stock of all kind, and who, like many other Scotchmen in the colony, seems to have prospered in everything he puts his hand to. Further on we came to Koordal, a 'reserve' for the aboriginals. It has a nice house, and the land is good. The aboriginals are rapidly dying out as a pure race, and most of the younger ones are hall-breeds. Even in this inclement weather it was sad to notice how little protection these wretched beings had against its severity. We passed a miserable shanty by the side of the
road, scarcely to be called a hut, consisting merely of a lew slabs of bark propped against a pole. In this roadside hovel two natives and their women and piccanimnies were encamped, preferring this frail shelter to the comfortable quarters provided for them at Koordal. The condition of the men of the party contrasted very untavourably with their appearance when they presented themselves mnder the charge of Captain Traill, the Goremor's A.D.C., at his Excellency's Jubilee lerce last week. To-day they looked like the veriest tramps, and were most grateful for a bit of butterscotch for the baby and the shilling apiece which we gave them after an attempt at conversation.

From Healesrille we rattled merrily orer an excellent road, the scenery improving every mile, till we reached the picturesque little villase of Fernshaw, a tiny township on the river Watt. Important as an absolutely pure water supply is to a city like Melboune, where the present provision is anything but satisfactory, we could not help regretting that this hamlet and several others must be cleared away in the course of the next two years, in order to provide space for the gathering-ground of the city's drinking water. The increased facilities for travel afforded ly the railway, now nearly completed to Healesville, will, howerer, enable people to make new settlements on the other line of hills further from Black Spur. The memory of Fernshaw will always linger pleasantly, and I rejoice that I hare seen it before it is swept off the face of the earth liy the requirements of the ling city near it.

From Femshaw up the Black Spur must be a perfectly ideal drive on a hot summer's day, and eren in midwinter it was enchanting. The road is cat through a forest of high eucalyptus-trees, varying from 100 to 450 feet in height, and from twenty to fifty, and eren serenty, feet in girtl. At intersals roaring torrents rash down gullies overgrown with tree-ferms, and full of dicksonia-antarcticas and alsophilas.

To-day they looked rery curious; for, instead of growing as usual, with their fronds erect or nearly level, all were bent down by the weight of the late heary fall of snow, so that they resembled graceful umbrellas and parasols. So fairy-like was the sylvan scene that I half expected to see the cmrved branches open softly and disclose
naiads or wood-nymphs. I had always been told that these fern-gullies were charming, but $I$ never thought anything could be half so lovely as this romantic rarine. If only the sunlight conld lave glanced throngh the trees and thrown some shimmering sunbeams on the bright green leares, it would hare been epen
more delightful. After climbing up the hill by a steep but good road we arrised at Myrtle Gully, called after the trees which grow there. They are quite different from our ilea of myrtles, though their dark and glossy leaves contrast finely with the lighter green of the young tree-ferns and the bluegreen of the eucalypti. My botanical ileas are getting quite confusel and upset in Australia, and I must study the new forms with the assistance of some lind director of gardens. It is necessary to menderstand the classification of these plants, for the common names are entirely deceptive and utterly opposed to one's preconceived ideas of the species to which they belong.

We climbed up to the summit of the hill, and on our way saw some rail-splitters at work. These men are peculiar to Australia, and I cannot but think they do harm to the country. On payment of a fee of $\mathbf{r l}$. a year they are allowed to go into the forests and lill the finest trees by 'ringing' them. Often the trees thus dealt with are left to die as they stand and disfigure the forest. In this way an enormous quantity of raluable timber seems to be uselessly destroyed. The rail-splitters remind me of squirels, who niblle off muts before they are ripe, and then take a dozen away to their winter's nests; or of a vixen, who will bite the heads off trenty chickens and only carry one back to her culs.

On our retum to the comfortable inn at Fernshaw we found cheerful fires ready to welcome us. This inn is rery prettily situated. At the back runs the river Watt, brawling over its stones like the reriest Scotch salmon-trout stream. It is full of excellent imported trout, which flourish well in these antipodean waters and attain a weight of six or seren pounds. Across the river is thromn a primitive bridge, consisting of the trunk of a big tree cut in halves. Very slippery and slimy it looked, and I did not feel inclined to attempt the perilous passage. Near the imm were some extremely nice
gardens with the trunks of old tree-lerns filled with flowers, producing a pretty effect as rustic flower-pots.

Precisely at half-past two we started on our homeward journey, and with the exception of a few minutes' stay at Healestille to water the horses, and at the blacks' camp to hare a little more chat with them, we did not stop anywhere

on the way. Since morning the hacks had turned their huts right round, for the wind had shifted and they wanted shelter from its severity.

At 5.15 we reached St. Hulert's, just saving the daylight orer the last seren miles of bad road. We all felt better for our pleasant expedition, though the violent joltings of the rond and the bumpings of the coach were decidedly fatiguing.

Thurstly!, Jime 30 th.-We were called at half-past six, and hastily got up to pack off the luggage before setting off at eight, on a fine though misty morning. We lad a delightlul drive to the station at Lilydale, after lidding a regretful adieu to picturesque St. Hubert's.

Once in the suburbs of Nelbourne, it, was necessary to crawl along at a snail's pace on account of the numerous express trains rumning into the city at this early hour. We did not reach the terminus until nearly eleven o'clock, and were glad to drive quickly to Menzie's Hotel for breakfast. A large mail arrived for us lrom Wellington, as well as heaps of letters and telegrams. At half-past twelve Mabelle and I went to the Botanical Gardens, where Mr. Guilfoyle, the superintendent, met us, and was good enough to allow me to drive all round the gardens. He kindly explained the arrangement of the plants, clearing away many botanical difticulties which have puzzled me ever since I landed in Western Australia. I do not think I ever saw so well-arranged and beantiful a garden as this, and never have I had so intelligent and lind a cicrone as Mr. Guilfoyle. There is a heantiful lake in the gardens, well stocked with different species of wild-fowl. We drove all orer the exquisitely kept lamn, yet the carriage-wheels appeared to make no impression. The grass grows from a mixture of buffalo and other kinds of grass-seeds-a combination which produces a velvet-like sward about three inches in depth, and apparently incapable of injury. At one part of the gardens where the carriage could not possibly penetrate, Mr. Guilfoyle had thoughtfully provided a chair and two men to carry me through the ferngully. This rivals what we saw at Fernshaw resterday, and I was able to observe what I could not well see there-the undergrowth of smaller ferns and the parasitic ferns growing on the trunks of others. I was duite sorry to leave. Mr. Guilfoyle sent us away laden with interesting botanical
specimens, and gave Mabelle and me each a sweet-smelling bouquet of daphes and white camellias.

We lunched at Government Honse. After bidding goodbye to H.E. and Lady Loch, from whom we have received so much kindness, we went to Menzie's Hotel, calling on our way at Cole's Book Arcade, which is one of the sights of Melbourne. A most curious place it is ; consisting of a large areade three stories high, about the length of the Burlington Arcade in London, though perhaps rather wider. The whole place from top to bottom is one mass of books, arranged in different styles, some according to price and some according to subject. It was crowded with intending purchasers, as well as with readers who apparently had not the slightest intention of purchasing, and who had only gone there to while away a leisure hour, and to listen to the band, which discoursed sweet music to them whilst they read.

After strolling through this wonderful arcade, we collected the luggage from the hotel and sent it off to the station, following ourselves in time to catch the 4.55 train to Seymour.

Friday, July ist.-We left by the 9.30 train for Shepparton, in pouring rain, passing through a flat rich grazing country, which seemed well stocked with sheep. The grass looked luxuriant, and must be excellent for dairy produce. The fences were different from any we had seen before, made of felled trees laid lengthwise all round the paddocks. As may easily be imagined, they form a formidable obstacle for young horses, many of which were rumning in the paddocks. All this was interesting, but the beauties of the distant landscape were quite blotted out by the rain and mist. However, when we crossed the Goulbourn, the sun began to try and peep through the clouds, which had hitherto hidden everything from our riew. Shepparton is a rapidly growing township, with 2,000 inhabitants. A few years ago there was not a single house in the place.

NORTH HEAD SYDIVEY HARBOUR

The tomship of Sheprarton, like all Austrahian settlements, is arranged in spuare blocks, the houses consisting chiefly of four- or six-roomed cottages of one story, hailt of wood or corngated iron. At present the whole phace appears to be under water, hot its inhahitants say that in smmmer it is leantitul, and the pasturage certanly looks excetlent. In the course of our drives we went to Mr. and Mrrs. Robinson's house. There I met some ladies and gentlemen interested in amhulance work, to whom I said a few words and gare some papers. I hope they will commmicate with the head-centre at Melbourne, and oldain permission to establish a bramehcentre here. Eserghody seems to agree that it nonld be most useful, as the doctors are few and far between, and there are only fire medical men to an area of 1,000 sptare miles! We left ly the 4.30 train for Sermour, Mr. Sose driving me to the station in his carriase with his pretty pair of ponies. They are said to be perfectly quiet, and I suphose they are, according to Anstralian ideas; but they did not come up to my notion of docitity. Besides sundry kicks and lnock-jumps, they had both legs over the sphinter-har ance, one leg over the

sjuney Harbour
pole twice, and another leg over the traces, which fortunately came unfastened, or in the regular kicking match which ensued some mischief would have been done. I expected every minate that the little carriage would have been broken to pieces, and that we should hare been landed at the bottom of the quagmire orer which the road appeared to run.

Seymour was reached at 6.30 , just in time to change into the express, and at Albury we were again transferred, at 10. 30 p.s., into Lord Carrington's carriage, sent up from Sydney for us.

## CHAPTER XIV.

NEW SOUTII WALES.
Suturduy, July znd.-When I awoke in the morning I saw a landscape of a rery different character from the scenery of Victoria, showing that we were getting into a warmer climate.

Our train was late, and all were glad when Sydney was at last reached and we found ourselves driving swiftly to Goremment House. The way lay through crowded streets resembling the Hammersmith Road leyond Kensington. There were some pretty views of the harbour down the narrow streets
through which we drove on the way to Government House, a building in the Gothic style.

The alternoon was so fine that everybody longed to be out of doors, and I enjoyed a stroll in the gardens-from which there is a lovely riew of the harbour-immensely. I had heard so much of it that I had fully expected to be disappointed, but it more than fully realised all my preconceired ideas of its attractions. The water was crowded with small boats, and the Volunteers, disappointed in the non-arrival of the 'Sunbeam,' rrere taking their exercise in Macquarrie Fort. So deep is the water beneath what is called the Tarpeian Rock that the big ships of the Orient Line, the P. \& O., and other giant traversers of the ocean, can easily lie alongside. We spent a quiet erening, and were glad to go to bed early after our recent short and disturbed nights. Before retiring, however, arrangements were made for a steam-launch to meet Tom in the 'Sunveam' on his way in from the Heads, and to tell him to stop at Watson's Bay, as the Volunteers wished to go out to meet him. Saturday afternoons and Sundays are their only possible days, and if he were to wait for Monday it would be a serions disappointment to hundreds of people. Large numbers were waiting about this afternoon on the lookout for the 'Sunbeam,' and they seemed much disappointed that she did not come in.

Sunday, July 3rd.-After a refreshing night I arroke, and was soon at the window enjoying the view orer the harbour. The morning was misty, but the effects of light and shade were most beautiful. At 10.30 the Governor and Lady Carrington, with their children, his Excellency's staff, Colouel St. Quintin, myself and others, went on board the steamlaunch and steamed down the harbour towards Watson's Bay. The vierrs on erery side were charming, both looking up the harbour towards Parramatta and also in the direction of the Circular Quay, where the lig mail steamers lie. The shores of
the varions little creeks and inlets were studded by fime houses with pretty gimdens stretehine down to the blue waters of the hatbour. We passed Clarkis Tslame, which is the frarantine station tom dogs, Jarling l [am being the quarantine station for homan beings, and then we saw the "Smbeam' lying at anchor in the little inled čalled Watson's bay. The gis was soon sent alongside, and we were speedily on boarl. I was delighted to see Tom looking so muth hetter, thongh he was still obliged to wear a pair of ireen spectacles. After a somewhat lengthy inspection of the racht Lond and Lady Carrington and party returned to town, and we hat service on board.

Precisely at half-past two, as agreed, we weighed anchor, and moceeded show up the hathour under steana. Not seeing anything of the boats, which treve aloo to leave Sythey at 2.30 , we steamed as slowly as possible in order nont to moet them too soon. A very pretty sight it was when we beheld the Tolmonteers approarhmes in two remular lines of boats, accompanied by crownts of people in small sabling aud rowing boats, as well as lamohes and stemmers, all apmarently perilously orerloaded with passencrers.

When the Tolmenters reached the yarht they all tossed their oars and stoot up and saluted. Then the commanding officers came alongsile, and we received them on looard. It really was a lovely sisht, and my only wish was to be, like the famons lind, in two places at once-mamely, where I was, to help to entertain the Tolunteers and thank them for their wam and lindly welcome, and on shore to look at the dear old' Sunbeam'smommed by the mosquito theet, dirough which she had considerable rlithenlty in mating her way without donge amy damage. It took some time for all the officers and men to come on loard to have some retreshment and look over the vachit, and it was therefore rather lato betore the commanding officer rowed us ashore in his gig.

We landed at the man-of-war steps, close to Government House, where a large crowd had assembled to give us another welcome. They formed a little lane for us to pass through, cheering lustily, and smiling and nodding as if they were glad to see us. There was nothing format or obtrusive about their welcome. It was, in truth, a real, warm, honest greeting from friends across the sea, and it touched both Tom and myself deeply. All such demonstrations invariably give me a choking sensation in my throat, and I was not altogether sorry when we had made our way through the crowd of kindly welcomers and reached the steep pathray leading to Govermment House. Halfway up we could stop and survey the scene, and I was able to partiafly gratify my wish to see the gacht from the shore with the hoats around it.

After a short rest we had another quiet evening, Tom coming to dimer, but returning to sleep on board the yacht. I went to hed early to try and nurse a bad and rapidly increasing cold, caught during the wet joumey between Metbourne and Sydner.

Momdu!, July q $^{\text {th. }}$.-I awoke at five, amd wrote letters. The doctor would not hear of my ging out, as my cold was no better.

It continmed fogor all day, and the chitdren hand to content themselves with skating and latttedore and shattlecock in the verandahs. Lord Carington, Tom, and Mabełte went for a long watk, calting on Cardinal Moran, and paying risits to the ficture-gaflery, the Angtican cathedral, and other places; and after an early dimer at 6.45 afl the party went to the meeting of the Royal Humane Society. I was bitterly disappointed at being mable to attend, and perhaps do something to ancourage the friends of the St. John Ambutance Association.

Tucstr!y, July 5 th. -Atroke early, and had a busy morning. The day proved lovely, so I was allowed to walk in the garden.

After honch we started in a carriage-and-fom for a long bout most delightinl drive to the Gonth Head. We passed through the far-extending submils of Sydney with their goorl houses and gardens. It was rery chamming to have the occasiomal glimpses of the many inlets and creeks of the harbour. Farther on we reached the real hash, full of flowers, the ground being covered with the red and white epactis, and

Simomer सhll Craet
with varions banksias, hoyas, and other flomers. At the South Head the riew of the city, through the light reil of smoke and fog which hung orer the laniscape, and heyond the lighthonse on the other site orer the ocean, was rery fine.

There was a large and pleasant party at dimer, and in the
evening an 'At home,' at which I was interested to meet several Sussex people. The world is rery small after all!

Wetnestay, July 6th.-I had a busy morning, and at noon went on board the yacht, returning by three oclock to meet Mr. Montefiore at the large picture-gallery. Thence we went to look at Mr. Bray's collection ol curiosities from New Guinea and the Islands, and spent a pleasant and instructive hour. Some of our party returned to Gorermment House for an early dimner, while Tom, Mablelle, and others went on board the yacht to entertain the officers of the Naral Volunteer force mhich has been estallished in Sydney, on the model of the corps which Tom was instrumental in raising at home. At eight o'clock I went down to the shore and looked at the Volunteers drilling in the open. They certainly are a splendid body of men, and their drill is quite wonderful. I have never seen such grod cutlass drill anywhere, and I have 'assisted' at many similar inspections.

Thursth!y, July, zth.-To-day we called on the Mayor, and were taken all over the fine buildings which are being erected as a memorial of the Centenary of New South Wales. Afterwards tre visited the Picturesrgue Atlas Printing Office, and watched the processes of printing, engraving, lithographing, \&c. Dinner was again early, and after it, Lady Carrington, Mabelle, Mr. Egerton, and others went to a Zerhini quartette, whilst Lord Carrington, Tom, and the remainder of the party set off to a shoeblacks' concert, the performers at which had originally been some of the roughest ragamuffins in the city.

Tuestay, July 12 th.-The morning was pouring wet. Tom started at half-past nine to meet Mr. Inglis, who lad arranged to conduct him round the docks at Cockatoo Island and over the 'Yernon' reformatory-ship, an institution which owes its origin to Sir Henry Parkes. He was much interested with what he saw on board the 'Ternon.' The most hopeless
characters do not seem beyond the reach of the wholesome influence of the band.

At $1 .+5$ some friends came on boad the 'Sumbeam' to lunch, and directly afterwards people hegan to arrive for an 'At home,' which lasted motil 5 r.m. Luckily the weather cleared a little, or I do not linow what we shoud have done to amuse our gnests. There were a few gleams of sunshine at intervals, which served to dry the awnings and to make things look more cheerful and comtortable.

At five o'dock we all went to the Legislative Council and heard Mr. Watts speak, and then to the Legislative Assembly, where a debate was also going on. We were afterwards shown orer the Chambers and their libraies by Sir Henry Parkes. I admired the dining-room, which was much prettier than that of our own House of Commons. From its batcony there is a magniticent view of Sydney town and harbour. 'Ihe libraries seemed wetl furnished with boots and looked thoronghly comfortable. It is the oldest Partimment House south of the Line, having been buitt early in the century. The members all seemed wonderfully fresh and watired, considering that it was 7.30 a.m. before the House rose this morning. The powers of hmman endurance are possibly strengthened by the fine climate.

Wednesduy, July I 3 th. -I had, as usual, a busy morning, and left at eleven o'clock, with Tom, Malelle, and Captain Gascoigne, to lunch on board the German man-of-war Bismarck.' Captain and Mrs. Bosanquet and several officers were there; and we had a pleasant party, enlivened by the strains of an excellent band. We had to hury away directly afterwards to be in time for the meeting which the Governor had kindly convened at Govermment House in comnection with the St. John Ambulance Association. The meeting, held in the drawing-room, was well attended and successinu. That over, there was onty scant time to rest before an early dinner,
after which we went to a meeting of the Geographical Society at the Freemasons' Hall, where Mr. Bevan the explorer gave us an interesting account of his fourth and latest royage to New Guinea. These explorations were undertaken, the first in a Chinese juonk, the second in a big cutter, the third in a schooner, and the last in the stemer 'Victory.'

Thursclay, July rath.-The children and Tom went out riding, and I had a busy morning with Mr. Wright, working until hall-past eleren, when I went with Mr. Bevan to see some interesting New Guinea curiosities at the estaltishment of Messrs. Burn and Philps, the enterprising firm who sent him out to make his explorations. Tom had made an appointment with Captain Hammill to visit the Goodenough Sailors' Home, but, haring a great deal to do on loard the 'Sunbeam,' he asked me to go on his behatf and meet the manager and the committee of the institution. We had great difficulty in finding the place, and, after driving hatf orer Sydney without discovering its whereabouts, went to the town-hall for information, and were there directed to two houses-Trafargar House, and the Goodenough Home, established by Sir Anthony Hoskins when he was out here as Commodore. The houses in both cases are small, but look beautifully clean.

Mr. Shearston, the manager, seems a perfect enthusiast, and too much cannot be said in praise of his self-deniat. He has given up the whole of his private house, except one bedroom and the tiniest little scrap of an office, for the purposes of the Home. Truly the promoters of the morement deserve every assistance in their good work; and it makes one feel inclined to help them to secure the new site so urgently required, when it is seen how earnestly they labour in the good cause themselves. They not only take in good characters, but go into the streets at night and pick up sailors, no matter how intoxicated they may be. They put them to
hed, and endearour to send them back to their ships in the morning, so far recovered as to escape reprimand and perhaps dismissal. The inspection of this institution took some time, and on our way back we passed the proposed new site for the Home.

Captain Hammill and Mr. Bevan lunched with us on hoard the 'Sunbeam,' and later on the yacht was shown to a large number of people. Atter Lady Carrington's 'At home' in the afternoon, Tom, TaJ, and Captain Gascoigne went to dine at the Yacht Club, and we had a quict dimer, after which I did a good deal more work with Mr. Wright.

Fritay, Jnl!, I 5 th. - An early start had to le made this morning in order to meet Sir Henry Parkes at the station at nine o'clock. Tom, Baly, and I were the only members of the party who turned up, and we found that Mr. Salomons and the Chinese Commissioners had been insited to accompany us. Precisely at nine re left the station in a comfortable saloon carriage, and, passing through the suburbs of Sydney, reached Parramatta at 9.30. This is one of the oldest townships in New South Wales. Conspicuous in the landscape rise the double spires of its handsome church, which is more than a hundred years old. The township has for years past derived considerable importance from its wool trade and manufactures; and has now an excellent fruit trade, which has sprung up quite lately. Fruit-orchards surromd the torm, and the orange groves look bright and green and beautiful with their shiny leares and globes of golden firuit. It was almost accidentally that oranges were first grown here. The unexpected success of the first few orange-pins, which grew and prospered amazingly, led to the industry leing taken up, and splendid orange groves now surround the town.

Alter learing Parramatta our way still lay through orchards and vineyards, until we reached Seven Hills Grove, commanding a beautiful view. Thence we went on to Blackitorm, which
 number of aboriginals who tormerly lived in the neighbourhood; but they are now almost extinct. At intervals we either crossed or ran alongside of the old bullock-track, now a good high road, to Bathurst. Bathurst can now be reached in a few hours from Sydney. In the old times it took four days to get there by coach, and much longer, of course, by brllock team! We crossed a lurge river, the Nepean, passing through some charming fern-gullies, and soon afterwards reached the zigzags of the railway. They are so abrupt, that instead of the train turning round, it is alternately pulled and pusked up the steep incline. This seems to me a dangerous plan, and it certainly does not economise labour or steam force. It was interesting to find at one of the stations that the engine-driver who was taking the train up had
worked for Mr. Brassey for many years in France and clsewhere, had married Tom's nurse, and had danced with me at the ball given in the engine-sheds at shrewsbury at the great fètc on the occasion of our marriage. At another place where we stopped the station-master for many years ocenpied a similar position at Aylesford, near my brother-inlarr's place. They were both anxions to come and see the yacht, and I was rather amused to hear at lunch that while we were going up the mountain they had immediately returned to Sydney and had gone on board.

The riew from Springwood is leantiful, and close by lies Sassafras, or 'Flying Fox' Gully, so called from the mumber of flying foxes found there. We next passed Falconberg, Sir Hemy Parkes's place, and went on to Latroon, where we stopped a short time, and where a man bronght us some curious little black suakes-great pets at present. Not far from here are the beantiful Wentworth Falls, and the siews became superl; I had not expected anything half so lovely. Distant glimpses of undulating forests were interrupted by abrupt sandstone cliffs, so steep that it was improssilile not to believe a large stream ran beneath them. There is no river here, however, although the many small creeks and rivulets make beautiful falls, tumbling over the sandstone cliffs through luxuriant creepers and tropical ferns. It is impossihle to exaggerate the beauty of the scene. The charm of the landscape was the really Indian blue of the distant hills, from which they derive their name of Blue Mountains. It is not a blue haze, but a vivid blue, with tints varying from darkest indigo to palest cernlean blue; but the colour is everywhere intense, and there are no half-tones. Perhaps one of the most attractive views is that just before reaching I atomba, nearly 3,500 feet above the sea-level. The train was stopped before reaching the station to let us admire the distant landscape. I shonld have liked to stay for hours.

the brush of the painter. On our return journey the noombay sun had lispersed the mists, and all the delicate details of the more distant landscapes were brought clearly into view. We travelled at a terrible pace, and the sharpness of the curves threatened every moment to send the train off the line. These sudden turns and jerks had the effect of making us all rather uncomfortable, and poor Bahy and I felt quite sea-sick. The sensation was the same as when the ship makes a deep curtsy and seems to leare you behind as she dips into the wares!

There is a lameh line at Katoomba to the Yenoolan or Fish River Caves, which I shoud have liked to have visited had there been more time. I had to console myself with the reflection that I had seen the caves at Adelsberg, Neptune's Cares in Sardinia, the cares at Moumein, and other rast limestone cates in varions parts of the world.

After passing Sir Alfred Stephen's magnificent place we reached Falconberg, and hy this time I felt so tired that I was truty glad of my carrying-chair. I do not think I coud hare walked even the short distance between the station and the house. Arrived there, I was obliged to ask leave to lie down instead of going to see the beautiful fern-glens with the rest of the party. It was a great disappointment. I was able, however, to enjoy the lovely distant view from the verandah, as well as the closer riew of the rocky sandstone clitfs and fern-clad gullies; and I could hear the mocking note of the rarely seen lyre-bird, the curious cachinnation of the laughing jackass, and the occasional distant note of the bell-Jind. Even this brief rest amidst these pleasint surroundings refreshed me greatly, and I felt much better when later on we resumed our jouney. The engine-driver was told to go slowly round the sharp curres, and we were spared a repetition of the unpleasant experience of the morning. We arrived in Sydney a little after six, feeling much indebted to Sir Henry Parkes for liss great kindness.

There was no time to think of rest, for I had to dress immediately and go with Tom, Mabelle, and others to the Ambulance meeting at the town-hall. It was a very good one, and afterwards the committee of the Williamstorn and Port Melloourne Sailors' Home presented me with a testimonial, in order, as they said, to express their gratitude for what we have been able to do for them. Tom and Mabelle went on from the meeting to Mrs. Tooth's ball.

Suturday, July I6th.-I arroke feeling so tired that Dr. Hoffmeister made me remain in bed till the middle of the day in order to keep quiet, though I contrived to get through much work with pen and pencil.

Lunch was ordered early, and a little after two we went on board the yacht to receive the ladies of the Wollahna centre of the St. John Ambulance Association, to whom, according to previous arrangement, I presented certificates. At halfpast three the contractors who gave Tom the charming picnic up the Hawkesbury Rirer last Saturday ${ }^{1}$ came on board with their wives and lady friends, and were soon tollowed by the members of the Royal Sydney Yacht Club and their friends. The boys' band from the 'Vernon' played extremely well during the afternoon, the music and brilliant sunshine adding cheerfulness to the proceedings. When the general company had lel't, the boys had a hearty meal of tea and cake, and were delighted at being shom orer the yacht.

Tom and I were obliged to hurry away at half-past four in order to see the Nayal Brigade at exercise, under the command of Captain Hixson. A very interesting sight it proved to be. Their drilling and marching past were admirable, as were also their rolley and file firing; while the rapidity with which they formed into rallying squares to resist cavalry was really marvellous. Towards the close of the proceedings it was growing dusk, and the bright-coloured tongues of flame

[^3]from the rifles showed sharply against the dark blue sky. Tom presented the medals to the men and made them a speech; and after all was orer we returned to Gorermment House.

Sunduy, July Izth.-Tom and Mabelle went on board H.M.S. 'Nelson' at 10.30 A.n. for church-service, and then on to H.M.S. 'Opal,' where they met Admiral and Mrs. Fairfix, and Captain and Mrs. Bosanquet, and a few other friends.

Cook's IIOnument, Botany Day

The day turned out so lovely that I was persuaded to go round the Botanical Gardens in a hath-chair. I admired immensely the taste with which these gardens are laid out, and the skill with which a great portion of the site has been reclaimed from the sea. What seems so puzzting in this climate is the existence of tropical, semi-tropical, and temperate plants side by side. I saw riołets, geraniums, roses, strelitzias, in fułt bloom, some growing under the shade of pahms from Ceylon, Central Africa, and the warmest parts of North Australia,

While others flourished beneath the bare branches of the oak, beech, birch, and lime trees of the old country.

In the afternoon I had intended to go to the cathedral with Lady Carrington, but felt so unwell that I' was obliged to lie down for a time, and then sit in the sun and try to recruit. I had, howerer, to go to bed at fire ; but I made an effort and got up again at seven in order to appear at our last dimner at this charming house, where we have spent so many happy days and received so much lindness. After dinner we had a long talk orer new and old times, and all felt quite sad at the prospect of the ineritable parting which must come to-morrow.

可

## CHAPTER XT.

NEIF SOUTH HALES (contimued).

Montuy, Juty I Sth.-Lovely sumrise-the last we shall see, alas! in this beautiful place. Tery busy : rather a worrying morning ; so much to settle and arrange. Did some final shoming with the children. Met Lord Shattesbury at lunch. Went off to the 'Sunbeam,' feeling quite sad that the moment of departure had at last arrired. The Admiral came on board 'Sunbeam' at the last moment, bringing some violets as a farewell offering. Sailed slowly array, and gradually lost sight of the Heads in the darkness.

Tuesiluy, July igth.-At half-past trelve Tom came below to announce our arrival off the port of Newcastle. The wind
had been so fresh and fair that we made a smart run of seven hours, sighting the lights at Nobly Head at about half-past ten. Our head was then put off the land, and we hove to, to wait for the tug. This is a process which to the old salt seems a pleasure nearly equal to that of going ashore, at all events to dropping anchor in a well-sheltered harbour. Though I certainly cannot call myself an inexperienced sailor, it appears to me to be the acme of discomfort. Eren in a heary gale it affords but slight relief from the storm-tossed motion of the ship. On the present occasion it was a change from pleasantly gliding along through the water at a speed of mine or ten kmots an hour to a nasty pitching motion which made us all very wretched. Everything began to roll and tumble about in a most tiresome manner ; doors commenced to bang, glasses to smash, books to tumble out of their shelves, and there was a general upset of the usually peaceful equilibrium of the jacht. So umpleasant was this, that I suggested to Tom that, instead of waiting outside for the reception tug, we should get up steam and go into harbour at daylight so as to have a few hours' rest. This we did, and glided into the harbour precisely at 5.30 A.m., anchoring just off the railway-pier, and quite taking the good people of Newcastle by surprise. The town presented a great contrast to its mamesake at home, for the morning dawned bright and lovely, with hardly a smoke-wreath to intercept the charming viers. We looked out on a noble river with a busy town on its banks and low hills in the background.

About eight o'clock the chairman of the reception committee, Lieutenant Gardner, of the Royal Naral Brigade, came on board to arrange the order of the proceedings. Everybody was most kindly anxious to show us everything there was to be seen, but Tom thought the lengthy programme mould be too much for my strength, and suggested that the original arrangement should be adhered to. Punctually at half-past
 which a ship can take in a thousand tons of coal in ten hours. From the cranes we went a little further up the harbour, to the landing-place, where a dense crowd eagerly arwaited us. Carriages were in readiness, Dut Tom rather upset the plans loy his usuat wish to walk instead of going in state in a coach. I fear he sererely tried the lungs and legs of his entertainers by taking them at a brisk pace up a steep, hill to the high-level reservoir. As soon as I got into the
carriage a basket of fragrant violets was given to me by the school children of Lampton, one of the collier townships in the neighbourhood. We drove past the reserve and up to the reservoir, from which there is a fine view of the town and surrounding country. We stayed a long time at the top of the breezy hill watching the dark blue waves turn to pale green as they curled their white-crested heads into great rollers and dashed against the steep cliffs of the many little headlands and promontories of the bay. Looking in another direction, the view extends over the rich allurial plain which surrounds Newcastle, thickly studded with houses and colliery townships. One new colliery has been started quite close to the shore, and not improbably it will be carried, like the old Botallack mine in Cornwall, right under the sea, where the richest seam of coal runs. While we were taking in the characteristic features of the landscape the sum became so powerful, in spite of a cold wind, that umbrellas and sumshades were found necessary.

After learing the reservoir we drove through another quarter of the town. Every house had at its door a smiling group of people who greeted us warmly. Leaving the town, we went on to Nobby Head. The position is fortified, and garrisoned with a company of the Permanent force. From this point the town is better seen than from the reserroir, and there is a good prospect of the entrance to the harbour. Though it was comparatively caln to-day, the wares rolled in with great force; and it is said that in bad weather the sea is perfectly frightful. Just inside the Heads, not thirty yards from the shore, a small black buoy marks the spot where a steamer went down with every soul on board, not only in sight of land, but actually in port. While Tom was inspecting we rested in the signal-station and talked to the signalman.

On leaving the fort we drove to Mr. Black's wool-shed, where the various processes of dumping and preparing the
wool for shipment were explamed to us. It is wonderful to see how the bulk of a bale can be reduced hy hydraulic pressure. The shed is perfectly empty at this moment, but in a few weeks it will be at its fullest, for the shearing season has already commenced. To-day its ample space was utilised to hold a large luncheon-party, at which a number of tarties and gentlemen were present. 'The speeches at this hanquet, though short, were good. Having partaken of their hospitable entertaimment, we were conducted ly our kind hosts into a train which was waiting, literally, at the door of the shed, and were taken off, more or less through the streets of the town, to the Nerreastle Colliery Company's Works.

As soon as we cleared the suburbs the country hecame very pretty, and the place where we left the train, to descend the coal-mine, was really quite romantic, and entirely different to what one sees in the Black Country at home. There were sereral charmingly designed triumphal arches for us to pass under, all made of semi-tropical flowers and patms. The contrast between these flowers and plants and the brisk keen mountain air, blowing cold and fresh in spite of the hot sun, was remarkable. After admiring the heanty of the varions specimens of flowers, and inspecting the works at the pit's mouth-where men were hard at work filling skips and emptying them into trucks waiting for their loarts-some of the party got into the cage and descended 400 or 500 feet into the bowels of the earth. A few of the ladies dectared they felt nervous; but there was really nothing to make them so except the total darkness. Arrived at the bottom, we fomd many miners with candles stuck in the front of their hats, and carrying lamps of the simplest construction, a piece of waste stuck into the spout of an ordinary can filted with what is called China oil (a decoction of mutton fat), waiting to light us on our darksome path. Several trucks were ready prepared, into one of which I got with the children, and we
started, a farge and merry party. On our way in we met all the miners coming out, for they leare off work at 3.30 in order to be at the pit's mouth at four, only working eight hours a day.

All mines bear a greater or less resemblance to each other, whether they contain black diamonds, like the one in which we then found ourselves, white diamonds, gold, silver, tin, copper, gypsum, or any other mineral. There is the same descent in a cage, the same walk through workings-higher or lower, as the case may lee-or ride in a trolly or truck along lightly-laid rails, and the same universal darkness, griminess, and sloppiness about the whole affair, which render a visit, however interesting, somewhat of an undertaking. This mine seemed to contain a particularly good quality of coal, and the sides shone and glistened in the famplight as we passed along them. Our walk through the levels of pit ' $B$ ' was much longer than I had expected, and must have been quite haff a mife. The temperature mas always over $80^{\circ}$, the atmosphere sometimes rery bad, and the walking rather uneven. Thousands, not to say millions, of cockroaches of portentons size enlivened if they did not add to the pleasure of the walk. We passed a great many horses, in good condition, going loack to their stables for the night. They are, it is said, very happy down in the pit ; so much so, that when during the Jubilee they were taken up for three days' holiday, there was the greatest difficulty in preventing them from retuming to the pit's mouth, at which men hat to he stationed to drive them back for fear they might try to put themsetves into the cages and so tumble down the shaft. Horses tery quickfy adapt themselves to circumstances; and 1 dare say the garish fight of day was painful to their eyes, and that they were amxious to return from the cold on the surface of the ground to the even temperature of $80^{\circ}$ in the pit.

Our walk was a long and weary one, and 1 feft thanktul when we approached the pit's mouth and could breathe cooler
and purer air. Our hosts were ansious that I shouh go a little further; but I could not do so, and sank down into a chair to rest. The others went on, as I thought, to see some other workings; but I afterwarks heard that they soon reached a beautifut room hollowed out of the solil coal, with sides tike ebony, and sparking with hack diamonds. The walls were decorated with arches and cleverly arranged geometrical pattems, formed of the fronds of rarious kinds of Adiantium, an inscription with cordial words of welcome being traced in the same delicate greenery. In the centre stood a talle with light refreshments of various kinds. The entertamment afforded the opportunity for speeches, in which the rapid development of the mining industry of this district was detailed in telling figures, and mutual sentiments of kindness were most cordially conveyed. At the pit's mouth crowds of women and children had assembled to see us, and a little further off a train was drawn up, filled ly ladies and gentlemen who had preferred to wander about park-tike glarles, while thirir more energetic friends had made the descent into the coal-mine. The united party-numbering, I should think, nearly one hundred--next proceeded on board the 'Sunbeam, for a very late five-o'clock tea and a hasty insfection of the vessel. At an early how I retired to rest, utterly wom out.

Irednesday, July zoth.-Contrary to my usual habhit of awaking between four and five o'clock, I was sound asleep when tea was brought at 5 A.m. ; and I should dearly have liked to have slept for two or thee hours longer, so completely was I exhausted by yesterday's hard work. But it couk not be; and after a cup of tea, and a little chat orer future plans, I set to work sorting papers, and putting names in books, to be given to our kind hosts of yesterday, in remembrance of our visit. At 7.15 we entered the Joat which was waiting alongside, and proceeded to the shore, Tom, as usual, putling
an oar. Poor 'Sir Roger,' who has been explosively bappy during the past two days at having us on board again, made a desperate effort to stow limself away in the boat, which, unhappily, could not be allowed on account of the quarantine regulations. It seems very hazd that the poor doggies can never hare a run on shore whilst we are in Anstralian waters. Their only chance of change and exercise consists in being sent in a boat to some ruarantine island for an hour or two.

Arrived at the landing-place, Mr. Gardner, to whom we were much indelsted for making our visit to Newcastle so very pleasant, was waiting to take us to the station. We started punctually at the time fixed, and passed through a dull but fertile-looking country, until we reached West Maitland, where I received a charming present of a basket of fragrant flowers. About twelve o'clock we were glad to have some lunch in the train. At Tamworth Mr. King met us with his little girl, who shyly offered me a large and lovely bouquet of violets.

From Tamworth the comtry became prettier and the scenery more momntainous. At one station there was quite a typical colonial landscape: park-like ground hearily wooded with lig gum-trees, and a winding river with a little weir, where one felt it might be quite possible to catch trout. The combtry continued to improve in beanty, and we saw on all sides eridences of its excellence from a squatter's point of view. At one place a herd of splendid cattle were being driven along the road hy a stockman, and we passed many large flocks of sheep. Alout eight Armadale was reached.

The line from Armadale to Tenterfield is the highest in Anstralia, and is considered a good piece of engineering work. It is in that respect a great contrast to the line over the Blue Momntains, where the engineers had a comparatively easy task in following the tracks of the old bullock-road.

The conntry round Tenterfield is something like the New Forest, with fine trees and a good many boggy bottoms.

Abont fourteen or fifteen miles from here the local 'Ben Lomond' rises to a lieight of 4,500 feet. In the clear starlight might we had occasional glimpses of its deep glens and rocky peaks.

Thurselay, July 2 Ist.-The train reached Tenterfield about one o'clock this morning, and we drove straight to the Commercial Hotel, where we found comfortahle rooms and blazing

Cattle crossing the Dirling River
fires. Everything looked clean and tidy, and a cold supper awaited belated trarellers, of whom there were many besides ourselves. I was awakened at 7.30 A.m ly the sun shining gloriously through the windows of my room. The air felt delightfully fresh, reminding one of a lovely spring morning in England about April. Soon after cleven came Mr. Walker,
of Tenterfield, who had kindly called to show us everything worth seeing in the tormship near his station. His is a large holding, even for Australia, 300 square miles in extent, and stretching fourteen miles in one direction and eighteen in another.

After lunch all the party except the children, who were out riding, started in two waggonettes for Tenterfield Station. The township of Tenterfield, like all new Australian towns, is laid out in square blocks, with corrugated iron honses, and various places of worship for different denominations. The riews of the comntry around are pleasing, and the land looks fairly fertile, and is well wooded, with distant mountains seen through purple haze. We first went to the settlement at the station, where we saw a good thoroughbred horse, 'Cultivator,' Who has done well in racing both at home and in the colonies; 'Lord Cleveland' (son of the 'Duke of Cleveland'), a good conch-horse with fair action, eighteen hands high ; and a little cart-horse with sloping sloulders, short bone between fetlock and linee, and square back like a thoroughbred shorthorm bull.

From the stables we went to look at the old store which in days gone by used to be sufficient for the needs of the whole neighbourhood for a hundred miles round. Then we proceeded to the wool-shed, built of corrugated iron, the rooden shed haring been burnt down. Mr. Walker has about 70,000 head of cattle usually, and from 50,000 to 100,000 sheep, but his stock is somewhat reduced this year on account of the long drought. He has 300 thoroughbred Berkshire pigs, besides some wonderful milch cows and a fine Jersey bull. The cows are much wihler here than they are at home, and Mr. Walker has a most ingenious contrivance for securing the animals for milking. They are driven through a large gate into a passage, which gets narrower and narrower until it reaches a point where the cow can be secured.

After looking at the station buildings we went into the house, a comfortalle cottage residence with a nice rerandah all round, and what must be a pretty garden in summer. Eren now it is full of violets, and some tine specimens of English trees-oaks, elms, limes, and pines. After tea we went for a second drive all round the township, and up some low hills to get a view of the town from a distance and of the mountains from a different point of tiew. Next we took a lew

Shedp crossing Ruper
photographs, and should have taken more had not the focus-sing-glass of the camera got lroken. Then we drove back into the town, and, I think, round almost every street, and saw all the public buildings, which are indeed creditable to such a new and rising tormship. We dined again at the table dhote, and after dinner Mr. and Mrs. Walker called with all sorts of stuffed birds and beasts and other curiosities, which they had kindly brought as a remembrance of our visit. They took off Mabelle to a concert, for which the superior of the convent had sent
to beg my patronage in the morning. I could not promise to be present, and was much startled during dimer to hear that old-fashioned English institution, the crier, going round with his bell and lustily amouncing that a concert 'was to be beld this erening under the patronage of Lady Brassey and the Honomrable two Miss Brasseys.' He kept walking up and down shouting this ont until the concert commenced, and when he disappeared the Salration Army appeared upon the scene with a brass band, the sounds of which are still ringing in my ears as I am trying to write this, preparatory to going to bed betimes to secure some rest belore an early start in the morning.

Friduy, July 22md.-This was evidently not to be a night of rest for me. Between one and two I was awakened by the first arrivals by the mail train. At three o'clock people began to get up and go array, and we could fully appreciate how Australian bnildings let in every sound. Between four and five the bugle sounded to call the gallant New South Wales Light Horse to parade. At five o'clock $I$ was called. It was a cold, bright morning, with a hard fiost, and as soon as my tire and lamps were lighted I got up and began preparing for the joumey. We heard much galloping of horses in the early morning, and soon gentlemen in scarlet uniforms began to appear from various parts. We waited until a quarter to seren, and then, as our proffered escort did not turn up, we had to go to the station withont it, for lear of missing the train. Fire gallant members of the troop joined as on the way. The commanding officer wore blue undress uniform, and the others were in scarlet. It was amusing, on our way to the station, to see late-comers galloping furiously along the road, and it needed a little judicious delay to enable the scattered troopers to collect themselres and form into line. At the station we met our old friends the Chinese Commissioners, looking rery curious in travelling-gowns orer their national costumes.

Off the 'Irack

In spite of the strict injunctions we had received to be punctual to seven o'clock, it was 7.15 before the train starter. We passed through a pretty lint larren country, and reached Warrangarra, on the frontier, in about three-quarters of an hour. There I saw the most extraortinary-looking coaches, dating, I should think, from the time of Queen Elizalieth, with enormons reflecting-lamps, which produced a curious effect in the day, but donbtless are useful for hosh-travelling at night. No sooner had we alighted from the train thanI camot say to my surprise, for familiar faces are always turning up in unexpected places-- the grandson of an old wheelwright at Catsficld came to speak to me, inquiring first after our family and then after his own lelongings at home.

I mas able to give him good news, and to tell him of the alterations going on at Normanhurst, where he had worked for a long time. He has been out here four years, and did very well until last year, when times became so bad; but things are looking up again, and he told me he had four months' certain work before him, and a very good chance of an opening in the new township as the railway approaches completion. He looks exceedingly welt, and says his wife and children also enjoy excellent health. He consulted me abont taking the advice of his relations and going home. I told him I thought it would be a great pity to do so at present. Working men in the colonies have a good time if they can only keep sober and are honest and industrions. Indeed those in the old comntry can scarcely form an idea of how superior the working man's condition is out here. Of course there are quite as many ne"er-do-weels here as in the old country, and I fear that the policy of the Government rather encourages this class, and that there is tronble in store in the near future. The so-called memployed are mostly atter loafers, who will not give a good day's work for a fair day's wage. They refuse to work for less than eight shillings a day, and many of them if offered work at that price only dawdle about for a few hours and do really nothing.

## CHAPTER XYI.

QUEENSLAND.

$\mathrm{A}^{\mathrm{T}}$T Warrangara Station we left the train and stepped throngh the rail fence which divides New South Walen from Queensland. A walk of about two hundred yards hrought us to the Queensland train, where we found a comfortable carriage prepared for our reception. The Chinese Commissioner's were in another carriage, and we proceeded as far as Stanthorpe, where they were met by a great many of their fellow-countrymen and carried off to see the extensive tin mines close to the township, where 600 Chinamen are employed. From Stanthorpe we went on climbing up till we reached Thulun1,ah, upwards of 3,000 feet abore the level of the sea. Thence we went on to Tharwick, which was reached about i2.40. Here a dear little boy appeared at the station and handed me a large and beautiful bunch of violets. It is rery pleasant to receive flowers from people whom I have never before seen, and who only know my books.

After learing Warwick we entered on the tract of comery known as the Darling Downs, and a splendid stretch of land it is, covered with magnificent stock, both sheep and cattle looking well even now after the long smmer dronght. How much better they will look in a few weeks' time when the new grass las liad time to grow can scarcely be imagined. The first station we passed throngh was one of the largest private stations on the downs; the next was called the Clifton Station, and belongs to a company. Edenvale Station could be seen in the distance; and on the opposite side stretched a large station belonging to Mr. Tyssen, whose landed estates are valued at five millions. This extensive table-land looks something like the prairies of Sonth America, only with more trees and fewer undulations. The occasional fires we met with on our way heightened the resemblance. On reaching Tarroomla, one of the largest and pleasantest torms in this neighbourhood, a lady came to the carriage door and gave me another bunch of riolets. The violets of Anstralia have more perfume than any we grow in England ; certainly they are more fragrant than those one gets on the Rivieria.

From Tawoomba the railway rapidly descends, dropping as much as 1,300 feet in ten miles. The scenery somewhat resembles that of the Blue Mountains, and is even more beantitul. The exquisite effects produced by the waning daylight lent a peculiar charm to this landscape. The forest close to ns looked dark and sombre, whilst the valley further off was bathed in sunlight, and in the dim distance the momtains over which we had passed early in the day faded into a delicions pale blue chiaroscuro. The banks beneath or above us were cleft by little gullies, with struggling rivulets, edged by delicate ferns and strange plants. The railway stations eren seemed prettier and more homelike than any we have yet seen in Anstralia. They were surounded by gardens, and quite overgrown with creepers. The line must have been expensive to
make, and evidently required great engineering ability. A more direct line could perhaps have been constructel which would have saved heary gradients and much rock-cutting.

Fern Forest

At Helidon Mrr. Laidly joined the train. He har been late for the train at Tawoomba and had ridden down to Helidon, the train taking one hour and a quarter to do the twelve miles. I was sorry to hear that he and his mother had
been summoned from Brisbane to see a brother who was some 400 miles off in the bush suffering terribly from theumatic lever. The sick man had been carried to a civilised place by some bushmen, who were mursing him day and night. I am happy to say he is now in a fair way to recovery. Mrs. Laidby is already a great supporter of the St. John Ambulance Association, and declares herself more than ever convinced of its utility.

I caught a severe cold on my arrival at Brisbane, and have been in bed for three days. I have therefore nothing to chromicle, and shall accordingly make use of Tom's diary for that time: -
'July 20th.-Returned on board the "Sumbeam," and cast off from the buoy, making sail for Brisbane with a fresh breeze from the north-west.
'July 21st-22nd. We continued under sail with variable winds and generally fine weather. The chicf features of the fine stretch of coast between Newcastle and Brisbane are the Boughton Islands, Cape Hawke, a densely wooded promontory rising to the height of soo fect, and the Solitary Islands, a defached group scattered over a space of 22 miles in a north and south direction, at a distance of four to six miles from the shore. A light is exhiljited from the south Solitary, and a signal estallishment is kept up. We communicated with this isolated port. An islet adjacent to the south Solitary Island is remarkable for a large natural arch, which the ceaseless breaking of the sea has opened through the rock.
'Passing north from the Solitaries we again closed with the coast at Cape Byron. The scenery is magnificent. The coast range attains to a great elevation. Nount Warning, the loftiest peak, rises to a height of 3,840 feet, and is visille fully sisty miles. It was our guiding mark in the navigation of the coast for a space of twenty-four hours. At Danger Point the
boundary line between Qucensland and New South Wales descends to the coast from the high summits of the Macpherson Range.
'July $23 r$ l.-At noon we were off the entrance to the narrow channel which divides Stradbroke Island from Moreton Island, tearing atong at twelve knots an hour, under lower canras onty, with a strong wind off the land and smooth water. It was a splendid bit of yachting. We passed a steamer which had come out with the Mayor and a farge party from Brishane to meet us. They welcomed us to Queensland with hearty cheers, to which we cordially responded. We stood in close under the land and followed the high coast of Moreton Island. Its northem extremity is a fresh, rerdure-clad, and well-wooded point of land, on which stands a lighthouse. On this sunny, breezy day the scenery of this fine coast was quite leantifut.

- Off the north end of Moreton Istand we took a pilot, and proceeding under steam arrired at io p.s. off Govermment House, Brislrane, a distance of 50 miles from Cape Moreton. The narigation from the bar of the river to Brisbane, a distance of 25 miles, is extremely intricate. Everything has been done which it is possible to do, loy teading tights at fiequent intervals, to assist the pilots; but we passed a steamer of the British India Company-which han entered the river an hour ahead of the 'Sunbeam'-aground on a bank, from which she was not floated until after a delay of two days.'

Mondry, July 25 th. -In the afternoon drove to 'One-tree Hitt,' a richly-wooded height, commanding a splendid view of Brisbane, and of the far-extending range of mountains running parallel with the coast. On our return to Government House the horses bolted, the carriage was smashed to pieces, one of the horses was fearfully injured, and we had a narrow escape from a fatal accident.

Tucslay, July 26th.-After a busy morning, went on
board the Queensland Govermment gunboat. The Governor, Mr. and Mrs. de Burgh Persse, and one or two others, came to lunch on board the 'Smbeam,' and I had an 'At home' afterwards.

Wedncsiday, July 27 th. -We all rose early and started by the 9.30 train, with the Governor, Sir Samuel Griffith, the Mayor, and a large party, for the first Agricultural Show ever held at Marburg. The train ran through a pretty comtry lor about an hour, to Ipswich, an important town, near which there is a breeding estallishment for first-class horses. On reaching the station we were received by a number of school children, who sang 'God save the Queen' and then presented Mabelle and me each with a lovely bouquet. After some little discussion over arrangements we were packed into various carriages and started off, the Governor's carriage of course leading the way. The horses of our carriage appeared somewhat erratic from the first, and soon we were nearly hronght to a standstill against the trunk of a large tree. Fortunalely the encalyptus has so soft a bark that it tore off, and we did not break anything. We shaved the next big tree in our road by a hair's-breadth, and then discovered that the reins were coupled in an extraordinary mamer. Having rectified this mistake, we proceeded on our way rejoicing ; but again we were on the point of colliding with a monarch of the forest, when one of our own sailors who was on the box of the carriage seized the reins and pulled the horses round. Tom remarked that it was rather stupid driving. The man who was driving (a German) said, 'Not at all, sir: the horses have never been in harness before.' When the other carriages came up we changed into a less pretenious vehicle, drawn by quieter horses.

- Marburg is an interesting German setilement, formed in the last twenty years. The settlers have, by the most laborious efforts, cut down the dense scrub with which this part of
the country was covered. Their frugality, their patience under many privations, and their industry have been rewarded. They grow maize, sugar, tobacco, and vegetalles, but their cattle seem to be the most thriving and successful part of their business. In some seasons want of water, and in every season the heary rainfall at the period when the grain is coming to maturity, are serious drawhacks to agriculture in this district. On the whole, it may be said that Queensland is far more adapted to be a pastoral than an agricultural comntry.'

Every house in the neat little settlement was decorated, and many trimmphal arches had been erected. An incident of a somewhat comic nature occmred at the Show. An address was being presented to the Governor ly a man on horseback, who dropped his reins to give more emphasis to his delivery, and his horse, finding itself free, begran to nillde the reins of the horses attached to the Govemor's carriane. A general scrimmage seemed imminent, of which the man on horseback took not the least notice. He went on reading the address with the most imperturbable comenance, until two Yolunteers rushed to the horses' heads and seprated them. The Show was duty opened by the Governor, and we waited to see some of the animals tried. Luncheon was served in a sort of half-house, half-tent, and some very good though short speeches were made. We drove back liy another road to Rosewood in order to enable us to see more of the scenery of this fine country.

But our adventures were not over for the day. In going down a steep hill our driver did not allow quite enough room, and canght the back of one of the long low German waggons which are used in this district. The hind wheels came off, and a woman and child who were seated in the waggon were thrown into the road shrieking and screaming. Fortunately they proved to be more frightened than hurt, and the waggon having been repaired and the child and its mother
comforted with pictures and sugar-plums which I happened to have with me, they went on their way, and we reached the station a few minutes late, but picked up our time belore getting back to Brisbane. Alter a hasty dinner I had to

German Waǵnon
be off to an Ambulance meeting kindly convened by the Mayor. Considering the short notice given, the meeting was a wonderful success. Tom, Lady Musgrave, and Mahelle went on to the Liedertafel Concert afterwards, and the rest of the party to the Jubilee Singers' entertaimment, both of which were excellent.

Thursthy, July 2Sth. - Was called early, and passed a very busy morning. At ten o'clock I went for a drive in Mr. Stevenson's drag to his house at Fernberg, from which there is a good view over Brisbane and its surroundings. Mïnie came with me, and the rest of the party rode in the same direction, but went further than we did. At twelve we received an address, very prettily decorated with seatread, firom
the Sailing Club of Brishane. We were to have embrard in the 'Smbeam' at hadf-past twelse, hor miontmately tro tubes of the boiler had hurst, and we had to wait for some time while they were being repaired. When we started the people assembled on the high banks checred us all the way down. But we were a good deal delayed ly the fanty tubes, and did not leare the mouth of the river till dusk. The scencry of the lank on each side is pleasing, and we all enjored the sail down.

Fritt!!, Imly 2gh. We sailed merrily all might and all to-day, with a fair fresh loeeze; but there was a considerable roll, and haring been on shore so long, we more or less felt the motion. I huring the night the question of stopling at Maryhorong was definitely settled, and we sailed oumside Sandy or Fraser Island instead of iwsile it. This prevented us from accepting the kind and hoppitable invitation of the Mayor and inhabitants of the tommaip. At noon we had mun 204 knots, and were able to shape one come more towards land, the water liecoming smoother with every knot we made. We salt Elliott Islam, where if it had heen calm it would have been rery nice to stop. It swarms with turtle and seabinds of every hind, which are reported to be perfectly tame, as the island is seldom risiterl. Cape Bustard was made later on, and we had a quieter evening; lout about io p.an. the faclat hegan to roll again heavily, the wind having shifted a little, ohliging us to alter our course.

Suturdry, Jut! 30 Ih.-At 5 A.m. we dropel anchor in Kepmel liay, hat had to wait for the tive to rise. The lamed in the course of the moming in the 'Glem,' the 'Flash,' and the 'Mote,' and made quite a large party, with dogs, monkey, and photographic apparatus. We found a convemient little landing-place, and looked orer the telegraph station and post-office, which are mainly managed by the wife of the signalman, Aird, an lionest Sootchman, who knew me from
my books, and was very mxious to give us a real hearty welcome to his comfortable little house. The first thing he offered us each was a tumbler of delicions new frothy milk, the

'Iurpentine Tree
greatest
possible
treat. After
sending off
a telegram or
two, and post-
ing some letters,
I was carried up,
to the lighthouse
where the custom-
house officer lives, and from which there is a fine view orer land and sea. Then the tide rose we returned on board, and alout half-past tro all the inhabitants of the station came on board to see the yacht of which they had read and heard so much, and which they were glad to see, as they said, 'with their own eyes.' At half-past three our visitors returned ashore, and we had to start up the river. A little higher up, the harbourmaster of Rockihampton met us, bringing many telegrams from various people in that town as well as in Brisbane, all sent with the olject of making our visit pleasant.

We arrived at Rockhampton at 9.30 p.x. The cold I caught at the last Ambulance meeting has been gradually increasing, and became so bad to-day that I was obliged to go to bed early and take strong measures to try and stop it; so that when the Mayor of Rockhampton came on board to welcome us I was not risible, nor did I sce the Naval

Volunteers who were waiting on the bank to receire Tom. It is rery pleasant to find how warmly he is welcomed everywhere as the originator and founder of the Naral Volumteer movement.

Sumluy, July 31 st.-I stayed on loard all day, so camnot describe Rockhampton from my orm linowledge of it. The others all went to church ; Mr. Ballard, Dr. and Mrs. Macdonald, and Mr. Thompson, the owner of the opal-mines at Springsure, came to lunch, the latter bringing some curions specimens from his quarries. We had service at six oclock, after which I was glad to go to rest.

Momduy, Aumust ist.-A busy morning, as usual, before starting. We left at roans. in three waggonettes (or fom-riheel buggies, as they are called here) for Mount Morgan, earh vehicle leing dramm by four horses. Our party occupied two of the waggonettes, and the sailors and luggage filled the third. After passing through the clean and tily town of Rocklampton, the streets of which, though wide, cannot he called picturesure, we entered on a long stretch of road. I never saw anything so gorgeous as the Thumbrgite renusta and Imumetincillea, now in full bloom, which hid most of the verandahs with a perfect curtain of rich orange and glorions pruple. 'The hospital is a fine building on the top of the hill; the grammar-school and several other good-sized public huidings give the whole place a well-to-do air. We crossed a bridge spaming an arm of a lagoon covered with a curious little red weed, out of which rose a splendid lotus lily, known as the Rockhampton Lily. The blossoms are hone, red, and white, and rear their graceful heads ahove the water in a conspicuous manner, growing sometimes as large as a headfast-sancer. It was a beautiful morning, and had I not lelt mentell with hronchitis, from which I have so long been suffering, I should have enjoyed the drive immensely. Alrout seren miles out we came to a large poultry farm, but I am afraid the venture had not
proved snccessinal, for the farm lowked neglected. Quite a little crowd lad assembled in the verandahs of the inn and adjoming store, and the people had hoisted at Union Jack in our honour.

Abont half-way up the hill we were glad to pull up at a creek to water the huses and sit in the shade. This was just before reaching the 'Crocodite' imn, where sereral coaches were waiting to change horses. Som afterwards we passed several mines, or rather reefs, with queer names, such as the 'IIit or Miss,' the 'Chander,' and the 'Hopeless,' arriving in due time at the Razor-Back Hill. It is indeed well named; for, steel as we had found the little pitches hitherto, this ascent was much more ahropt, and might well be likened to the side of a homse. Everybody was tmond out of the carriages except me, and even with the lightest buggies and four good strong horses, it seemed as if the leaders mnst tumble back into the carriage, so perpendicular was the ascent in some places. On one side of the roarl a deep precipice fell away, and when we passerl a calt or met a hearily daden diay coming down from the mincs we seened to go dangeronsly near the side. Altogether, the drive would not have been a pleasant one for nerrous penple. Bad and steep as the present road is, howerer, it cuts off a great piece of the liill, and is quite a Queen's Highway compared to the ofd road. Haring at last reached the summit of the hill and breather our panting horses, we went on throngh a bark-like country, more or less enclosed, which led to the Mome Morgan territory.

Here the most conspictons boilding is the hotel, erected by the company for the convenience of the many risitors to the works. Although not yet finisled, it is duite a pretty house, and will accommodate a large nmmber of guests. It stands close to a dam across the momatain stream which flows through the valley, and has for a foreground a refreshing
lake and bathing-place, formed by the arrested waters. We did not stop here, but crossed the creek and went up to the company's office, where we were warmly welcomed by the practical manager of the mines, Mr. Wesley Hall. The sun was now intensely hot, and it was quite a relief to retire into the shade. I felt very tired ; but as they had kindly harnessed two fiesh dranght horses into the baggy on purpose to take me to the top of the hill, I considered myself bound to go ; and off we started, passing enormous stacks of stone taken from the top ol the mountain. These blocks are said to be full of ore, but have been allowed to lie so long exposed to air and weather that many plants and creepers, and even some large shruls, are growing over them. As we climbed up the hills, which became steeper and steeper at each turn, we passed works and furnaces of every description, reaching at last a plateau, from which a fine view opened out beneath us.

The tormship of Mount Morgan nestles in a pretty valley, and is enclosed by round-topped hills, which are covered with trees. A mile or two further we reached the foot of the steepest hill of all, where the rest of the party found trucks waiting for them, worked by an endless rope, going up and down. Into one of these they soon packed themselves, and were speedily drawn to the top of the hill, while we climbed slowly, and indeed painfully, up by a pretty country road, eventually arriving at the shoot, at the bottom of which three drays were standing. Into these, lmmps of stone were being run as fast as possible, and when filled they were taken down to the works, to be quickly replaced loy empty retum drays. The stone looked exactly like old ironstone, but we were told that it was the richest native goll yet found, having been assayed as ligh as $99 \cdot 8$ per cent., and selling readily for $4 l .48$ an ounce. To this was added the assurance that half an ounce of gold per ton would pay all working ex-
penses. The blacksmith's forge stood a little further on, and then we came to a rery narrow woodland path, up which Tom and the sailors carried me in turns, as far as another platform on the hill. Here were soveral tronghs leading to the larger shoot we had seen helow, which kept it constantly fed, and also the openings of long fumels which had been pierced into the very heart of the momatains. These shafts were merely experimental, to make sure that the riclmess of the ore was not superticial, but extended to a depth of some two hundred feet beneath the ground on which we were standing. It was curious to hear these statements, and look at fhe surrounding country, which was perfectly free from the defacement of mining operations. The top of the mountain, on a part of which we were standing, had originally been of sugar-loaf form, but its extreme apex has been cut off, and quarrying operations are now going on tigoronsly. Tons of valuahle stone are daily raised to the surface, from which large quantities of gold can be extracted. One hast which took place while we stood there proved nearly fatal to both me and 'Sir Roger.' The stone turned out to be larder than the miners had anticipated, and the fragments blew further than they should have done. One piece missed poor 'Sir Roger's' paw hy an inch; and another whizzed past my head within two inches; while a smaller piece hit me on the shoukler with what the manager descrihed as a 'whacking somed,' making me feel quite faint for a few moments.

After strolling about picking up specimens, trying to learn from Mr. Wesley Hall to distinguish between good and bad stone, their differing rualities being to us novices extremely difficult to detect, we sat down quietly to enjoy the view and try to realise the truth of the monderful stories we had been hearing, which seemed more fit to furnish material for a fresh chapter of the 'Arabian Nights,' or to be embodied in an appendix to 'King Solomon's Nines,' than
to figure in a business report in this prosaic nineteenth century. Mabelle and I returned slowly to the hotel, which we found clean and comfortable. While I was lying on the sofa, waiting lor the others to arrive, a regular' smash-up' took place outside. Fire horses yoked in a timber-waggon (two and two abreast and one leading) were going down a steep bank into the creek below, when the timber suddenly lifted and came on the backs of the wheelers. The animals began kicking violently, getting their legs among the timber; it was extremely difficult to extricate them even with the help of a dozen powerful and willing hands, though everyone near lan to the assistance of the bewildered teamster, who seemed quite unable to cope with the emergency.

Presently an old man-a most picturesque individualpassed slowly by, surrounded by quite a pack of hounds, including lurchers, retrierers, and even curs, as well as some very good-looking, well-bred greyhounds and kangaroo-hounds. On inquiry I found that his business was to patrol the place all night, and prevent intruders coming to take away samples of Mount Morgan ore. The dogs are said to know their business thoroughly, and contrive to be a terror to the neighbourhood without seriously hurting anybody.

Australian up-country hotels are certainly not meant for rest. They are always either built of corrugated iron, which conveys erery sound, or of wood, which is equally resonant. As a rule the partitions of the romis do not reach to the top of the roof, so that the least noise can be heard from end to end of the building. There is always a door at one extremity, sometimes at both, besides a wide verandah, up and down which people stroll or lounge at pleasure. Exery landlady appear's to have half-a-dozen small children, who add their contribution to the day's noises in the shape of cries and shouts for 'mammy,' who, poor soul, is lar too busy to attend to them herself or to spare anyone else to do so.

Tucsday, Aupust $2 n d$.-The crushing-mills and the machinery have to be kept working all night, for of course the furnaces are never let ont; and before daybreak all the noises of the works began, so that we were up early, and after breakfast went to the chlorination works with Mr. Trinear, the assayer.

The first thing shown ms was the stone just as it came

from the drays we had watched at work yesterday. This was speedily crushed into powder, baked, and mixed with charcoal. It then passed through another process within the powerful furnaces, which separated the ore from the rock and poured it forth, literally in a stream, golden as the river Pactolus. I never saw anything more wonderful than this river of liquid gold. A little phial held to the month of one
of the taps became just a bottle of gold in solution. By adding hydrochlorate of iron the gold is precipitated in about seventy hours, and the water can be drained off pure as crystal, without a vestige of gold remaining in it. The gold itself is then mixed with borax, put through a further smelting-process, and ultimately comes out in solid nuggets, worth, according to the purity of the gold, from 300 . to 400 l . each. The chillien were very pleased at being able to hold 1,200 . in their hands. Mir. Trinear told me that as the metal comes from the furnaces mixed with charcoal they often oldain as much as 75 , and he had got as much as 86 , per cent. of gold.

The Mount Morgan Gold Mining Company possess probably the most productive gold-mine in the world. The discovery of the gold-bearing rock, of which the whole mass of Mount Morgan is composed, was made while searching for copper ore. The gold at Mount Morgan is obtained from a lode of decomposed iron pyrites, partly underlying a bed of quartz, and at rarious points cropping up to the surlace. The original discoverers of the ore, and the individuals who supplied the slender amount of capital with which the company commenced operations, have realised great fortunes.

At Mount Morgan the process known as chlorination has been developed on a larger scale than has elsewhere been attempted. It is described as follows :-
'The process of chlorination at Mount Morgan is a very interesting one, and would well repay a visit of inspection by any who are interested in the profitable and economic treatment of auriferons ores. The tailings, as they come from the battery or from the dry crusher, as the case may be, are first of all roasted in eight large furnaces, each with a capacity of putting through eight tons in twenty-four hours. The roasting of the ore in the first place is to free it from the waters of crystallisation and to burn all orgmic matter out of it. When it leares the finmaces, it is turned out to cool in a large space,
betreen the furnaces and the chlorinising barrels. When it has sufficiently cooled, it is taken on an inclined tramway to the hoppers comectel with the chlormation hareds, in which the gas is generated ly minghing chloride of lime with sulphuric acid. Water only is added, and the barels, which are perfectly air-tight, are kent revolving until the gold is

thoroughly chlorimated, or, to speak painly, put into a fluid state. Each barrel contains a charge of about a ton of ore, and it is possible to get through twelve charges in the twentyfour hours.

The period for which the barchs are mate to rownle averages one and a hatf homr. When this operation is over the contents of the barrels are dischargol into draining-rats, from
whence the water and the gold, put into a state of solution, are drained into charcoal filters below. Charcoal possesses such an affinity for the chlorine that the gold is rapidly deposited, and the charcoal is so laid in these V-shaped filters that the golden fluid passes through layers, gradually becoming finer towards the bottom, and thus practically all the gold that is dissolved lyy the chlorine gas in the barrels is caught in the charcoal. So effectual is the process that the refuse from the draining-tubs will not assay more than a pennyweight or a pennyweight and a hall to the ton, while the water which drains off from the charcoal filters is pumped back and goes through the process a second time. The contents of the charcoal filters are conveyed straight to the smelting-works. There the charcoal on which the gold has been precipitated is first roasted in furnaces, and the residuum smelted in the usual smelting-pots. After this it is run into ingots of the purest gold.
'Chlorination was originally attempted in the United States. It has been perfected at Mount Morgan. By the ordmary crushing and washing process one ounce to the ton would be extracted from the rock quarried at Momnt Morgan. By chlorination every particle of gold is extracted. The product sometimes reaches 17 oz . per ton. The average may be taken at 5 oz . Half an ounce would cover expenses.'

The day turned out lovely, and if my cough had not been so bad, I should hare enjoyed the drive down from Mount Morgan. The pitches were just as steep, but they were nearly all downhill, which made our progress seem quicker and pleasanter. The country looked very pretty; the ferns were quite lovely, and the lilies in full bloom. The pleasure of the drive was further marred by the dreadful odours arising from the decaying carcasses of mfortunate bullocks which had been left by the roadside to die from exhatastion. Happily, there were no such horrors at the pretty place where we paused to
bait our horses-the same at which we had stopped going up yesterday-and we arrived at the railway hotel at Rockhampton at 2.5 , and immediately went on board the 'Sunbeam.'

In spite of heary rain in the afternom a great many ladies came to see the yacht, and were followed later by the Naval Artillery Tolunteers, the Naval Brigale, and other visitors. At 6 p.ar. Tom went ashore, accompanied by the children, to review the Naval Brigade, with which he was well pleased. After a hasty dimer at seven, we all went to an Ambulance Nceting in the council-chamber of the townhali. The heat of the room seemed great on first entering it from the fresh air outside, and I thought I should have fainted before I reached my chair at the farthest end of the room. Presently, however, some doors trere opened, and matters improved. The meeting was very satisfactory, a committee leing appointed, and sereral doctors promising to lielp and give lectures, while many of the people present gave in their names as suluscribers. From the Ambulance Meeting we went straight on to the station, Where the servants had rigged $u^{p}$ very comfortable beds for Baby and me in one and for Mabelle and Münie in another railway-carriage, the gentlenen beins provided for in two others. We were soon in Jred, and at ten o'clock started for Emerald and Springsure. We should have been most comfortable but for the piercingly cold draughts. The moon shone brilliantly, and I could see from my cot the lightly wooded but flat pastures alternating with miles and miles of bush, with here and there a log hut or a tin house standing in its own little clearing, making an interesting picture as we flew through the district.

Weduestay, Angust 3rl.-There was still a bright moon, and as we approaclied Emerald the comtry, seen ly its light, looked most picturesque. At Emerald, the rail to Springsure branches off from the main line to Barceldine. In the early
morning, as we were passing Fernlee, where the Govermment line ends, our servants produced some welcome tea. From there we ran on to Springsure, where our arrival caused great excitement, for it was really the opening of the line, ours being the first passenger train to arrive at the township. By about half-past eight we were all dressed, and went to a comfortable inn, some on foot and some in waggonettes, where we breakfasted.

After watching experiments with radious horses, to see which were best and quietest, we started in a couple of buggies for the opal-mines, or rather opal-fields, of Springsure. We had not driven far when we came to a fence right across the high road, and had to go some way round orer rough ground and across a creek to avoid it. This did not excite any astomishment in the mind of the gentleman who drove us, and he seemed to think it was a casual alteration owing to the new line; lout on a dark night the mexpected obstruction might prove incontenient. When the top of the hill where the opals are to Je found was reached, we all got out and set to work to pick up large and heavy stoncs with traces of opals in them, as well as some fragments of pumicestone with the same glittering indications. We were shown the remmants of a rock which had been blown up with dynamite to get at a magnificent opal firmly imbedded in it. The experiment resulted in rock, opal, and all being blown into fiagments, and nothing more has ever been seen of the precions stone. Our search not proving rery successiul, we proceeded to the large sheep-station of Rainworth. This fine property origmally belonged to Mr. Bolitho, and I was told that it then consisted of 300 square miles of country thoroughly well stocked, with excellent luildings, and-what is to be most ralued in this dry and thirsty land-a ruming stream, which had nerer been hown to be empoty, even in a ten years drought. The question of water becomes a serious considera-
tion out here, where every full-grown heast is supposer to drink and waste ten gallons of water a day. The drive to the station was very pleasaut. We passed a racecourse, where a little race-mecting was going on. It looked a rery simple affair, and we were told that once a year all the sporting population in what Anstralims call 'the neighlourhood,' extending for some hundred miles around, assemble hore to try their nags against one another.

We seem rather unlucky about accidents, for on our way down a steep hill the horses suddenly hecame restive; and if it had not been that our driver sent them spiming down one hill at full gallop, and up the next, thas learing them no time for kicking, and presenting the carriage from ever tonching them, we should probalily have had a repedition of onm smash the other day. We did not see a single kandaron all the may, but passed a number of good-lonking catile and horses. Years ago this country swarmed with game, and was so eaten up that the gromm looked as lare as som hand, the pasture lieing undistinguishable from the roads. Jy a strenwous effort the settlers hilled 30,000 kangaroos on a comparatively small area on the Ekove Jowns, the aljoining station to this, and thonsands more died at the fence, which was gradually pushed forwarl, in onder to enclose the sheep and keep out the marsupials.

By-and-ly we arriced at a smart white gate in the fence, which a nice little boy dresser in sailor costrume, who had accompanied us from Springsure, openerl for us. These paddocks held some merino sheep. Some fine timber had been left, so that the station looked mome like an English gentleman's estate than any phace we have ret risitert. Tre jolted Wearily over huge boulders and great slabs of rock, and went up and down tremendonsly steep pitches in the roads, until at last we arrived at Rainsworth, where we received the warmest welcome from Mr. and Mrs. Todhunter. After luwheon I
stayed in the verandah and rested, whilst the rest of the party went out to look romnd the station and the opalfields.

The view from the verandah of the house up to the Rainsworth mountain was remarkable, its most conspicuons feature being the peculiar-shaped hill, 1,500 feet high, with its top cut off, leaving a table-land, where what is called opal-glass is found. This sulbstance resembles opal in its consistency, except that it is white and transparent and does not possess prismatic colours like imprisoned rainlows. Before we left, Mrs. Todhunter kindly gave me some curious specimens of limestone, stalactites, and stalagmites, picked up on the surface of the black soil in the neighbourhood, besides two very curious little iron balls, joined together like a natural dumb-bell. We left in good time, and had an meventful drive home. I felt curious to know the value of this fine station, and was told it was 40,000'. This, certainly, if correct, does not seem high for an extra-good station with a comfortable house on it, basides stables, farm-buildings of every possible lind, a wellstocked though rather neglected garden and orchard, a large wool-shed some ten miles off, and a practically inexhanstible supply of water. Besides all this, there are plenty of wellfenced paddocks, containing 30,000 sheep, 200 bullocks, and some horses ; also drays and carts, and other farming implements.

On reaching Springsure we found some excitement prevailing on account of a mob of a thonsand cattle having passed near the town. These mobs of cattle are obliged hy law to travel six miles a day at least, unless they have cows and young calves with them, when the compulsory distance is less. They feed all the way on their neighbours' ground, so to speak, and travel many thousands of miles, occurying months on the journey. A clever stockman loses very few beasts on the way, and such men command high wages. They often
undertake the journey at their own risk, and are paid onty for the number of cattle actually defivered. I was, as usual, too tired to go out again, but the rest of the party set off to see the cattle-camp, and had a long walk orer a rough road; but they declared the sight mell rewarded them for their trouble. The cattle were prepaxing to settle down for the night; whilst the camp-fires were just being lit, and he-

upon the scene. It was so tempting to remain out that the sightseers were rather late for dinner; after which we took up our otd quarters in the railway carriages, and started on our homerrard journey. This proved much more comfortable than the outward trip, for the raitway officials had kindly stopped nearly afl the dranghts.

Th.nisclay, August $4^{\text {th }}$.-I a wroke about five, and was at once struck by the strange appearance of the moon, which
did not look so big as usual, and had assumed a curious shape. I gazed at her in a lazy, sleepy way for some time, until it suddenly occurred to me that an ectipse was taking place, whereupon I roused myself and got my glasses. I was very glad not to have missed this, to me, always most interesting sight, especially as I had not the slightest idea that an eclipse would occur this morning. The atmosphere was marvellously clear, and I saw it to absolute perfection.

We reached Rockhampton about 6 A.m., and were put into a quiet siding till eight, by which time we had dressed and were ready to go and breakfast at the comfortable railway hotel. There was just time for a satisfactory talk about arrangements for future movements before eleven o'clock, when the Mayor arrived to take us, in quite a procession of buggies, to the hospital. Here Doctor Macdonald met us, and I was put into a chair and carried through the various wards of an excellently plamed and perfectly ventilated building. Everything looked scrupulously clean, and the patients appeared happy and well cared for. Several instances were pointed out to me ly Doctor Macdonald in which the St. John Ambulance would have been of great use. I heard of one case of a man who had come down 200 miles witl a broken leg, no attempt having been made to bandage it up. The poor fellow arrived, as may easily be imagined, with the edges of the bone all ground to powder and the tissues surrounding it much destroyed. Then there was another case of an arm broken in the bush, and the poor man lying all night in great agony ; and again of another stockman who crushed his linee against a tree while riding an unbroken horse. The instances are too numerous to mention where the knowledge of how to make the best of the arailable means of relief and transport would have saved much needless suffering. There were some good rooms for conralescent patients, besides paying wards.

Everything looked loight, cheerful, and sumy except the ophthahmic wards, which, if I may use such an expression, displayed an agreeable gloom. Here, all was painted dark green, and the sristem of rentilation seemed quite perfect, for air without light was admitted and the temperature equalised, this being an important factor in had cases. Ophthalmia appears to be quite a curse in Australia, as we hare already found to our cost, through Tom's suffering from it. There were nice shady verandahs to this part of the hospital, and comfortable chairs for the patients to sit and lounge in, besides a pretty garden. Not far off, in the compound, stood the rarious quarters for the nurses and servants, and the dead-house, and dissecting-room, with other necessary though painful adjuncts to a hospital. The doctor's cheerful bungalow, also near, was surrounded by a pretty garden.

A rough drive over a bad road took us to the Botanical Gardens, which are enclosed by the most charming fence I have ever seen: or rather ly a fence made heantiful by the luxuriant creepers growing orer it. A mass of the brilliant blossoms of the orange Thubergia comusta, puple Boutaincilleas, and ivory-white Bamamtia extended from end to end and sile to side. This fence encircled a lavish growth of palms of all kinds and shapes and sorts and sizes, and wany other tropical phants, which quite orershadowed the common European shrubs. These seem to flourish to perfection in winter here, and include verbenas of all colours, and unusual size and brilliancy ; a great profusion of phloses, the Phlox Drummomdi being a perfect weed, and scenting the whole air. These taller flotvers were intermixed with mignonette, musk, and many dear old home farourites; while all one side of the garden was taken up by a bush-house full of splendid palms. Ferns, various Als'plites, Lycopodium scombens, V'umilles, Hogus, flomished in great variety. Pink and red Bouguincillcus were growing on standards ontside, among the orange-
trees, and beyond lay lagoons covered with the far-famed blue, red, and pink lotus-lilies of Rockihampton.

The sun became rery hot, and I was glad to be carried back to the carriage and to drive straight to the boat, and so on board the Jacht to rest, while the remainder of the party went shopping in the town. In the afternoon we all went in the steam-launch to see the Creek Meat Canning Factory-a concern which has lately changed hands, and holds some of the largest contracts
 in the world for supplying armies and navies with timned meat. The quality is excellent. Mr. Bertram, the manager, met us at the pier, at which we had considerable difficulty in landing, for the tide was low. After a little time and trouble we managed to reach the shore, and went through the works, which are most interesting. The manufactory stands on the bank of the river close to a pretty lake embosomed amongst liills, and surrounded witl paddocks, where the cattle rest after being driven in from distant stations.

We were all sale on board the yacht by 9 p.m., and at ten o'clock the anchor was weighed. The night was fine, and we only stopped at intervals to allow the pilot to reconnoitre, or to wait lor a rise of tide. This is a most curious river, and might well be made the scene of a romance by some poetical person. It is only every ten or twelve days that craft drawing over ten feet can get up or down the river, and then only by the light of the moon. By day no large vessel can reach Rockhampton.

## CHAPTER XVII.

> THE EAST COAST.

Friday, August 5 th. -At I. 30 a.m. we anchored off Johmstone Point, and at So'clock we hove anchor and proceeded to the mouth of the Fitzroy Piver. The pilot left us at 10.30, and we proceeded out to sea muder sail. There was a strong wind from the south-east, and I was glad to stay in bed all day. We passed through the Cumberland Isles, and Tom had a rather anxious night, as the narigation was very intricate.

Suturday, August 6th.-The morming broke clear and fine, the fresh breeze still continuing. The scenery during the day was lovely, and I was carried into the deck-house in
order that I might enjoy it. The views were more like the Inland Sea of Japan than the tropical scenery, made up of cocoanat palms, tree-ferns, and coral islands, which I had been looking for. The mountain shapes were very beautiful, as were also the bays and inlets, and the varied colours of the land, sea, and sky gave brilliancy and effect to the landscape. The east coast of Australia at this season of the year is a perfect crusing-ground for yachtsmen. The Great Barrier reef, extending for a distance of $\mathbf{1 , 0 0 0}$ miles from Swain Reefs to Cape Yorke, protects the coast from the heary swell of the Pacific. The steady hreezes from the southeast are tarourable for sailing, especially in the direction in which we are steering.

At 4 r.m. we were off Pine Island, a small islet of the Percy group, on which a light has been established. From Pine Island onwards to the Whitsunday Passage the narigation recalls the experiences of many pleasant summers on the west coast of Scotland. The inner route, which we followed, passes between numberless rocks and islands. The Percy Isles form a distinct group, extending trenty miles from north to south, and eight miles from east to west. To the westward of the Percy Isles a still larger group has received the collective name of Northumberland, the several islands being distinguished by familiar Northumbrian names. Adrancing northwards, at a distance of some sixty miles from the Percy group, the Cumberland, Sir James Smith, and Whitsunday groups form a continuous archipelago on the eastern side of the passage. The highest peaks attain an eleration little short of 1,000 feet. The islands are for the most part richly wooded. Some peaks are clothed with timbers to the summit, others are smooth and grassy, a few are bare of regetation. The rocks are magnificent. Paternoster rises sheer from the water to a height of more than 900 feel.

- Turning from the sea to the mainland, the coast-range
at a short distance inkand forms a continnous barrier, varying in height from 3,000 to upwards of 4,000 feet. At Whitsmaday lassage, through which we passed on the afternoon of Angust 6th, the line of coast is broken ly Cape Conway, which, at its south-eastern extromity, rises to a height of 1,637 feet. A chain of peaks extends northwards from Cape Conway to Mount Drysander, and forms a tine amphitheatre of hills on the western side of the Whitsmatay Passage. On the eastern side is a group of islands, of which Whitsunday, the largest, is eleven miles long, while Whitsunday Passage is twenty miles in lengtl. At its narrowest part it is contracted to a loreadth of tro miles. On the mainkond side the passage opens out into the fine natural harbour of Porte Molle. On the eastern side the line of shore is hroken loy the lays of Whitsunday Island, and the channels which divide it from the smaller islands, by which it is completely surrounded.'

Cape Gloncester was reached in about three hours after we had issted from the Whitsunday Passage. Tomnding the cape, we anchored for the night close under the land.

Sunduy, dugust gth. - The morning damen clear and bright, and we sent off two men in the dinghy to land on Gloncester Ishand. They took the dogs for a rm ashore, amd I asked them to collect what they coutd in the way of shells or greenery. They did not bring back much of either, bat reported that the island was very pretty and hat a nice sandy shore, with forests running down almost to the water's edre, and quantities of parrots and parrakeets. We had church at hall-past ten, and directly after service went across to Bowen, ancloring a short distance from H.M.s. 'Palma.' Bowen is a small town, but the harbour is spacious. The sea was rather rough, and we Jound some difficulty in communicating with the shore ; but after lunch all the party landed in the large cutter. I was sorry to hear that Bowen is rapidly dwinding and losing its triule; the inhabitants hope, however,
to recorer some of their former vitality when once the network of railways is extended to their little town. Later on the officers of the 'Paluma' came on board, and seemed pleased to meet people lately from Europe; for they have been on this station several years, surreying the Barrier Reel. Our own shore party returned late, hasing much enjoyed their expedition and the long walk. They had picked up a good many curiosities, including one of the largest and finest hawksbillturtle shells I had ever beheld. It had been most carcfully polished by a lighthouse-keeper on one of the reefs, who had canght the creature himself. A great many telegrams were received this evening, all referring to the various lind arrangements proposed for us at 'Townsville and elsewhere.

Monday, August Sth.-Weighed anchor at daybreak, and were pushed merrily formard ly strong S.E. breezes. We sailed swiftly up the coast as far as Townsville-a prettylooking town of foreign appearance, with its wharres and husi-ness-houses close down on the beach, whilst the villas and private residences stand on the little nooks and comers of a hill at the back. The officers of H.M.S. 'Myrmidon,' which was lying in harbour, soon came on board to see us. They had broken their rudder-head outside the Barrier Reef, where they too were hard at work surveying, and had come into Townsville for repairs. The anchorage proved rolly, there being no protection whatever, and I had rather an uncomfortable night.

Tupsitay, August gth.-At daybreak Tom moved the yaclat out to the shelter of Magnetic lsland, where the coal-hulks lie, some six miles off Townsville. There we kept boxing about all the morning, moder the mistaken idea that it was quite smooth. Meanwhile some supplies were taken on board; but as I was not well cnough to undertake the long expeditions which had been planned, and the rest of the party declared that it would not be possible to go without me, they were

given up. After landing and taking a walk through Tommstille, the shoregoing people pronounted it to be quite as clean-lookinsin and prosperons as Bowen, lut with more business going on. The town, which has a population of 12,000, is louilt on a tomgle of land lietween the sea and lioss Creek. It consists of one main street contaminer banks, public offices, countinghouses, and well-sup)plied stores and shops. The bustle in the streets and the flomrishing and prosprerous appearance everywhere were quite chcering. Tomnsrille owes its prosperity to its railway, which is already opened to a distance of two hundred miles into the interior, and which has made it the prot for a wide area of pastoral country and for several promising gold-fields.

The bay of Tomnswille is open, and the shoal water extends some two miles from the beach. A breakwater is in course of construction, and dredging operations are being prosecuted with energry, so that the defects of the port will in course of time le remedied. We started with the same strong tradewind up the coast, passing through some pretty picturesque
islands and roads, hoping to anchor at Dungeness for the night. Finding it impossible to get up there betore dark, we anchored in Challenger Bay, mnder shelter of Palm Island, shortly after sumset. Soon after we had dropped anchor aboriginal blacks were reported alongside, and on going on deck I saw two miserable-looking objects in the frailest of boats. Indeed the craft looked like the pictures of an ancient British coracle, and was so light and unseaworthy that every wave wasled into it. They had nothing for sale except some commonplace and evil-smelling shells, which they were anxious to excluange for tobacco and biscuits, evidently preferring these commodities to money. We bought all the shells they had, and they were so well satisfied with their bargain that they retmon later on with another bucketful of conchological emiosities, which were also purchased. They looked most harmless individuals; but having been warmed by Captain Bridge never to trust the natives here, we thonght it better to set a donhle watch for the night, more as a matter of precaution than from any fear of actual danger. Though they may hare the reputation of being friendly, and may be certified as such in books of sailing directions, and on the Admiralty charts, one can never feel sure of their disposition. A trifling erent may have occured since the last report was made which would alter the disposition of the whole tribe towards Europeans. Some ollicers may have landed to shoot, and walked over the crops of the natives withont apologising or offering them remuneration, not knowing that they had done anything wrong. Drumken sailors may have landed, and so changed the friendly attitude of the inhabitants to deadly emmity towards the next arivals. I lonestly believe that a great many of the reported outrages in the Sontli Sea and other savage islands are due more to a temporary misunderstanding between blacks and whites than to any cold-blooded barbarity or love of bloodshed on the part of the natives.

Wednestay，Au！ust roth－－Some of the party went early ashore，and I need scarcely say they were not molested in the slightest degree，and only fomm a most larmess black camp of about trenty individuals，with gins musing their babies and men walking ahout．They brought off a good col－ lection of pectens，clams，helmets，conchs，peal－oysters，and large corries，but the specimens wore not very perfert．Also

Queenslatul 1．：い1なの
a quantity of greenery in the slape of l＇ancutimus，Lemprimm scombens，climbing $L!/ f$ ropentimm，and a corious sort of fruit off a palm，which grows in large cone－shaped chasters．Thery call it breadfruit in these parts，and the natives eat it ；but it certainly does not look either inviting or eatable．One fruit weighed trelve，and the other over eleven，pounds．

Two more natives came alongside this mornins．They hat
not the slightest vestige of clothing ; but two men, whom I sam over the side later in the day, both sported hats, and one of them had on besiles a man-of-twar shint ; the other wore a rery slort tmic cut low in the neck and several rows of canary-coloured glass beads. We weighed at eleven, and proceeded towards Dungeness minder sail. I was carried up into the deck-honse to see the view, which was provokingly obsomed liy mists and driving rain. We found some difficnlty in naking our way, owing to the new buoys not laving yet been entered on the Admiralty chart. Fortunately, the officers of the ' Myrmidon' had warned Tom of this fact, made more dangerous by the thick mist and fog. We ultimately arrived at Dongeness in safety, taking overyhody ly surprise, as no ship had ever lieen known to go throngh the southern entrance of Hinchinhrook Channel before withont a pilot. The pilot, a nice old man, had heen looking for us all day yesterday, as well as all last night. As we did not appear, he must have gone home, thereby losing the pleasure of conducting us into the harbour, but giving Tom the gratification of bringing the vessel in throngh the chanmel withont taking a pilot.
 Mr. des Graz had already started on their shooting expedition, and at noon we also set forth on an excursion up the Herbert River. Tom had cansed a comfortalle bed to be rigged up for me in the gig, so that I was not obliged to dress, but simply got out of one hed into another. The gig was towed by the steam-lamel, which also trailed the 'Flash' behind in case we might want to hand in any shallow phace or get agromm on a sand on mud bank. After the first little fluster of moving was over it was a great pleasure to me to be once more in the open air after being shot up for what seems so long a time. It felt delicionsly warm too, the temperature being $74^{\circ}$. The scenery was beantifnlsandy shores, green woods with high precipitous mountains
in the hackground, covered with shiny slate-hike shate, which when moist shows up like a mirror through the mist. The riew so reminded me of Scothand that I felt inclined to take up my glasses to fook for deer among the craggy peaks and corries. TVe passed the little pilot station of Dungeness, and almost directly afterwards the hamlet of the same name. It

Cardmell School-house
bears some resemblance to its English namesake, for it is situated on a sandy spit of land, surrounded by mangrove swamps instead of grass marshes. I noticed, too, that the people hare the ferer-stricken fook which is sometimes seen about Lydd and that part of the country. There are only fiftysix inhabitants, men, women, and children. Dufl as the surroundings seemed, it is wonderful how bright and cheerful the
people who came on board yesterday seemed to be. The river, though wider, put us very much in mind of the Kuching, in Borneo-the same tropical regetation and miles of unhealthylooking mangrove stramps. We passed several tidy-looking little settlements on the banks, some picturesquely built of wood thatched with sugar-cane or palm-leaf, while others were constructed of corragated iron, which must be frightfully lont in summer. The white people, so far as we could judge, as we passed up and down the river, were suffering from the climate. The Kanakas and Chinamen seemed more prosperous; and the few ahoriginals looked quite happy in their natural surroundings.

The servants, with their usual ingenuity, managed to loth cook and serve an excellent lunch, in the boat, with only the assistance of the 'Darly and Joan' stove. About half-past two we reached the wharf of the Halifax sugar-plantation, where our arrival disturled a large party of aboriginals, women and children, who were enjoying their alternoon bath, splashing, jumping like a shoal of fish. Our party (including the dogs) landed, and on their return said that the crop of sugar looked very healthy, and the rolling and crushing stock of the cane was in excellent order. The whole district is well adapted for the cultivation of sugar. No less than 9,600 tons were produced in 1886. The growth is steadily increasing, and the country will sooner or later become the centre of a large and prosperous trade.

For the cultivation of sugar on the Herbert both British and coloured labour is employed-British workmen in the mills, the coloured people in cutting the cane. Wages for Englishmen range from twenty-five shillings upwards weekly. We spoke to some of the wives of the workmen, several of whom are recent arrivals from Lancashire. Their dwellings are of the simplest description, made of corrugated iron or of straw, and scattered at haphazard in a clearing in the jungle or on
the banks of the river. These pioneers of cultivation lave to lead a hard life and bear many privations-circumstances in which the colonising qualities of the Anglo-Sixon race always come to the front.

There was an hotel and a store, and, as is usual in this sort of place, enormons piles of broken bottles and empty cases of timed meats, jams, \&e. It breaks my heart to see the colonists, particularly the children, living on condensed milk, tinned meats, and camed fruits from America, when there is so much good pasture ruming to waste all round the house. In the orchards the trees are literally broken down from the weight of their crop, while quantities of fruit which the houghs camot support are given to the pigs and cattle.

We had to wait a little before starting on our homewarl water-mar, for the tubes of the 'Trap's' hoiler began to leak, and had to lee repaired. This delay gave us an ofportunity of observing some of the inhalitants, who came to the pier to see us. They looked suart and clean and well-to-do-fuile different from those we had noticed as we ascended the river. We stopped to take one or tro photographs of tropical scenery and of varions little stations on the way down the river. We also pansed to look at the body of a dead alligator which had been canght in a snag. He was between five and seven feet long, and a second rather larger one lay close by. From time to time we caught sight of parties of blacks hidden amongst the rank regetation of the shores, and we saw some heautiful birds, particularly a brilliant bhe kingfisher, flashing about like a jerrel in the sunlight. There was another pretty little red-beaked bird; and an enormous black crane, about four feet high, with white tips to his wings, and a red and blue topknot, stalked about among the lotus-lilies. One part of the river banks was covered ly a dense growth of pancratium lilies, scenting the whole air; while elsewhere a tangled curtain of pink and riolet ipomcea hung down from tall trees.

I may mention that the currents in the river are very strong, and that we had several tropical showers in the course of the day. Although I enjoyed my outing, I was thankful to get on board again and lie down on my bed. Mr. and Mrs. Wardlaw came off later on, and brought me some orchids and a telegram from Mr. Pemnefather pressing us to stay till to-morrow,
tion the maids gave them of the wonders on shore that they promptty took off their father and two other gentlemen in the steam-launch to search for curiosities, hoping to be fortunate enough to find some shells as beautiful and uncommon as those the servants had bronght back with them.

Friday, August 12 th. - An hour after milnight the sportsmen returned, and Mr. Pemefather cane to breakfast. He was much disappointed that the party coutd not stay for another day's shooting, and talked of the variety of game to be had-geese, ducks, widgeon, teal, coot, plover, quail, swans, turkeys, and bitterns, to say nothing of cockatoos, parrots, wallabys, kangaroos, ant alligators. Yesterday the enginedriver, being a sportsman himself, kindty stoped the train and allowed them to have a shot, or rather several. They succeeded in kitting one poor lady wallaby with a dear little baly in her pouch, which did not seem very young, and would therefore have been easy to rear ; but, unfortunatety, they did not take possession of it and bring it on loard for a pet, to add to the tittle flock already brought up liy hand. Wattalys are quite easy to tame when caught as young as this tittle creature, and are very gentle and affectionate. Arrised at the factory, the shooting-party liad lunctr with Mr. Pemefather, and then went out with their guns, lut only succeeded in bagging a bandicoot, two ducks, a widgeon, a plover, and a tew other birds, making altogether a somewhat nondescript hag.

Precisely at 9.30 we started minder steam through the Rockingham Channel, which separates Hinchimbrook, an istand of magnificent mountains, from the mainland. We are now well in the doldrums of the Tropic of Capricorn, and the delicious fair strong trade-breezes we have hitherto enjoyed have now deserted ns, or rather we have sailed through them. I do not think I erer saw anything finer than this Rockingham Channel. The mountains on the mainland are high, and of beautiful shapes, with points and rounded outlines,
covered with green foliage, whilst on the inner shore of the island of Hinchinbrook there is a dense mass of tropical foliage clothing the hills up to their lighest tops. Where the scrub has been burnt, little patches of ferns of a fresh light green colour have sprung up, and the leafy mass is broken liere and there by a perpendicular rock or a white lace-like cascade. Erery bay and little inlet has its own peculiar charm, and occasionally a sharp spit of rock is thrust out into the sea. The water to-day is as placid as it can possibly be, and reflects on its surface as in a mirror all the beauties of the scenery. About twelve o'clock we reached Cardwell, a collection of little tin houses, looking from the ship as if they stood amid widely separated fields and orchards. All the party but the Doctor and myself went on shore to see the place. The people were all very kind, and our party were entertained at the house of Mr. Walsh, the principal Government official; and afterwards the chairman of the Local Board, on belalf of the inhabitants, read and presented a neatly worded address to Tom, who made a suitable reply. The party then returned on board, laden with orcliids, cocoanuts, and everything the tornship produces. The few settlers were most hospitable, and expressed great pleasure at seeing us. Whilst Tom and the others were taking their ramble at Cardwell, Mr. Walsh came off to pay me a little visit ; but directly the shore party returned on board, at 2.30, we resumed our royage under steam towards Mourillyan. The channel was still lovely, with islands on one side and the high mountains of the mainland on the other. I do not know when we have had such a charming sail, and there was a certain appropriateness in the surroundings on this i2th of Angust. The general contour of the hills, the purple colouring of the mountains, the Norfolk pines and other trees on some distant heights (when you were not near enough to see how tropical was the foliage) reminded me vividly of Scotland. What a pleasure
lovely scenery is! and what a delight to be able to travel and see it! I do not think I have ever forgotten or shall forget a single really beautiful riew I have ever seen and admired. Those scenes are all clear and distinct, put away in little pigeon-holes of memory. If my brain were only a photographic camera, I could print them off as clearly on paper to-day as in the long bygone years when I first saw them. All the incidents and circumstances are still fresh in my recollection.

For the last few days the scencry has been an especial pleasure to me, laid up as I am in the cleck-house, where a comfortable bed has been arranged for me, so high that I can look out of the wiodow and have my eyes delighted and my nerves soothed. I am rery thankful that I can thus enjoy the lovely coast, though I should much prefer lueing able to take a more active part in the sight-seeing, orchid- and shell-collecting, and general scrambling which ensues every day when the rest of the party go for their pleasant walks on shore along sandy beaches shaded by graceful palms, with tree ferns growing almost to the water's elge. It is forturate, perhais, that this constant malarial fever has made me feel too weak to care much about anything, so that I am not tempted to long to do imprudent things. I was indeed sorry when the shades of erening began to fall and prerented my seeing anything beyond the mere outlines of the coast.

The distance to Mourillyan is only forty miles, and the entrance to the harbour is extremely fine, though it was so dark that we could hardly distinguish anything. Soon after we entered the harhour and dropped anchor, Mr. Levinge, the manager of three large sugnr-estates in the neighbowhood, came on board, full of plans of pleasure fur the morrow. Unfortunately the programme which had been arranged was rather more than I could undertake. I may be alle to manage the eight miles in a steam-tram through the jungle, to see the

sugar-plantation, crush-ing-mills, and lunch with the manager and hospitable proprietor of the plantation ; but I fear I shall not have strength or time to go on to the Gundy Plantation, some miles off, up a lranch of the Johnstone River, and see the scenery there, which is said to be very fine. The original idea was to go on in boats to Geraldton, close to the month of the Jolmstone River, where the yacht or a steam-launch was to meet us and take us lack to Mourillyan Harbour, about eight miles off. We left it till the morning to decide what we should do, and went to bed in good time so as to be ready for an early start if I felt strong enough to attempt it.

Suturday, Au!pust 13 . - Woke just at dayhreak. When I looked throngh the porthole I found that this harbour of Mourillyan where we
were lying was one of the most picturesque I had ever seen. It is entirely land-locked, except for the narrow passage through which we entered last night. Both regetation and landscape looked thoroughly tropical, and two or three bungalows were perched amid the dense foliage on the steep banks of the rising hillsides.

We were ready before our kind losts, and it was quite eleren o'clock before we landed and estahlished ourselves in the steam-tram, ready for a journey to the Mourillyan sugarplantation. My long deck-chair having been placed most comfortably in a sugar-truck, my journey was lusurionsly and easily performed, though, alter the perfectly quiet, smooth movement of the last ferr days, I rather felt the occasional jolts and jars. I have travelled through tropical jungles in all parts of the world, and though the scenery to-day was manting in the grandeur of the virgin forests of Brazil, and of the tangled masses of regetation of Borneo and the Straits Settlements, it had much special beanty of its orm. The variety of foliage was a striking contrast to the monotonous rerdure often seen in Australia. Some of the palms and ferns were extremely beantiful, and so well grown that each might have been a specimen plant in a greenhouse. What I call the umbrella palm, but what they call here the cahbage palm-a sort of Zotmia alsoplitu-grew abondantly in groups. Wherever there was a clearing we could see high trees, some with their lare white stems rising to nearly a hundred feet before they branched out, while others were completely corered, and almost killed, by masses of creepers Whose leares, of every kind and shape-some large and lroad like the Aristuluchius; others quite finely cut like Loffuliums; others sharp, pointed, and shiny; others agrain palmated-and of every shade of green, gave a tine effect to the different peeps and ristas as we glided along. Presently the clearings became more numerous, and we passed a deserted
village, surrounded by gardens, where some Chinese had settled a few years ago and tried to make a living by supplying ships with vegetables. They did not find the venture successfinl, and have left the district. We passed several small tramways running at right angles into the bush, with little

Zamoa I'ree
huts adjoining, built of rushes and thatched with sugar-cane. In these the men lived when sent down to cat timber for the fences, furmaces, and sleepers for the tramway, as it was pushed further and further mp through the jungle. 'Sugar is a very expensive crop to start, for the work of clearing the jungle is most laborious, and therefore costly. The expense
of cutting down timber for the tinst rough cropping is 10 . per acre. The complete clearing and gruhbing of roots for the purposes ol ploughing and permanent cultivation is not less than 20 . an acre. The cost of clearing alone is thus 30 . an acre. The machinery of the mills, of Scotch manufacture, cost more than 60,000l. Some goo acres have been brought under cultiration. The total capital already expended may be taken at 200,oool. The yield ol sugar is firom three to tive tons per acre. The price may be taken at 2ol. per ton. The produclion of sugar last year was 2,050 toms.'
-The successful results of labour imported from Java are a special feature at Mourillyan. We heard an excellent character of the Jaranese morkpeple. They are sturdy, and most, docile. They are imported for a term of three years, moler strict engagements with the Datch Govermment. An adrance of two to three pounds is given to each workman before he leares home. His fare costs 6l. to Queensland. His Wages are 3os. a month and found. The secret of success has been the adoption of a system ol supervision ly Jaranese sarongs. Javanese are employed to drive locomotives, and for the management of the boilers and most of the machinery in the mills.'

The proprietors of the plantation have 5,000 acres cleared already, and will clear more as soon as they can raise sufficient capital. They lave already invested 250,000l. in the land, 20,000l. in the tram, and 40,000l. in the mills, independent of the money they will require for all sorts of contemplated improvements and additions. The process of crushing is just the same as we saw in Trinidad. The carts bring in the cane from the field, and it is passed through a series of rollers to extract the juice, which is pumped up to a higher floor, where it is received into vats, and then by different processes converted into sugar of three kinds-white, medium white, and light brown. The first-quality sugar is made white
by being subjected to a process of sulphur fumes, which produce beautiful glittering crystals. It is said that this method of treating the sugar is not so satisfactory as the old and rougher process. It seems to bleach the crystallised particles without sufficiently remoring the impurities. The quality of the sugar is, however, excellent, and it commands a high price in England.

From the mitl I was carried through a clean and tidylooking coolie village to a comfortable house of the bungalow type, like those in Mourillyan Harbour, inhabited by Mr. Nash, the proprietor of one of the plantations, and Mr. Levinge, who had kindly arranged a luncheon for us. Australian colonists are the most hospitable people in the world. Their one idea seems to be to endearour to do everything they can for you, to give you the best of everything they possess. Nowhere, in all our far-extending travels, have we received more true hospitality. I had a comfortable sofa provided for me, whereon I lay during lunch, and afterwards I rested in a chair in the rerandah while the others went to see more of the sugar plantation and mitl.

About three o'clock we started back, and returned much quicker than we came up, for which I was tery thankful. Pleasant as the day had been I was getting rather worn out. On our return to Mourillyan our hospitable hosts accompanied us on board, and made an inspection of the 'Sunbeam.' They could not stop long, as our Jersey pilot said we had better be off before dark, the entrance to the harbour being very narrow. It is, however, so well buoyed that when the new chart is pubtished there will be no difficulty in getting in or out at any time of the day or night, with or without a pilot. In the night there are two leading lights which show you the direct way in, the only danger being at spring tides, when the tide sometimes runs eight or nine knots an hour. The harbour looked lorely as we steamed away, and we were quite sorry to leave the little
haven of rest where we had spent such a peaceful, comfortable day and night.

We were soon ontside Mourillyan and past the picturesque mouth of the Johnstone River. Jutging from the photographs, the scenery of this river must be very fine, for the sun-pictures represent several high waterfalls pouring volumes of water orer
dark and perpendicular luasaltic rocks. One of the falls is said to be 300 feet high, and there are several cascades with a fall of between roo and 250 feet. The light breeze from the S.E. carried us on famously. We soon saw the Sermour Range; a little later we found ourselves off the month ol the Mulgrave River, and by midnight had passed through the narrow chamel which divides the Falkland Istands from the mainkand at Cape Grafton. We ladies retired early to hed, and even the chikdren acknowledged to being tired; but the gentlemen phayed whist on deck till a much later hour. The nights are perfect now.

The breeze is rather fresh by day when not under the shelter of a protecting coast ; lut one must remember that if the wind be fresh it is wafting us speedily on our way, and we must not grumble, for we have turned the corner and are now home-ward-loound.

About three o'clock this morning we met a steamer going dorm the coast, and, with the usual fatuity of steamships, she wouk not make ap her mind which way to go until she was close to us, and then ran right across our bows. It is most extraordinary why steamships will not get out of the way of sailing-ships at night. The matter is entirely in their own hands, for the sailing-ship is comparatively helpless. It is quite impossible for the officer on watch to tell at what rate the approaching vessel is moving, and the stemmer ought to alter her helm the very instant a sailing-ship is perceived. Our pace is rather rapid, particularly in light winds, and it is probable that the steamer misjudged her distance from us: The more royages I make the more I feel that the melancholy little paragraphs one only too often sees, headed 'Lost with all lands,' or 'Missing,' are nearly always the result of accidents caused loy a bad look-out and careless steering. I often tell Tom it is his duty to report those cases which come to his own linowledge. The instances have been numerous on this royage alone; but he is too kind-hearted to like to complain, which I consider a mistaken view of humanitarianism.

Sumluy, Angust rith.-I did not wake till late, and then found we had just passed Cairns Harbour, which is said to be a wonderfully rising place. The soil is good and suitable for sugar, and a railway is being rapidly constructed which will open up the interior of this part of Northern Queensland. The scenery is lovely, especially up the Herberton River, where one of the most magnificent materfalls in Australia is to be seen.

We had service at eleren, lout I was only able to listen to the hymos from my cabin. At afternoon service at halfpast four I heard every word just as plainly from my bed on deck as I could have done had I been below in the saloon. This has been one of the most perfect days at sea I can remember, and I was carried up early on deck to admire the beautiful coast, mith the Macalister Pange in the background. At noon to-day we were in lat. $16^{\circ} 37^{\prime}$ S., long. $145^{\circ} 47^{\prime}$ E., stealing quietly along under balloon canvas. At one o'clock we passer the entrance to Port Douglas, another young and rising place. Early in the aftermoon we were

house on the Low Islands, which returned our signals with creditable promptitude, and after sighting Cape Kimberly we found ourselves abreast of the Daintree River, where, I am told, there is some beautiful scenery. A little later Cape Tribulation was passed, where Captain Cook ran his ressel ashore to discover the amount of damage sustained after she had been aground on a coral recf. They are now trying to recorer her guns, which are so overgrown by coral that it is likely to prove a difficult job. Divers have been down and have absolutely seen the guns; but if they try to dislodge them with dymamite the result may be the same as at Springsure with the large opal-that they will be blown to pieces. It is interesting to once more read Captain Cook's royages on the scene of some of his most important discoveries, and to think that many of these peaks, lonys, mountains, and inlets were named by him after some more or less memorable incident. Cape Tribulation lies exactly under the Peter Botte, a large and peculiarly shaped mountain. The whole coast here is very like that of Cuha, esprecially the shape of its mountains and the indentations of its coasts. The sumset was magnificent, and made the momtains look quite volcanic as they rose in the sly against the lurid light, producing red, yellory, and grey tints such as one sees at Tesurius, Etna, or Stromboli.

This afternoon, as we were looking over the side, Tom and I observed a quantity of a brownish substance floating on the surface of the water. We thought it might be either the outpouring of a neighloouring rolcano, or the spawn of some fish, sponge, coral, or alga. We drew up several buckets of this discoloured water, and on closer inspection found the floating matter to be a small sponge which exists in larger pieces at a considerable depth below, but on reaching the surface changes to a sort of powder, which remites again and forms a filmy track for a long distance.

## CHAPTER XYIII.

EAST COAST (continucd).
Montay, August 15 th. -Last night was an anxious one for Tom, who was up and down a grod deal, and did not get to bed until 5.45 A.mi, haring hoisted the pilot-flag and left orders for the racht to jog about until the pilot came on board. It was hall-past eight o'clock before we were securely moored in the harbour, almost alongside of our old friend the little 'Harrier.' Originally a yacht, she is now one of her Majesty's ships, and is used for cruising from one island to another. With 35 men on board, and guns and gear of all kinds, she is not by any means the smart little craft she used to be; but she is in thorough working order, and as good a sea-loat as ever.

Coolitown, in spite of the prejonderance of iron honses and shops, looks rather pretty from the sea, and is picturesquely situated in an amphitheatre of liills, of which Mount Cook is the highest. Its small port is formed by the month of the Endeavour River. There are abundant indications that larger and more substantial luildings will rapidly be substituted for the provisional structures of which Cooktown at present consists. The population is about 2,500 . The Palmer River gold-diggings, and some recent discoveries of tin, which have atlracted a large number of miners, are the chief sources of prosperity. A railway will shortly comect Cooktown with the gold-mines. A section of thirty-troomiles has been already opened. Il was a delicions diby, and I enjoyed sitting under an awning until the aflernoon, when some of the party went on shore to play lawn-temis, whilst the Doctor, Münie and I went for a litlle drive, which did me good, though it tired me at the time.

Tueshluy, August 16 th. - Awoke aloont seven, feeling much refreshed, and went early on leck. Many visitors came on board, only a few of whom I was able to see. All the rest of the party again landed, and at twelve o'clock Tom and I went on board the 'Harrier.' I was carried on deck, and then managed to get below to look at the new alterations. Captain Pike had some pretty watercolour drawings and a good collection of curios, pickecl up at various islands. These were capitally arranged in the cabin, and looked very nice. He kindly gave Mabelle and me some beautiful shells, as well as some gorgonias growing on a pearl-shell. In the afternoon we went out for a drice. On learing the town we followed the same road as yesterday, after which we came to a fairly good bush-road or track, ruming through a prelty country, witlı some fine trees and a great rariety of foliage. We passed one or two nice stations, with comfortalje, deep-verandahed houses, and tidy gardens and orchards. Ultimately we phonged into the regular
bush, where the simdties and mosiguitoes legran to tronkte the rest of the party; but my invahahle aucalyptus oif saved me. Nothing could exced the care ond driver took of me; his chief anxiety was that I shoufd not suffer at single joft beyond what the ronghess of the roul necessitated. He cance out here when he was twenty-one years old, and rushed at once

to the goldfields; found $\mathrm{r}, \mathrm{IOO}$, in three days, on an allurial fiehl 300 miles inland from Sroney; lost it two days after, by putting it into a speculative mining concern which faited the day after he parted with his money. He then became a gentleman's coachman at Sydney, and had several other mining and reefing adrentures on some fieds near the John-
stone River. All went well with him matil he had an attack of fever, which laid him up for eighteen months, and not only absorbed all his own little savings but that of his comrades, to whose kindness he was indeluted for the positive necessaries of life. Now he is coachman at the largest hotel here, and as soon as he has scraped a little money together, intends going off to the Croydon diggings, where I hope he will be fortunate, and trust he will invest his hard-earned money more satisfactorily. Owing to our late departure we had no time to stop, as we had intended, to see the tomb erected over the remains of poor Mrs. Watson, her child, and Ah Sam the Chinaman, who are Jorried here. The story of their death is a sad one, and we listened with interest to the circumstances as related by Mr. Fitzgerald ; which are briefly these.

Elizabeth Wilson, who came originally from Rockhampton, was the wife of Mr. Watson, the owner of some small schooners engaged in the beche-de-mer trade, whose head establishment was at the Lizard Island. Some time in 188 a she persuaded her husband to take one of his vessels on a tom of inspection, learing her with a child of two years old and a couple of faithful Chinamen in charge of the Lizard Island. Mr. Watson set forth very reluctantly, only yielding to his wie's's assurances that with firearms in the house, which she well knew how to manage, she would be in no danger. Soon after her husband's departure, however, the natives came across from the mainland in great force, killed one of the Chimamen, and wounded the other. When it became dark the brave woman hastened to provision one of the square iron tanks used for boiling down the becche-de-mer', and embarked in it with her babe and wounded retainer. Nothing could be more clamsy than such a craft, 4 feet long by 3 feet wide, and perhaps $I_{2} \frac{1}{2}$ feet high. She put water-bottles on board, and with only a shawl for sail and an oar to steer with set forth on the calm sea, towing, howerer, a little dinghy behind, in case of her iron ressel
proving too mmanagealle. The trade-wind cartied the lank thirly miles out to sea to one of the Hawick group; but she was prevented from landing there by the threatening aspect of the llacks in possession. She drifted a little further to a neighbouring island, where the spring tide carried the tank up so far inland that she could not lamel it again. This was the more terrible, as a rery few miles further would have hrought her to the lightship. There were no blacks on the island, to which the tank had been carried. Mrs. Watson had sufficient provisions, but apparently no water. They all must have died of thirst just before an abmulant rainfall. Three weeks later, when their hodies were discovered, there were pools of fresh water around them. In the meantime Mr. Watson callecl at the lightship and recomised his own dinghy, which had drifted thither a few days before. He immediately set out, accompanied ly Mr. Fitzgerald, and soon reached the little island, where he found his wife's body, one arm stin clasping ler child, and the other hand hohting a loader rerolver. Her diary lay close loy, and toll the sad story amost up to the last moment. The dead Chinaman lay near the tank. The bodies were put into rude shells and taken to Cooktown, where they were buried. The poor woman's diary and the tank are preserved in the Museum at Brisbane.

Thursilty, Anyust isth.-We gave Cape Sidmonth a wide berth and fassed Night Island, going close to Cape Direction and Restoration Island, which latter is exactly opposite the narrow opening in the Barrier Reef through which Bligh fomd his way in 1780 , in an open boat, after the Mutiny of the ' Bounty.' Bligh gare the name to Tiestoration Island to commemorate his escape from the mutineers. A little further to the north took us abreast of Providential Channel, through which Captain Cook entered with the greatest difficulty in 1770. He arrived outside the Barrier Reef, rolling hearily to the swell with no wind, and finding it impossible to descry
a single opening. Hope seemed at an end, when, providentially, Captain Cook espied from his masthead what looked like deep water between two rocks, throngh which he safety steered his vessel. From Restoration Island to Cape Weymonth we were considerably exposed to the sea, and rolled about a good deal until we got into the shelter of Weymonth Bay. Passing Fair Cape, we reached liper Island at about eight o'clock, and anchored for the night, close to the lightship, alongside which there was another small steamer. The last fourteen miles lad to be done in the dark. This was a time of great anxiety for Tom, for the passage was narrow, being only about half a mile wide in places, and the current was strong. It hew hard all night, and we longed for the shettered anchorage of last evening.

Friduy, Aumst 19th.-Early this morning Tom and nome of the gentlemen went on board the 'Claremont' lightship. After loreakfast we tanded on the reef. It is a bare heap of sand and coral, save on its highest part, where a few tufts of coarse grass are growing.

Cumal o.j Nemm Oquel Here we found a native of St. Johm, New Brimiswick, lrought up, as he told us, by foreign parents, engaged in the business of colfecting bêche-de-mer, or driel sea-stugs, for which there is a large demand in China.

This white man had in his employ thirty natives. He had five fine boats, which are constantly at work inside the Great Barrier lieef. The money embarked in this enterpise had been
advanced by a bank at Cooktown. Bêche-de-mer commands a high price. We were shown the accumnlated casks full of this unattractive edible, representing a value of many hundreds of pounds. Lee, the head of this estahlishment, was living in a shelter formed of tattered canvas and battered sheets of corrugated iron, lout he evidently possessed the power of command and organisation, and was not without education. He proluced the Admiralty clarts of the coast and Barrier Reef, with large additions to the delineation of the reefs from his orm explorations.

Bèche-de-mer is of rarious qualities. The best is worth r zol. per ton, the next rool., a third ruality gol., and a fourth from Sol. to as low as $30 l$. per ton. The lêche-de-mer is a curions kind of sea-slug, rather like a sea cucumber. Its scientific name is Holothmiu. It makes excellent soup, which is very nourishing, and is like the snail soup so much given to invalids in the south of France. In Cooktorn the Emropeans eat it largely, while in China, as trepang, it is a much-prized and high-priced delicacy.

We had a long and pleasant conversation with Lee, and Tom and I were both much struck with him. Tom was anxious to purchase for me a pair of large harksbill turtle shells which he had scen earlier in the morning on the lightship, but Lee absolutely refused to part with them at any price. He said a man had done him a good tum in Coolitorm, and he had promiseld him the shells. We suggested that it was possible, as the man was a resident of Cooktown, that he might get him another pair and let us have these ; but Lee was quite firm, and said, 'No, I have given my word, and it would be very mrong to break it on any account whatsoerer.' His charts were most interesting, and his own discoveries of new reel's and shoals were intelligently marked. I hope that for the good of the navigating world they may some day be incorporated into an Admiralty chart, but I trust not without
due recognition of Lee's work. He certainly deserves the greatest credit for the careful and painstaking olservations he must have made while cruising in his little schooners about the Barrier Reef. Many a shipwreck may possibly be prerented and many a lile saved by his laborious and at present umrewarded exertions. Just before we were going away it seemed to suddenly dawn upon Lee that Tom was Lord Brassey. He asked the question, and when an answer in the affirmative was given shook hands most warmly, and was delighted when he was told that I was Lady Brassey and that the children were my own dear ones. He had all our history at his fingers' ends, and was extremely pleased to see the 'historical Sunbeam' and 'her spirited owners,' as he called us. Later on in the morning he tried to come on hoard the yacht in his schooner, but unfortunately missel the rope and so lost the opportunity of seeing the vessel. I was interested to hear from him a contirmation of our supposition that the island off which we anchored was the one on which Eliza Watson's body was foumd.

We landed on the leeward side of the island, and on going to the windward shore it was curious to notice the process by which these islands gradually lecome covered with vegetation. The whole shore just ahove high-water mark was covered with little seeds, beans, and rarious other atoms of vegetation which had been dropped lyy lirds or cast up by the sea, and which in process of time will cover the island with trees and shrubs. The island did not look much bigger than half a dozen times the size of the yacht. At low spring tides the most beautiful corals and shells are found.

The blacks we saw on shore were a good-looking set of men, the finest in stature we have yet seen. Lee says he has to be most careful and always 'sleep, with one eye open,' as they are treacherons. They would tum round on him at any moment if they saw a chance and did not know he was well armed.

All the immates of the lightship came on board the yacht, with which they were much delighted. Ihey said they could not have magined anything like it on the sea, and thought they must hare got on dry land without knowing it. We parted with mutual good wishes, and I have no dould that the risit of the 'Sunbeam ' mill be a pleasant little incident, affording much material for conversation for weeks to come. We did not forget to give them some Ambulance papers.

We weighed at 1r.30, and anchored monder the Piper Islants an hour after sunset. I istance, eighty-fire miles.

Suturduy, Iugust zoth.-All hands were called at fomr, and we got under weigh soon after, making Home Islands about seren. Thence we passed through Shelbome Bay, b Hamibal Islands, and so off Orford Ness. The narigation here was very intricate, and necessitated mach troulle and attention on Tom's part, and the taking of endless cross bearings and observations. At 11.50 we passerl the s.s. "Tannadice, and exchanged friendly greetings. All narigators ore the commander of this ship gratitude for reporting the reef named after lis ressel. It lies in a most dangerons position, and would douldtess have brought many a good ship to grief had it not Jeeen reporterl and charted. Soon after we starfed this morning we rery nearly got on another reef. The wind hew fresh and fair, and the current ran strong. Tom chanced to be engaged taking some observations, and so paid, for a few moments, less attention than msual to the pace at which we were going ; and in this hazardons interval the rachit very nearly ran on a coral reef that was only just a-wash.'

From Fern Island, an ahmost straight course through a

[^4]narow channel hemmed in by rocks, reefs, shoals, and islets, brought us to the entrance to the Albany Pass. The navigation is intricate, but the scenery quite lovely; the land on either side of the Pass, whether on the mainland or on the islands, being densely wooded. At Fly Point on the mainland our attention was attracted by some curions-looking projections on a hillside, which resembled an enlarged edition of Stonehenge, in red sandstone. On looking through the glasses we discovered that these projections were ant-hills of an extraordinary peaked shape, some of them being many feet in height.

The entrance to Port Albany and Somerset is narrow; and the strong tide and wind combined to knock up an unpleasant popple. At Somerset on the mainland, and immediately opposite to our anchorage at Port Albany, a pretty little station has heen built, with a Hagstaff in front of the hungalow. On our arrival the Hag which was hoisted was dipped a great many times and a large bonfire was lighted, in order to give us, I suppose, a really warm welcome.

Sumduy, Aunust 21st.-The boat went ashore early this lovely moming to the large house we had seen last night. The station belongs to Mr. Jardine, a relative of the founders of the firm of Jardine, Matheson, \& Co., so well known in China as well as along this coast. The station is for cattle, and they are gradually increasing its boundaries so as to be able to supply Thursday Island and the neighbourhood with fresh meat, of which they are lamentably in need at present. About twenty-five years ago Mr. Jardine drove a mob of 700 cattle from Roclihampton to this place. It took him and his party nearly tro years to accomplish the journey, and they had to fight the blacks on their way.

The men who went ashore in the boat brought off some milk and new-laid eggs. There is excellent water here. The supply is ol,tained from two springs and a well, and as water
is bad, scarce, and dear at Thursday Island, many ships come here for it. Last Sunday there were sixteen schooners in this little port. They are all away now at the reefs, but are expected back next Sunday.

We had Litany at eleven o'clock. In the afternoon I landed with the Doctor, and sat, or rather lay quietly, on the pleasant sandy shore for an hour or tro, while the Doctor and the sailors roamed about and picked up many curious pieces of coral and some lumps of scorie, of which the whole island seems to be formed. There is very little soil beneath the volcanic matter, and it is wonderful how trees and plants manage to grow in such luxuriant fashion. Some cocoa-mut trees have been planted, which are doing exceedingly well, and I rested under their shade, looking up at the sky through the long, pale green leaves. The innumerable flies, ants, and sandflies were troublesome. But what can be expected in a land where the ant-heaps are ten feet high and twenty-four feet in circumference? While on his ranlles with one of our men the Doctor sarr a large suake four or five feet in length, which he vainly tried to kill; but the reptile escaped into a crevice in the rocks amongst the brushwood.

Tom, Tab, and Mr. Wright, in the meantime, went orer to the mainland to pay a visit to Mr. Jardine. They found the sea rather rough in the narrow crossing, and after a stiff clamber up the hillside arrived at the house. Mr. Jardine was away, but his manager, Mr. Schramud, gave them some interesting information about the pearl fishery, and spoke of the trouble of establishing their station in old days. He took them round the paddocks where the bullocks are kept, and then a little way through the bush, where he showed them an encampment of aborigines which was much better constructed than usual. The centre hut was large, with nicely built walls and a substantial thatched roof of coarse dry grass.

The lut was divided into two parts，one section containing two leeds slightly raised from the floor，and the other a ferw rongh seats and a table，upon which stood a hooken lamp and a drum，apparently hollowed out from a piece of wool．Mr． Schramud gave the drum to Tab，saying that its pecmiarity consisted in the lact that，though the matives possessed no adzes or chisels，the wood was completely hollowed ont，and

部 ret it must hare been done with linives of the most in－ ferior description．He had often tried，unsuccessfully，to ＇catch the matives at work＇ as he expressed it，in order to watch their methor of deal－ ing with such hard wood．On learing the encampment the party returned to the beach and came across in the ratter to the istand，landing in the nice hittle sheltered cove where the Doctor and I were esta－ hished．

Shortly afterwards the Joctor and Mr．Wright starterl across the hills to meet the others，while Tom，Tab，and I returned，or rather tried to get lack，to the raclit in the gig and the cutter，but the tide had fallen considerably，and the reef orer which we had floated so gaily on landing，was now shorring all sorts of nasty little jagged heads and rounded tops，both abore and rery near the surface of the water．It was not withont many bmps and jars，and a certain amount of risk of finding ourselves firmly agromed，that we fairly emerged into the open sea；then a
long pull, a strong pulf, and a pull adl together against the swiftly running current brought us once more alongside the goodship,'Smleam.'

The rest of the party had still greater difficulty in getting off, for the tide was falling every minute, and the dinghy land to be sent off to pick them up one hy one and transler them to the gis. They seemed to have enjoyed their walk very much, and descrifed the istand as being covered with scrub. They saw a few anmals which, thongh wild now, have exidently once been domesticated, and actually strmbled upon a fanily of little pigs. They chimbed orer the hild at the back of the landing-place and descended to the windward shore, where they fomod a stretch of beautiful firm white sand, extending for some distance along the coast, indented by many pretty little coves and lays, in which howerer there was not much flotsiam and jetsam to lee collecterl. Mr. Wrighe and the Doctor had atso been to the windward beach, lout by a different route, which led them throngh a valley full of extraordinary ant-hills. From their description this place must have looked dike a reritade city of tombs, something like the view of Jerusillem from the Mount of Olives. I was somy they han not talien a camera with them, although we had already taken photographs of isolater ant-hills. The Ioctor saw another suake quite as large as the first, but it also escaped lefore he could get within strik. ing distance of it. Perlaps it was just as well it did escapue, as we heard afterwards that they are remonm, in fact deady. There is no cure for their bite, and thongh they get ont of you way if they can, when once attacked, or if you chance to stand between them and their hole, they fly at you most vicionsly, and their lite has generally fatal results.

We had evening prayers on board at six, and alter a puiet evening's reading, went to bed rather early.

Imulay, dugust azud.-I sent ashore this morning, by the men who went for the milk, a few books and Ambulance
papers for Mr. Jardine, in return for which he sent me several beautiful pearl-shells, some of which had curious corals growing on them. Mr. Schramud paid us an early visit. He was much interested

Hammeribend Uyster in the Ambulance prapers I had sent limin, and said he always had a good deal of amateur doctoring to do, both for himself and others, when out in the bush. He gave me a vivid description of how on one occasion his horse, usually a quiet animal, first threw him against the tronk of a tree, hreaking his leg in two places, and then, instead of standing still for him to remount, bolted off to the station, seven miles array. Mr. Schramud crawled to the nearest tree, stripped some bark off with his knife, pulded it as well as he could with some portion of his garments, and with two straps which he fortunately found in his pocket strapped his leg up, making what he described as an excellent splint or cradte. He then proceeded to drag himself on his hands and knees through the bush towards the station, a terrible journey, for he had not a drop of water or fond of any kind with him. Some hours passed before the people at the station, seeing his horse come home riderless and guessing an accident, set out to trace the tracks of the horse through the bush by the light of a lantern, and found him with much difficulty.

We had great trouble in getting up our anchors this morning, for they were fouled in every possille way, and it was nearly eleven before we started and were fairly steaming through Albany Pass towards Cape Yorke, on our way to the Thursday Island group. Cape Yorke has been described
as the seat of Govermment in these parts, Jut is a melancholy looking place, and can never have been of any importance. Tom did not quite like taking the moner and shorter chamel to Thursday Island, so we went to the north of Wednesday and Hammond Islands, and arrived at the hack of Goode Island, where there is a signal-station and lighthonse, from which they signalled a lind welcome and an offer of a pilot, which was declined with thanks. We then rounderl the island and proceeded to Nomanly Sound close to Friday Island, and, after a tremendous tussle with the tide, finally reached Thursday Isfand and anchored in Normanby Sound just off Port Kemedy, the name given to the capital of the island, atter the late Governor of Queensland.

Thurstay Island is one of an extensive and intricate group. The chicf buidding material used in the settlement is corrugated iron, embellished hy rerandahs supported on wooden posts and nattily painted, making the little dreltings look both pretty and comfortalite. The Residency is a larger hungalow on the top of a little hill, and half a dozen fairly good houses chuster round it. Then comes a row of stores along the sea-face, and a few more houses stand at the back. A soit sandy track runs in fiont of the stores, Jont there are no roads, and consequently no relicles, and no draught heasts. There is no communication, except fiom the risits of occasional steamers, nor are any provisions oltainable, except camed meat and frnits. The regetables are arown liy the invaluable Chinese, on some of the islands opposite. Eren the water, of which the supply is scanty, is condensed. The only servants arailahle are people of colour. The larlies have to do everything for themselves, and chitdren of eleren and twelve years are frequently trained by the force of circumstances to become as gool cooks and housemaids as many a well-paid servant at home. A gentleman living here said to me the other day, 'IIow little do our sisters in Enstand linow
the way we live in some of the colonies! I am very glad you have come out, Lady Brassey, for you will be able to describe, as we camot in letters, the really hard, rough life we lead here.' For those who are well and strong, and can enjoy roughing it, constantly knocking about in a small schooner from island to island, with often nothing to eat except cocoa-muts and yams, the life is not intolerable; but for those who are delicate, and not able to hear without suffering these conditions, it is indeed a rery hard life. The women who bravely liace these hardships deserve all our admiration and sympathy. In spite of the great difficulties, they

manage to maintain a high standard of edncation amt refinement. Truly their lives read a tesson to us afl, and teach us how much there is to le thankful for, and how little real canse we have to grombie at many things about which we make a fuss.

Mr. Milman, the Tiesident, and Mr. Symes, the Commissioner of Customs, called upon us soon after ow arrival, and took the rest of the party on shore to larn-temnis, which must be a great resource here, for there is no sport of any kind. Mr. Milman has made a good temis-court, and anybody who fikes can play there every atternoon. The society on Thursday Istand consists of two resident ladies, supplemented by occasional visitor's, and six gentlemen. Besides this handful of Engtish, Mr. Halt lives on Prince of Wades' Istand, and Captain and Mrs. Stevens on Goode Istand.

Mr. Mihman was anxious to take us to Murray and Darntey Islands, in his little steamer the 'Albatross,' but she is at present looking for escaped conricts from New Caledronia, and it seems doubtful when she will return. The story abont these escaped conricts is rather interesting. A hoat's crew landed here the other day, with four men, who stated they were shipwrecked mariners. They were att examined separately, and told such inconsistent stories (even differing as to whether their ship had one, two, or three masts), that suspicion was aroused. Some were Italians, but one appeared to be a Frenchman, though he pretended not to understand a word of the language. They are undoudtedty escaped conricts from New Caledonia. Two own to having had another man with them, and say that when they landed he disappeared. The others will not acknowledge that the party was ever more than four in mumler, but the btacks have since reported finding a body on the leach twelve mites from where these men tanded, near Somerset. There are still five men wandering about, who were hospitably entertained and furnished with food and
clothes ly Mr. Jardine, at Somerset, before he knew who they were, and three others were compelled to go on board the 'Claremont' lightship,

The last Irill in Arsemetite through want of food, and were promptly shipped off to graol in Brisbane. The 'Allatross' was the little steamer we saw lying alongside the lightship at Piper Island, on the igth inst. She was then on her way to search all the reef's and islands lor the five missing men. I hope it will not be long before they are lorought in, for, independent of any other erimes they have committed, they must almosi certainly have been guilty of a most brutal murder, and have killed their own comrade. It is wonderful how so many of these men escape. It is difficult to understand how they can procure boats, prorisions, and sufficient water for the voyage of over 2,500 miles, that being about the distance fiom New Caledonia to Rockhampton or Cooktown. The run between New Caledonia and Australia is dead to leeward before the trade-winds.

## CHAPTER XIX.

PRINCE OF WALES' ISLAND.
Tuesday, August $23 r d .-I$ had a better night, and awoke feeling much refreshed. Most of the party went early ashore to see what this uninteresting town is like. Tom spent a busy morning with Mr. Milman, going into statistics, fortification questions, and so forth. In the afternoon we steamed across to the pearl-shell station on Prince of Wales' Island, managed ly Mr. Hall. He has a nice bmgalow there, and seems very lusy and happy in lis occupation, contriving to keep good friends with all the 'boys,' as the coloured labourers from Manilla, China, the South Sea Islands, and other places are called. These 'bors' are now busily occupied in moading the shells from the looats and cleaning and preparing them for the market, which latter process we had come to see to-day. First we went to a small shed where about half a dozen 'hoys' were employed, some in chopping and scraping the shells in order to reduce their weight, whilst others were washing and cleaning them with brushes made from the outside of
the cocoa-nut hask, which, when split into strips, is excellent for the purpose, as it scrapes and polishes the shells without scratching them. 'The boxes stood ready outside for packing, each holding about two cwt. of shells, valued at inl. per cwt. The number of shells varies according to their size, from sixty to sixty-five fitting into each box. On a table in the middle of the shed the shells were being quickly packed and nailed up, ready for exportation. They are just now higher in price, on account of the disaster on the north-west coast of Western Austratia, which has temporarily crippled that rival station. From the cleaning and packing shed we went to another, where the diving apparatus is kept. This was sent out from England, and is exactly the same as that in use everywhere, leing made to fit tightly round the ankles, wrists, and neck, with an immense superfluity of space in the middle to hold a storage of air. Besides this heary dress, divers wear a belt with a large knife stuck into it, to cut themselves free from any obstacle their ropes may get foul of, and they also have a hook, to which their air-pipe is attached. In addition to an enormons pair of leaden loots, two heary pieces of lead are suspended over their shoulders, one piece lying on their chest and the other on their back. They descend with great rapidity, and can walk, with the current, on the bottom easily enough ; but woe betide them if the tender is not careful, for if their air-line catches in anything it is absolutely impossible for them to make any headway against the tide. Unless the men above are quick and clever enough to repair the mistake promptly, they are lost.

Mr. Hall had kindly prepared tea for us at his house, but I wished to return on Joard, and so deferred my visit until a future occasion. On returning to our anchorage we had quite a business to stem the tide, and took a long time to reach our destination. The others arrived in time to go on shore and have a game of lawn-temnis, an amusement which they all
much enjoy, and which does them a great deat of wool in the intervals of their royages. Mr. Mitman dince with us and told me a great many interesting things alout his istamb, and afterwards the gentlemen had some good games of whist. I have at last heard the real story of the opals, for Mr. Milman's orerseer was the first to hring in a piece of ond otf the Blackall station on the Listorret Downs, in 1869 . The heautiful frag. ment stood on the mantelpiece for several years before it was thonght of any value, but at the time of the great mining fever attention was attracted to the specimen, and it was sent to a mineralogist, who pronounced it to be a fine and valuable opal. The story struck me as being very similar to that tok of the first diamond found in South Afriea; but doubtless there is a strong family likeness in the early history of all gem-bearing districts.

Wednesiday, Anyust 2 $f^{t h}$ - At ten o'clock this morning Mr. Mihman came an board, and we proceeded down the Sound to Goode Island, where we anchored alout half a mile from the shore. Tom, Tal, Nabetle, and Mr. Milman landed at once, and walked up to the lighthouse to take a bird's-eye riew of this extensive archipetago and to discuss the best methor of defence, about which Mr. Aliman was anxious to know Tom's opinion. Later on I landed with the rest of the party, and we went to see Captain and Mrs. Sterens, the former of whom is the manager of the peartfishing station here. I then retumed with Mis. Sterens and her children to lunch on board the yacht. Whilst I was still lying down to rest I heard a bustle on deck as if the dinghy were being lowerel, and as I wanted to send a message on shore I called to them to stop. In reply they told me that 'Sir Roger' was swimming off to the vacht, and that not a moment must lue lost in truing to sare him. It did not tend to calm my fears when Mrs. Stevens told me that the bay was perfectly full of sharks, and that she herself hand lost a
fine dog not a month ago under similar circumstances. Poor old 'Sir Roger' swam bravely out, keeping his head well above the water ; but what with the fear of the strong current dashing him against the sharp coral reefs, and the dread of seeing him dragged under by the snags of a ferocious stark, I spent a bad quarter of an hour. At last I saw him pulled safely into the loat. I have heen so ill lately, and necessarity lett so much alone when the others were on shore, that my dog las become more than ever a companion to me, and never leaves my chair or hed lor an instant if he can possibly help' it. He had been fairly driven away this morning to accompany Tom on lis long watk to the lighthonse, for I knew the outing would do lim good. Halfway up the hill he refused to fotlow any further, and bolted back, in a straight line, to the beach, and had actuatly swom more than hatfway to the yacht before he was picked up. I shoutd hardty have thought a dog could identify the resset at so great a distance.

Those of the party who had heen teft on shore came off to a tate tunch, and shortty afterwards we got up our anchor and steamed lack towards Thursday 1stand. This was again a work of great diffucuty, for the tide ran eight or mine knots an hour, and a stiff gale was blowing against us. Once or twice, in the narrows, we positively stood still for five or ten minutes at a time, and the chief engineer was considerably claffed about his belored engines not moving the vassel ahead at alt. We reached our anchorage safely at hadf-past four, and soon atterwards many people came off to the yacht. I was too tired to see them, but 1 am told they appeared greatty interested in their inspection. Some of our own party went ashore in the aftermoon to lawn-temis, and Mr. Mihman came back with them to dinner.

T'lurrsdiy, An!ust 25 ll. - We were to have been off, first at dayhreak, and then at 9 A.m. When Mr. Milman and Mis. Hunt, the wife of the missionary, whom we were going to
conrey to Darnley Island, appeared on board, it was blowing a strong gale of wind nearly dead in ow teeth, and the royage did not offer a very cheerful prospect. As we had made all arrangements, we thought it better to proceed. At half-past six we started, and, passing Ninepin Rock and Saddle Istand, soon found ourselves in a channel full of reefs, rocks, istands, islets, and dangers seen and unseen, which made the navigation an anxious task for Tom. He mas adty assisted by Mr. Milman. It was a most mpleasant morning, and, keep-

ing quietly down in my berth, I think I was better off than some of those on deck. After passing Ninepin and Saddle Islands, and the three island-sisters, Poll, Bet, and Sue, we made Cocoa-nut Island, one of the fow high islands we have seen to-day. During the afternoon the narigation continued to be intricate, hut shortly after sunset we marle Iork Islands, muder the lee of the larger of which we anchoren for the night in tolerably shettered water. The York Istands are two in number, connected with each other at low water by a sandy spit. A semicircular reef four miles łong and nearly two miles
broad extends along the south side of the islands, the larger of which is one and a half mile long, and lies towards the western end of the reef, while the other is on its north-eastern extremity. There are only two white men living on York Islands; one is an English gentleman, and the other bears the name of Yankee Ned. He is the proud possessor of a telescope which, he declares, belonged either to Captain Cook or Admiral La Perouse. It hears marks of great antiquity, but there is no name or descriptive mark to show that it ever really was used by such distinguished navigators. These two men have a very large béche-de-mer station here, which they manage with the aid of some natives, and make over 1,000 . a year out of it.

Friduy, Aumust 26 th.-The wind was blowing stronger than erer to-day at daylight. We got under weigh at six as prearranged, hut were no sooner out of the shelter of the island than Tom came to ask if it would not be better, on my account, to turn back, for we should have filty miles or more beating dead in the wind's eye to Murray Island, besides which the weather was so thick that we should have some difficulty in seeing the unsurveyed coral reefs through which we must pass. The only oljection to this course was that we had promised to convey Mrs. Hunt to her new mission station at Murray Island. We finally decided to proceed as far as Darnley Island, which we should necessarily pass on the way to Muray Island; so, passing Camphell, Stevens, and Nepean Islands, at which immmerable cross-hearings were taken, we anchored off Darnley Island precisely at half-past ten. It is rery pretty as seen from the sea, with large groves of cocoa-nut trees growing right down to the shore. On the higher ground the cleared slopes of grass give it at a distance something of the look of an English park. At half-past eleren we all landed, being only too glad to have dry land once more leeneath our feet, after the shaking and tossing
about of the last twenty-four hours. All our anxieties as to Mrs. Hunt were relieved by seeing her lushamd's schooner; the 'Mary,' riding quietly at anchor in the lay. The difficulties of landing were great, for the tide was low and the poor gig kept bumping against the coral-reets and rocks to such an extent that I was afraid she would lave a hole linocked in her bottom. However, some of the natives came out to help us, and, wading waist-deep in the water, guided us into a small chamel, and from thence carried us one by one ashore. I was borme in my chair straight to the house of the chief, who is called King Jack, and who, with his wife, was anxious to welcome and shake hands with us all. The flag flying before his trim little cottage-red with a yellow cross—did not satisfy King Jack at all, so we promised him a blne Jack for use on luture lestive occasions.

At the luack of the village a grove of cocoa-muts maving in the strong sea-breeze put me in mind of a South Sea island, such as we so often landed on in going round the world in IS70. Even the dress of the natives was just the same, consisting of the original long George II. sack, brought out by the first missionaries, with its original shape somewhat lost and altered by the lapse of long years and the variety of hands through which the pattern lias passed. We rested in the hack garden for some time. The chief's men climbed the trees and brought us down fresh cocoa-nats, giving us the milk and the nice creamy sulostance which lines the shell when the nuts are quite young. This is most delicions, and is a danty one never has a chance of tasting in England, for it is guite different to the dried-up and aged cocoa-nuts to be procured from Covent Garden. We took some photographis of the grouns of natives and of the curious native boats, hollowed out of a single trunk, which were lying pulled up on the shore lefore us. The larger canoes are marle from timber grown in New Guinea, which must be much larger than any trees we saw
growing on the island. Alter a short delay I was carried by some native policemen through a little village consisting of a few circular and oblong louses made of plaited grass and thatch, all of which had been so familiar to one's eyes in the South Seas. It was duite like old times to see these dwellings again, and some of them were actually occupied by gemuine South Sea Islanders-Kianalias. The men of these

At the end of the village stood the missionary's house, which was a superior abode to the others. It has been built aud is kept for the use of while missionaries when they come orer from the other islands. The native teachers generally live in a little grass hat at the side, and content themselves with gazing at the 'mansion' - a small dwelling, consisting of only one main room and two side-rooms off it, with deep verandalhs all round. The native teacher is a well-educated

Kanaka. His wife is of the same race, and is pleasant and agreeable. She seemed to keep her honse, hut, and children very tidy. Our path led up from here though hanana and cocoa-nat groves, with an undergrowth of sweet potatoes, to the top of a little hill abont 150 feet high. Close to the rather dilapidated native church we found a leantiful sward of grass shaded by cocoa-nut trees, where we established ourselves to rest and look at the riew. After a time the others joined us, and we took some photographs hetore lunch, and then the party went off in different directions- -some to the windward beach to see what shells could be collected ; but they were not very successful in their quest, the violence of the waves haring either killed or lroken most of the specimens fomnd. Others went clambering up to the top of the high hills; white Mr. Nihman sat in my carrying-chair and held a sort of open-air court. The natives formed a picturesque group on the grass aromnd him. He found out all the news of the place since he had last been here, and iniuired into the administration of justice in a sort of pigeon-English somewhat difficult to understand.

There was onty one crime to report. A poor woman had been guilty of what they called 'telling tales'-namely, saying that the laws of Murray Istand were good, but that at Damley Istand they were 'cory bad.' For this the old chief, King Jack, promptly fined her 200 cocoa-nuts, which, hy the way, we lought for ros., knowing what a wetcome addition they will prove to our own and the crew's diet, for fresh vegetables are difficult to procure. Mr. Niman has taken the precaution of planting these islands with cocoa-nuts, and he allows the people to keep a certain number, so that there is a definite and just way of punishing them if they offend against the law, ly fining them so many cocon-muts. The money paid for the cocoa-muts goes into the hational exchequer ; and although the amount realised is not large, as may be
imagined, it contrihates to the cost of repairs or improvements.

During the afternoon 'Sir Roger' performed some of his tricks for the amusement of the assembled natives. Their delight was intense and mbounded. Though he may have had a more crowded, he never had a more enthusiastic, andience. The performance was repeated sereral times, but the natives never seemed to weary of it. I thoroughly enjoyed the trip to the island to-day, and found it delicious to lie lazily under the shade of the cocoa-nut trees and listen to just as much or as little as I liked of what was going on round me. The rustle of the wind through the long leaves of the cocoa-nut trees is far more calm and peaceful than even the murmur of the 'immemorial elms; and the glimpses of the sea, dotted by small islands and coral reefs, on which the waves lroke in beantiful creamy foam, were most lovely. Alsout four o'elock we went down again to the village, passing through tracts of cultivated gromed bearing crops of swect potatoes. On our way we paused to admire the chureh bellan ancient dimer-l,ell, which hung ly a piece of string from the longest and straggiest arm of a very ofd and leatless tree. All the rest of the party were assembled on the beach, and a brisk trade was being done in corals, shells, and cocoi-nats, paid for in tolaceo, which the islanders much prefer to money. The teacher's wife was made happy loy the gift of a reel of white cotton and a packet of needles, which will enable her to cany out her dressmaking operations and repairs with much greater ease. Her eyes quite glistened as she took them. Mr. Sarage tuld me that the two Regina lirds-of-paradise tails which I bought to-day were obtained from a native of New Guinta who lives on the island of Peram, at the mouth of the Fly River. From this man's accomet, the lirds must abound there; but I cannot help regreting that the poor creatures should be sacaificed merely to line the cloaks of rich ladies.

While we were up on the hill the crew had been engaged in procuring water to replenish our last-failing stock. They had had great labour in bringing off the water, for the well is half a mile from the bearh, and the sea was very rongh. We only got a ton atter all, when we should have liked a dozen or fourteen tons : Soon after our return on board a number of boats followed us, laden with baskets of sweet potatoes, yams, prompkins, cocoa-nuts, shells, coral, \&c. So great was the supply that the leck of the ship soon became covered with native produce, the owners of which, like all true savages, considered it a matter of etipuette and dignity not to express the least surprise or astonishment at anything they saw, although somewhat taken aback loy the pictures and large lookingglasses. They were very pleasant and obedient, doing exactly what they were told without tonching anything.

Though feeling much the better for my outing, I became tired, and was glad to lie down and rest in the deck-louse. The little mission schooner, the 'Mary,' with a dove and olivebranch on her Hag as a message of peace, was tossing and rolling about in the most unpleasant manner, exposing her keel at almost every ware, first to windward and then to leeward. Her captain and crew, a fine, determined-looking set of Kanaka men, did not seem to mind the sea at all. I pity poor Mr. and Mrs. Hunt, who will have to make their royage to Murray Island to-morrow in the teeth of this heavy wind. Mrs. Hunt remained on shore, but Mr. Hunt and Mr. Sarage came on board to dimner ; and from Mr. Savage I heard a good deal of his work among the natives. The station here is comparatively small, but at Murray Island a training-school for native teachers has been established, that island being somewhat larger than this, surrounded by live coral reefs, and containing about 400 inhabitants. Their nincipal field of mission operations among the natives appears to be in the Fly River in New Guinea, which is a most unhealthy spot. Their work

is now leginning to be attended with a large measure of success. At first no attempt was made to teach the Papuans English. The missionaries were the only people who could commmicate with the natives. The ignorance of English proved a great drawback to all trade, and it has certainly retarded for years to come the opening up of the country. Not only is the climate bad, but the natives of New Guinea are treacherous, and not to lee depended on for a moment.

Mr. Savage has been out here for two years, thirteen months of which time he has lived entirely lyy himself. Mr. and Mrs. Hunt are now going to inhalit Murray Island, with ouly one European carpenter as their companion, while Mr. Sarage will be stationed principally at the Fly River. The mission receives all its supplies from England riu Thursday Island, from which place they are fetched in the little schooner, built ly the carpenter Bruce, who was formerly a yachthuilder. The life of these good people appears to be one of
much self-abnegation. I hope with all my heart that the mission may succeed, and that the deroted mishomaries will be remarded for their self-denying exertions.

Suturday, August 2-th.-A grey moming, with the wind blowing stronger than ever. Narigation in these seas is by no means easy. During the night we had dragsed our anchor a little, enough to get mpleasantly near the shore; and just as we weighed, the sails did not fill so quickly as they ought to have done, which cansed the yacht to pay off with her head tourtrals the shore instead of off shore. There was barely a ship's length betreen us and the reef. It was with great difficulty, and only by promptly dropping the anchor, that we prevented ourselves from rumning straight on to shore. On first starting we thought we should only get to leet Island, one of the three sisters. These islets swarm with turtle, which lay their eggs on the sandy shores all the year round. We were looking forward to turtle soup, turtle eggs, and all sorts of delicacies, to make a pleasant change in the monotony of our daily fare. The wind, however, hew so fresh that, though close-reefed, we sailed from ten to twelve knots an hour, which of course caused a considerable amount of motion.

At a little before noon to-day we were off Cocoa-mut Island. Later we passed in succession the Bet, Sue, and Poll Islands, and the Ninepin Rock, a curious-shaped little islet, though anything less like a ninepin I camot imagine. In the afternoon, by dint of hard driving, we were able to reach a good anchorage in Flinders Chamel, between Horn and Wednesday Island. As an instance of the rapidity of our sailing speed, I may mention that seven measured miles between the two islands was done in rather less than half an hour; which, considering te were close-hauled, was not bad work. We had a fairly quiet night, though it was blowing a gale, and of course the ship tumbled and rocked about a good deal.

Sunduy, August 28 th. - As the tide was ruming very
strong, it was decided not to start until eleven o'clock. We therefore had prayers before starting, and sailed slowly across to our old anchorage, which we reached about midday.

In the afternoon I was carried ashore to see Mrs. Milman, who appears to be a great invalid. She has two nice little girls, who look after the house and sare their mother a great deal of tronble. There was another little girl there, a danghter of Canon Taylor, who had come up from Cooktown on a visit.

The Residency is a pleasant house, open to every breath of wind that blows ; of which, according to our experience of these parts, there is plenty. The inhabitants tell us that this is the normal condition of the weather here during nine months of the twelve. No doubt these breezes are health-giving, but the perpetual blowing of the wind must be fatiguing. It roars and whistles and shakes the house like an incessant hurricane. The three months during mhich there is no wind is at the period of the north-east monsoon, and then the rain descends in torrents. Life cluring this time of the year at Thursclay Island is described as being cheary indeed.

We returned on looard at half-past fire, and everybody but myself landed again later, and went to church at half-past seven at the Court House. Mr. Mimman read prayers and a sermon, and Tom read the lessons.

Mondry, August 29th.-A very windy morning. Some pearlmerchants came on board, bringing fine specimens of pearls, which seem quite as costly here as in London. I bought some shells, more as specimens of queer freaks of nature than for any intrinsic beanty or value they possessed. In the afternoon we landed again on Thursday Island, and Tom and I explored the little town, round which $I$ was carried in a comfortable chair. The place is larger than I expected, and the stores seemed well furnished with dry goods of all kinds, besides timed meats, regetables, and fruit; but there are no fresh provisions. A fen goslings, very like our wild geese, but

not so big as a good-sized duck, were rumning about, for which the ormers asked 30 s. apiece! There were also some chickens to be hought for ros. each. Some of the houses are really not unsightly when seen from a distance, but when you approach them the adjacent ground is found to be stremn with strat, paper, old tins, broken bottles, and rublish of every description. I should like to have all the rublish taken out to sea and sunk, and then I would plant more trees and shrubs. At present some miserablelooking cocoanuts, and a

In the Torres Strats
soms, comprise everything in the way of vegetation. On our way from the town to the Residency we passed Mr. Symes's house. His mother very kindly came out to welcome us, and asked us to go into their comfortable bungatow and have some tea, which we trere most thankful for. I was so tired. Mrs. Symes had a married daughter and tro nice little grandchildren living with her, and we had a pleasant chat. She
gave me what she says is an infallible cure for bronchitis, and I only hope it may prore so. I spoke to Mrs. Symes and her daughter, to whom I had previously sent papers, about the Ambulance ; and they appeared to be quite keen about it, and promised to do all in their power to aid any classes that might be established here. Continuing our walk we went to the excellent lamn-tennis ground just below Mr. Milman's house. We could only make a short stay, for the sm had set and it was rapidly getting dark. The sea was rough going off, and I felt rather exhansted by the time I arrived on board. Mr. Hall and Dr. Salter came to dinner, and with the latter I had a long talk about the Ambulance. Dr. Salter is quite willing to give the lectures, but there would he great difficulty in bringing people together for the classes, for the tides are strong and shifty, and so uncertain that one can never know till the morning what they are going to be. The Doctor says the only chance of inducing people to come will be to find out approximately the most convenient day and hour and then hoist the signal on the flagstaff, so that the inhalistants of the neighbouring islands may see it and attend if they choose. Several of the masters and managers of the pearl-shelling stations have promised to come themselves, and then to try and pass on the knowledge they may acquire to their Malay, Manilla, and other 'boys' who go out pearl-fishing and after leêche-de-mer. The instructions will be useful to these people, for accidents often happen, principally from their own carelessness. The divers are sometimes hoisted up to the surface asphyxiated from want of air, and requiring almost precisely similar treatment to the apparently drowned. Only last week they had a man on board one of the schooners very nearly dead, but still able to speak and move. Instead of attempting to relieve him they brought him here, a distance of fifteen miles; and by the time he arrived, of course the little spark of life he had possessed was quite extinguished.

If only a linowledge such as that convered by the instructions given by the St. John Ambulance Association can be spread here, particularly among the people employed at the pearlfishing stations, it will be most valuable. There are a great many men engaged in the pearl trade in the Torres Strats, New Guinea, and the numerous islands in the vicinity. It is, of comrse, impossille to establish a centre here: but I hope before I leare to set a class on foot, with Mr. Hall for the secretary, as lie is most enthasiastic on the subject. Tom and I will, as usual in such cases, become life members, so as to give the movement a start.

Church on Darnley Island

## APPENDIX.

#### Abstract

PIRT I.

TOIAGE FROM DARNLEY ISLAND TO PORT DARIITN, MAURITIUS, CAPE OF GOOD HOPE, AND ENGLAND.

(By Lolid Brassey.)
THE pen having fallen from her hand, the task which a brave yet gentle spirit was struggling so hard to complete must be accomplished by one who does not possess her gifts. For obvious reasons, the description of the remainder of the royage will be compressed within the closest limits.

The 'Sunbeam' sailed from Thursday Island on September ist. For three days the winds were farourable, from the eastward. The next two days being calm, the voyage was pursued under steam.

On September 5 th, in the evening, the 'Sunbeam' was navigator, not without difficulty, through the intricate channels of Clarence Strait. On the 6th, at an early hour the anchor was dropped off the settlement of Palmerston. Our arrival at Port Darwin took place under such circumstances as render it impossible to offer any description from personal observation.

Palmerston, the name given to the settlement at Port Darwin, is beautifully situated on wooded headlands, jutting out into the harbour, in whose ample waters it is no figure of speecli to say the navies of Europe could be anchored. The buildings have been erected with considerable taste. A fine esplanade has been laid out along the sea fiont. The electric wire comects Palmerston with all the great colonies of Australia. In constructing the overland telegraph from South Australia, a great mitdle section of the
continent was discorered, capable of producing pasture for tens of millions of sheep and millions of cattle and horses. The first section from the north, of what will eventually be the Trans-Australim Railway, has been commenced, and is being carried out with energy by Messrs. Miller, the well-known Melbourne contractors for public works.

The total area of the northern territory of South Australia is 523,620 square miles. Within this vast expanse are stony wastes and waterless tracts, vast rolling downs, wide grassy plains, rich alluvial flats, large navigable rivers, and metalliferous areas, exceptionally rich in tin, coal, copper, and silver. Thas far mining hats been more successful than agriculture. The Chinese have alone beon able to accomplish anything in cultivation. They have gathered harvests of rice and sugar-cone from the limited areas which they have taken in hand. On the banks of the rivers coffee could be grown in many places.

The climate is tropical, and malaria, with its lever and agne, is prevalent. The mean temperature of the year is 75 degrees, and the thermometer has never been seen lower than 68 degrees. The atmosphere is dank, steamy, and heary with moisture during the wet season, and parching and malarial during the dry season.

From Port Darwin to the Cape of Good Hope, and thence to Sierra Leone, the voyage lay for the most part within the zone of the South-east Trades. Rodriguez Island was sighted on September a6th, and Mauritins was reached on September 2gth. It is a painful task to attempt to describe scenes which would have been painted so muclı more effectively liy another. To give the daily life, which, needless to say, was very sad, I will not attempt.

Manuitins is one of the few ports in which sailing ships still hold the field against steamers. It was filled with a noble fleet. As a mark of sympathy, which touched us deeply, their flags were hoisted at half-mast as soon as onr sad intelligence became known.

Viewsed from the anchorage of Port Lonis, the island of Mauritius presents a scene of mucli beauty. A chain of peaks and craters of picturesque and fantastic forms roms through the island from end to end. The needle-shaped Peter Botte, $2,78_{4}$ feet, and the Ponce, 2,707 feet, are conspicuous summits. All the mountains are of rolcanic formation. Their barren precipices are blue and purple, and their regetation, watered by frequent and abundant showers, is of the richest green. The landscape displayed admirable effects of colour, varying with every change from rain to sunshine.

The Botanical Gardens and the Observatory are the most
 traveller. The gardens are lovely. The lakes, surrounded by palm trees and a most rich and abundant tropical vegetation, are a charming feature. The fine and rare specimens in the gardens included the Traveller's tree, abounding in water, the Ruffia palm from Madagascar, the lettuce-headed pahn, the talipot palm, the Latania aurea from Rodriguez, and another variety of latania from Round Island.

The Observatory, under the supervision of Dr. Meldrum, is chiefly devoted to meteorological and astronomical investigations. In addition to these subjects, observations of the solar spots are taken daily, and transmitted monthly to the Solar Plysics Committee in Lonton. The transit of the moon has been observed with much success. Sea observations from the log-books of vessels tonching at Nauritius are carefully recorded. The tracks and positions at noon of 299 tropical cyclones, which swept over the Indian Ocean south of the equator from 1856 to 1886 , have been laid down on charts, and are ready for publication. The in-curving theory of
cyclones, as worked out by Dr. Meldrum, is now generally adopted, and it would appear that the rules given for the guidance of ships in the Southern Indian Ocean have been the means of saving much life and property.

On the second day of our short stay we paid a quiet visit to the Acting Governor. The recent political convulsions in Mauritius, in connection with Sir Jolm Pope Hemessy, lad by no means subsided. During his leave of absence the Governor was being represented with admirable tact and judgment by Mr. Fleming, who had already succeeded in establishing amicable relations with both sides. Considerable jealousies exist between the English and French residents in Mauritins. They have been unfortunately aroused to an umprecedented degree of violence by the proceedings of Sir John Pope Hennessy. The mass of the population of Mauritius are of mixed race, descendauts of the coolies employed on the plantations. French-or rather patois--speaking Creoles come next in point of numbers. The Chinese are the universal shopkeepers.

Later in the day we ascended the Pouce. It commands a view over the harbour of Port Louis and the interior of the island. The broad and shallow valleys, green with sugar-cane, reminded us much of our own South Downs. From the Ponce we drove to the residence of a relative, who is the owner of extensive sugar-cane plantations. The staple industry of Manritius is the cultivation of sugar. More than 100,000 tons are annually exported. India and Australia are the chief markets. The bounty on the production of sugar in France and Germany has driven the sugar of Mauritius altogether out of Europe. Mauritius received a great blow from the opening of the Suez Canal, but it still possesses abundant resources. The wealth of the island may in some degree be measured by its public revenue, which amounts to no less than $700,000 l$. a year.

Mauritius produces scarcely anything required for its own consumption. It imports rice from India, grain from Australia, oxen from Madagascar, and sheep from the Cape.

Our last morning at Port Louis was devoted to the defences and the docks. Progress is being made with the improvement of existing defences and the construction of new forts. The works are well advanced, and the guns are promised shortly from home. Mauritius possesses three graving-docks. The Albion Dock could be readily enlarged to receive a ship of war. It would be a wise policy on the part of the Government to assist in the work.

The passage from Port Louis to Algoa Bay occupied eleven days. To the southward of the Trades, off the coast of Natal, a short but
severe gale from the sonth-west was encountered. The gale was followed by a fresh breeze from the east, which carried the 'Sunbean 'rapitly to the westward. In three days a distance of 797 miles was covered, with winds from S.E. to N.E.

The 'Sumbeam'reached Port Elizabeth on October iz. The anchorage is protected from all winds except those from the southeast. Port Elizabeth from the sea lias the aspect of a small Brighton. On landing it presents many cheerful indications of prosperity in its pier, railway station, municipal buildings, streets and shops, and last, but not least in the estimation of the traveller, its excellently appointer and hospitable chub. The residential quarter is happily situated on elemated ground, swept by refreshing breezes from the ocean. A large space is covered witl good houses and well-kept lawns. The public gardens are a great feat of horticulture. The arit and sterile soil has been conserted by liberal irrigation into a green oasis, containing groves of palms and a varied tropical regetation. Needless to say the work is the achievennent of a Scotch gardener.

The prosperity of this active commercial centre is the to the trade carried on with Kimberley, of which it is the port. The value of the diamonds producer at himberley was estimated for 1883 at 2,359,000l.; 188+, 2,562,000l.; 1885, 2,228,000l.; 211d 1886, 3,261,000l. These amounts will be exceeded in later returns. As yet, the price per carat slnows no tenclency to decline. The work of mining for diamonds gives employment to a large amomit of well-paid labour. Some 2,000 white employis are engagen at an average wage of $5 l .9 s$. per weck. Twelve thousant coloured men are working under their direction, their carnings exceeding il. per week.

Port Elizabeth is the chief entrepot for ostrich feathers. The value of this article of export for i 886 was over hall a million sterling. The process of selling the feathers by auction is one of the most singular business transactions at which it has been my lot to assist. One of the buyers in attentance, on the occasion of our risit, represents a London firm, and is said to be making an income of over r,oool. per year. A spirited effort is being made to establish an entrcpot for the Cape wines at Port Elizabeth. We visited the extensive cellars uncer the public market, where a company las opener a business, which it is intended to conduct in accordance with the most approved methods of treatment in the wine-growing districts of Europe.

A day was spent at Port Elizabeth, and two days of rapird sailing
before an easterly wind brought the 'Sunbeam' into Table Bay on the morning of October 1 $_{5}$, just in time to gain the anchorage before one of the hard gales from the sonth-east, which are not unfrequently experienced at the Cape, set in. Between Port Darwin and the Cape the distance covered was 1,047 liots mider steam, and 5,622 knots under sail. The average speed muder steam and sail was exactly eight knots. In the fortnight, October 13 to $27,3,073$ linots, giving an average speed of nine knots an homr, were covered under sail alone, with winds of moderate strength. Balloon canvas was freely used.

Table Momntain is admirably described by Hülner as a mighty buttress confronting the restless billows of the Southern Ocean. It was covered, on the morning of our arrival, with the graceful wreaths of mist which have so often excited the admiration of travellers. A strong sonth-east gale was blowing on the occasion. Table Mountain presents to the dwellers in Cape Town a scone of beanty which changes from hour to hour. Every veering of the

Off the C'apue
wind brings some new yet ever eflective atjustment of a mantle of vapour, seldom cast aside, which is sometines silver, sometimes purple, and from time to time subdued to a sombre tone by an approaching fall of rain.

In former years many and disastrons were the losses of life and property in Table Bay. Gales from the N.W. and the NN.E. are frequent in the winter, and blow occasionally with resistless fury. In the old sailing days ships canght at anchor in the bay by one of these terrible storms were doomed to destruction. By the enterprise of the Colonial Govemment, and the skilful engineering of Sir John Coode, a wide area of sheltered anchorage is now afforded. The breakwater has been extender to a length of 560 yaris, and a further extension is far adpanced, which will give a total length of breakmater of $\mathbf{r}, 500$ yards.

A wet dock has been formed, capable of receiving the largest steamers in the ocean mail service, and broad elough tor an ironclad. The principal dimensions are: length, 540 feet; breadth, 68 feet; deptll, 26 feet. An outer harbour, $4+$ acres in extent, will be gradually formed moder the protection of the breakwater. When these works are completed, Cape Town will afford adrantages to shipping such as are scarcely exceerder in any port of Great Britain.

Cape Town contains not a few buildings of which the inlabitants of an older capital might justly be proud. The House of Assembly is a noble structure. The admimably kept and beantifully situated Observatory, the banks, the rulway station, and the doclis are all excellent. The Botanical Gardens, and the shady avenme dividing them from Govermment House, would be an adormment to the finest capital in Europe.

Considerable as are the attractions of Cape Town, they are far exceeded by the cham of its picturesque suburbs, cxtending for some miles along the foot of Table Mountain on its eastern side. The country is richly wooded, chietly with our own dear English trees, and abounds with pleasant buildings, surrounded with gardens bright with the flowers of the summer ol our Northem latitures. The scene recalls the most faroured part of Surey. The cantonments ol the troops at Wynberg, on a well-wooded plateau, have all the lovely features of an English park.

We made an excursion with Sir Gordon Sprigg and his hind family to Constantia, where the Govermment have purchased an old Dutch manor-house, and are cultivating the vine mader the superintendence of Baron Yon Babo, with the view of producing
wines on the most approved European principles. Our host has made one of those interesting and honourable careers for which colonial life offers so many opportunities to those who know how to use them. He began life in the gallery of the House of Commons, as a reporter of debates, in the days of Cobden. As Premier of a Colonial Parliament, he has had an opportmity of applying the maxims of political wisdom gathered from a close observation of our own Parliamentary proceedings.

Another excursion was made to Stellenbosch, a characteristic example of the old Dutch towns of the Cape Colony. We were under the guidance of Sir Gordon Sprigg, Mr. Hofmeyr, and Mr. Tudhope, the Colonial Secretary. The journey from Cape Town occupied an hour by railway. Stellembosch is in many ways a perfect reproduction of a conntry town in Holland. If we miss the canals, we have the domestic architecture, the fine avennes ruming through the principal streets, and the Dutch characteristics of the people. These features give to this distant settlement in South Africa, not one of whose inlabitants probably has ever risited Holland, a markedly national aspect.

On our arrival at Stellenbosch we were driven, under the guidance of the Mayor, to the University, where a mixed staff of protessors, English and Dutch, are doing excellent work in education. We were received by a guard of honour, furnished by the students' Volunteer Corps. Having inspected the University buildings, we drove out to an old Dutch farm, under a burning sun, and throngh a country in which the foliage of the temperate and the tropical zones was closely intermingled.

The farm we visited comprises an extensive range of buildings, with an excellent dwelling-house, roony stables, and the stores, filled with butts of wine, which are characteristic of the district. The buildings form a large quadrangle, surromding a plot of grass shaded by noble trees. The situation of the farm is very striking. It stands in a deep valley, green, fertile, and well watered, but completely hemmed in by mountains of volcanic formation some 4,000 feet in height, beautitnl in form, but entirely devoid of vegetation. Want of rain and the phylloxera are constant anxieties at the Cape. We observed that the field labourers were invariably men of colour. Their earnings do not exceed one shilling per day.

Cape politics have been a fertile sonce of tronble and anxiety to the British Government at home. With the necessarily imperfect knowledge of local circumstances, it is impossible, from London, to deal in a satisfactory mamer with the relations between
the Govermment of a distant colony and neighbou's so little known as the Boers, and savages so rude as the Kaflise ant Zulus. Our errors of the past will not be repeated, il only we resolve firmly not to letter the discretion of the local Govermments, which, in pursuance of a wise policy, we have called into existence.

The visit of Presilent Fruger, of the Transvaal, to President Brand, of the Free State. was a prominent topic at the time of our risit. It lad led to the delivery of a speech by Mr. hiuger, in Which he had dechared the determination ol the Boers to preserve their complete independence. In the Cape Colony people are more interested in the establislment of railway communcation

with the new gold-fields within the borders of the Transvaal than in the question of political union. As yet a certain reluctance is manifested by the Boers to establish railway communication with the Cape. An English company has made a railway from Delagoa Bay to the Transvaal frontier, and the line will slortly be extended to Pretoria. In the meanwhile the people of the Cape Colony are desirous of extending their system of railways, already 1,483 miles in length, into the interior. Considerable discoreries of gold have recently been made within the limits of the Transvaal, but close to the border, and all the workers at the mines are Englishmen from the Cape Colony. There is no reason to donbt that permission to establish railway communication with this newly discovered goldmining district will be ultimately granted.

Among the Boers of the Transvaal a large number are friendly to the English. Once connected with the Cape by railway, and by a Customs mion, which has been mach under discussion, the Cape Colony and the Transvaal will be for all practical purposes of trade united. A divided administration of government in a country of ${ }^{\circ}$ such wide extent is an ummixed advantage.

It was particularly gratifying to hear from Mr. Hofmeyr, the head of the Dutch party in the Cape Parliament, and a most able representative of the Colony in the late Colonial Conference, how entirely satisfied his people are to live under British rule as now conducted. The Dutch colonists at the Cape have no personal relations with Holland. They look back upon their former connection as an interesting listorical association; but the protection which England affords against the occupation of the Cape by some other foreign power is a practical boon, and one greatly valued. There is a party at the Cape which regards with distavour the dependence of the present Premier, Sir Gorton Sprigg, on the Dutch rote, or, as it is called, the Atricander Bond. From another point of view we may hail with satisfaction the success which an Englishman has achieved in wiming the confidence ol the Duteh. While conducting the govermment to their satisfaction, he is thoroughly loyal to his own nationality. Baron Hübner speaks in discouraging tones of our position at the Cape. A much more cheerful impression was conveyed by the present able Governor, Sir Hercules Robinson, and by other eminent men whom I had an opportunity of consulting.

Judging from such indications as came under our personal notice, the native races, so far from being a source of weakness, are a great strength to the colony. The Indians in North America,

the Maoris in New Zealand, the aborigines of Australia, have dis. appeared or dwindled a way before the white man. The Zulus and Kaffirs have proved themselves capable of adopting and promoting civilisation. They show in mumerons instances a ligh appreciation of the blessings of education. They are ready to labour on the farms, on the railways, and in the mines. They are content to live mider the rule of a superior race.

Material prosperity has been greatly advanced by the discoveries of gold, the opening up of gold-fields, and still more by the large amount of wealth which has been derived from the exportation of diamonds.

The 'Sunbeam ' left Cape Town on Octoher 24 th. St. Melena was reached on November zrd. Like all the islands of the Atlantic, it is of volcanic formation. It presents to the ocean on every side a coast-line of precipices, sharp peaks, and gloomy chasms. The contorted slapes of rock and mountain give a powerful impression of the tremendous forces of nature in a period of volcanic activity. The landing-place for St. Helena is muler the lee of the island, at Jamestown, a small town depending entirely on shipping.

Above Jamestown for some 2,000 feet the country is inexpres. sibly sterile. At a ligher level the soil is watered by the frequent showers bronght up from the ocean by the South-east Trades, and is covered with a rich carpet of grass. In every sheltered dell the growth of timber is abundant and varied, combining the trees of the tropics with those of our cold English latitudes. The watercourses are immomerable. The bed of every stream is filled, and every bank is covered with lovely masses of arm-lilies. The scenery of the island is most beautiful. The Acting Governor occupies a fine country house surrounded by a noble park. It is sad to visit Longwood, and to reflect on the intolerable weariness of sucli a place of confinement to the victor in many battles, and the former arbiter of the destinies of Central Europe.

A personal visit to St. Helena is necessary to appreciate the facilities for the defence of the island. The landing-places are few, and they are commanded by works of considerable strength. New works are in progress which will give an extended range of fire to seaward. The grus are not yet to hand. The expenditure recently authorised, amounting to some 10,0001 ., appears fully justified in view of the importance of St. Helena as a coaling station for the Cape route to the East. As a sanatorium it might be of great ralue to the ships of the African Squadron.

The 'Sunbeam' touched at Ascension on November 7 th. This barren and inhospitable rolcanic island has presented a singularly unpromising field of labour to the naval detachment which for many years has been maintained there. Solid and capacious stores, extensive ranges of buildings, miles of roads, the tanks, the hospitals on the seashore and on the mountain, the farm on the peak-a green oasis crowning a heap of cinders-attest the zeal of a succession of officers and men. To the naval reformer they give occasion for reflections on the considerable cost which has been thrown upon the country in the creation of an establishment which las become practically useless through the universal use of steam and the suppression of the slave trade. In the present circumstances St. Helena offers unquestionably superior advantages for all naval purposes. As a coaling station it is in a better position, being approximately equidistant between the Cape and Sierra Leone, and less exposed to rollers, which frequently interrupt the coaling of ships at Ascension. It is repugnant to abandon to ntter ruin an establishment created with mach labour and expense. To this altemative, howerer, we must come, unless we are prepared to put Ascension in a state of defence. The value of the naval stores is

Sierra Leone was reached on November 14th. In this section of the royage the distance under canras was 3.327 knots, the average speed 7.7 knots, and the distance under steam 289 knots, with an average speed of 7 knots. The South-east Trades were light, and balloon canvas again proved extremely serviceable.

Sierra Leone is an important coaling station, half-way between England and the Cape. The harbour is large and safe for slips of heavy tomage. The works of defence are in active progress. The cost is estimated at 22,000 . for works and 15,000 l. for armaments. It is to be regretted that the armament is almost entirely composed of muzzle-loading rifled guns. In addition to the works now in hand, a battery is thought desirable to prevent an attack with longrange guns from seaward. Having admitted Sierra Leone into the list of our coaling stations of the first class, its defence should be made complete against a powerful cruiser.

The British settlements on the West Coast of Africa date from 1672, when the British African Company was first formed. The British protectorate is estimated to extend over 3,000 square miles. Freetown, the capital, is built on a peninsula about eighteen miles long.

The town is backed by mountains of considerable elevation, richly wooded, and beautiful in outline. The streets are laid out with regularity on ground sloping rapidly to the river. The houses are of wood, and the roadways are mpaved. The population is 37,000 . The throng at the landing-place has a decided family resemblance to any similar assemblage of the negro race in the West Indies. The general aspect is cheerful and free from care. The washerwomen, in Manchester print gowns of gorgeous colour, are conspicuous and grotesque personages.

At Sierra Leone the Church of England is strongly supported by the Church Missionary Society. It has a large body of adherents, and is the see of a Bishop. It has a college, affiliated to the Durham University, which has turned out coloured students of distinguished ability. My friend Mr. Blyden, author of 'Christianity, Islam, and the Negro Race,' is a distinguished leader of the higher culture among the negro race.

The capabilities of the coloured races are nowhere seen to greater advantage than at Sierra Leone. They supply the official staff of the Government. A coloured barrister of marked ability is the leader of the Bar, and makes a professional income of 3,000 . a year.

The day seems drawing near when it will be no longer necessary

Sientr Lerae
centres of this business. The imports are mainly Manchester goods and spirits. The trade has fallen off in recent yoars owing to the constant warfare among the tribes bordering on the colony.

The greatest excitement prevalled in Sierra Leone at the time of our risit. An experlition was being sent to punish a neighbouring tribe for frequent deeds of violence to British subjects. It, achieved a rapid success. The forces engaged consisted of the men of the West India regiment and some seamen of the ships. Sir Francis de Winton was in command, supported by Major Piggott and Captain Brown. Sierra Leone is the headquarters of the West India regiment stationed on the West Coast of Africa. Their number is 400 . The barracks are a large and airy range of buildings, in a commanting situation on the leights above the town.

We breakfasted with the Acting Governor. An old fort lias been adapted as the official resitence. Its thick walls, originally built as a defence against the buflets of an enemy, give some protection from the heat of the African sme. The wide ramparts aftord a shady walk, commanding lovely views of the town and harbour beneatli, and the noble amplitheatre of mountains above. Sierra Leone would be delightful but for its climate and the fevers which it brings.

The 'Sumbean' left Sierra Leone at sumset on November' 5 th under steam. The North-cast Trades were picked n£ in latitude $11^{\circ} \mathrm{N}$. A call of a few hours was made at Porto Praya on November 19th. The French frigate of instruction for cadets, the 'Iphigénie,' a licarily rigged ship of 4,000 tons displacement, laad anchored on the previous day. Porto Praya wears the air of decay so commonly observable in foreign settlements under the Portuguese flag. The comntry is fertile, but progress is checked by the great weight of taxation, the public income beng misapplied in keeping the unemployed in mprofitable idleness. We noticed a considerable number of abte-bodied men hoeing weets in the public square.

We found three kind Englishmen leading a life of exile, in charge of the station of the West African Telegraph Company. St. Vincent, the onty island of the Cape de Verdes which has any trade, is a coaling station much used by steamers on the South American route.

On the day after leaving Porto Praya the 'Sunbeam' łay becatmed uncler the fee of St. Antonio. The anchorage used by us in i $8_{7} 6$ was in view, as was also the honse and plantation of which a

Baryue Loveto
drawing is given in my dear wife's ‘ Voyage in the Sunbeam.' There were many sad reminiscences as the former track of the 'Sumbeam ' was crossed. On November 2gth, without warming from the barometer, a strong gale commenced from the east, and lasted without intermission for four days. Uuder low canvas and close-liauled, the 'Sunbeam' gallantly struggled forward, making i 30 linots, on November 2gth, and on the three following days 112,57 , and 92 knots respectively. While hore-to in this gale the canras was severely punished. All the lower sails were more or less damaged, and sail was reduced to storm trysails. Two large barques were passed lying-to unler lower main topsails and mizen storm stay. sails. At dawn on December and Fayal was sighted.

The gale was blowing dead on shore at Horta, and it was preferable to run for shelter under the lee of the island. As we closed the land, grand effects were produced by the clouds and mist driving before the gale down the green slopes of the mountains to the dark cliffs of lava and luasalt, on which the mighty surges of the

Atlantic were broaking into foam. Late in the aftemoon of December and the 'Sumbeam' gained the northern entrance to the channel whicl divides Fayal and Pico. An attempt was made to reach Hlorta, but it was found that a heavy sea was running into the anchorage. It was a pitcliy night, and we determined to wait ontside till daylight, standing across to Pico under steam for shelter from the wind and sea.

At dawn on the 3 rd the moon was still shining on the nortleern face of the noble mountain, towering in solitary grandeur to a height of 7,800 feet. The snowy peak stood up from its mantle of clonds, and took the rosy hues of the morning. An hom's steaming carried us into the anchorage at Fayal, where we remained through the day of December 3rd. The passage from Sierra Leone to Fayal had been accomplished, with adverse winds during a considerable part of the voyage, in $16 \frac{1}{2}$ days, 2,005 knots being covered under sail at an average speed of 6.3 knots, and 460 miles under steam at an average speed of 6 linots.

We found several sailing vessels at anchor in the roadstead of Horta. One British vessel lad come in for provisions, another to repair a damaged rudder. A barque hailing from Boston was one of a line which carries on a regular service under canvas between the Azores and America. They depend chiefly on passengers, who make the cruise for the sake of health. The Norwegian flag was

represented by one most crazy wooden ship, 70 years old, and ly another of nearly equal antiquity, and in a like condition of unseaworthiness. The captains of both the Norwegians were hoping that the surveyors might condemm them as untit for further service.

Fayal offers especially faronrable opportunities for the obsequies of an mseaworthy ship insured beyond lier value. The danger to life from the attempt to navigate in ressels no longer fit to contend with storm and tempest can only be remorer by compelling the owners to bear some share of the pecuniary risk.

The local prosperity depends mainly on shipping. Business is on the decline. The opening of the Suez Canal, the introduction of powerful iron and steel built ocean liners, which suffer comparatively little from the effects of heary weather, and, as the people of Fayal allege, the legrislation promoted by MIr. Plimsoll, which has withdrawn their best customers, the weakily and unsounl ressels, from active service at sca, have combined to produce a marked diminution in the number of ships calling at the port. The whalers under the United States flag still make it their hearlquarters in the summer season. During the present year nine have
been seen at the anchorage at the same time. Exciting chases in pursuit of the sperm whale sometimes take place in the channel between Fayal and Pico. Numerous whale-boats are kept on the island, and are instantly lamehed when a whale is seen near the shore. A breakwater is now in progress at Horta, but the work is proeeeding with the customary festina lente methor of the Portuguese.

Having taken in water and provisions, the royage was resumed on the evening of December 3rd, with a favourable wind from the SS.E. At midnight the wind shifted suddenly to the north-east, and on the following morning the 'Sunbean' bore up, belore a severe gale, for shelter under the lee of Terceira. Late in the day the veil of lowering clouds was drawn aside, and the sun descending to the west, lighted up the landscape with a flood of golden light.

Terceira is of volcanic formation. Its lighest ridges attain an elevation of 4,000 feet. The crests of the hills are clotleed with forests of pine and rich pastures. At a lower level the indications of laborious cultivation are seen in range upon range of terraced gardens and vineyards. The island is densely inhabited, and the numerous white houses give an air of cheerfuness and prosperity to the scene, which recalls the more familiar charms of the Bay of Naples and the Straits of Messima.

On December 5 th, the gale subsided to a calm, and the voyage homewards was commenced under steam. In a few hours the engines broke down, and sail was made to a light breeze from the nortll-east. On the succeeding days favourable winds were experienced fron the westward. On the irth the wind shilted to the south-east, accompanied by drizzling rain and fog, which rendered observations impossible, and which continued until the Scilly Island lights were sighted in a fortumate lifting of the haze, on the evening of the 12 th. The run from the Scilly Islands to Spithead was made at the rate of $11 \frac{1}{2}$ knots an hour, before a south-westerly gale.

The total distance from Fayal, including the call at Terceira, was $\mathrm{I}, 4 \mathrm{t} 0$ miles, of which sixty only were under steam. The average speed was 7 knots. The 'Sunbeam' entered Portsmouth llarbour at noon on December 14 .

## PART II.

Total distance under steam and sail, 36,466 miles.
(B) THE CRUTSE OF THE 'SUNBEAM.

Reprinted from the 'Times' of December i5, 1887.
The 'Sumbeam' reached Portsmonth Harlour on TTednesday after her long royage of 36,000 nantical miles among the Lritish Possessions in all parts of the world. We are enabled to give the following short account of this rexy interesting cruise.

For certain duties of the nary, such as protection of the reveme, supervision of fisheries, the police of the Pacific, instruction in pilotage, small ressels are redured which will be thoronghly seaworthy, capable under sail of taking finll adrantage of the winds, and in caluns making fair speed undex steam with a low consmmption of fuel. It is believel that such a trpe is represented in the 'Smbeam,' and that her performances during an extended cruise recently completed maye be of interest in a naval point of view.

The principal dimensions of the hull and spars of the 'Sunbeam 'are as follows:-Length between perpendiculars, 137 lt ; beam, 27 ft .6 in ; depth of hold, 13 ft .9 in . ; displacement in tons, 576 ; sail area in sfuare yards, 9,200.

In fourteen years of active cmising in all parts of the world the sea. worthiness of the 'Simbeam' has been thoroughly tested. Neither when lying to nor scudding las she ever shipped a green sea. She can be worked with a complement of eighteen seamen and three stokers. She can carry an armament of machine and ruick-firing gans.

The consnmption of fuel may be taken at three tons in twenty-fom hours for a speed of $7_{4}^{3}$ knots; four tons for eight knots; and seven tons for nine knots. The measured-mile speed was $10: 27$ knots. Seventy tons of coal can lue carried.

Under sail alone in the most favourable circumstances 13 knots is an extreme speed. Three hundred knots have been made good on a few occasions, with some contributions to the day's rum from current. On a passage the average distance made good is 1,000 miles a week, of which one-third is under steam.

The recent cruise of the 'Sumbeam 'inchuded India, the Eastern Archipelago, and Anstralia. The outward voyage was by the Suez Canal and the return voyage by the Cape. On leaving Portsmouth calls were made at Cowes and Southampton, the departure being finally taken from Plymouth on the igth of November, Gibraltar was reached on the 26th of November, Algiers on the ist of December, Malta 5th, Port Said Ioth, Assab Bay igth, Aden 2 ist of December, and Bombay 3rd of Jannary. From England fine weather was experienced as far as Algiers. Thence to Port Said the winds were strong from the westward, with an interval of calm lasting nearly two days. In the northern portion of the Red Sea fresh northerly winds prevailed. On leaving Aden the north-east monsoon blew with such force that it was decided to make a stretch to the eastward mider sail. As the distance from the Arabian coast increased the monsoon gradually abated, and a course was laid under steam direct to Bombay. On nearing the coast of India the monsoon became more northerly, and the 'Sumbeam' fetchet Bombar under sail. Having given a general description of the weather, the records of the log-book may be summarised as follows :-Distance under sail, $4,0,6$ knots ; distance under steam, 2,830 knots ; the arerage speed in each case being within a fraction of seven knots.

On the first section of the royage the average speed of 1,000 miles a week was maintained with remarkable uniformity. Bombay was reached on the precise day which had been estimated before leaving England.

After a few days at Eombay the 'Sunbeam ' proceeded to Kurachee, and remained in its salulurious climate from the roth of January to the 7th of February. Lord Brassey and his family in the interval made an extended journey in North-Western India. The retimn passage from liurachee to Bombay, faroured by a brisk north-east monsoon, was made entirely under sail in less than forty-eight hours, the distance covered on the 9th of February being 268 miles. The Queen's Jubilee was celebrated during the second risit of the 'Sunbeam' to Bombay.

The voyage was resumed on the 22nd of February. Touching at Jinjeera and Goa, Colombo was reached on the 5 th of March. The entire distance from Kurrachee to Cape Comorin, including both entering and learing port, had been accomplished under sail. The monsoon was not felt on the Malabar coast. From Dombay to Cape Comorin the passage was made with the daily sea breezes, blowing fresh in the afternoon, followed by calm prolonged through the night and the first part of the day. Calling at Trincomalee en routc, the 'Sundeam' next proceeded to Burmah. March is a busy season in the rice trade, and a noble fleet of sailing ships was assembled at Rangoon.

After learing langoon the 'Sunbeam ' proceeded to Borneo, tonching at Monlmein and Singapore. The Sarawals river was reached on the 3 de of April. Following the northem and eastem coast of Borneo, Labnan, Brunei, Findat Day, Sandikan, and larvel Bay were successively visited. Macassar was reached on the 19 th of April. In the section of the voyage extending from Bombay to Fimrachee, and thence by the route which has been descrilied, the tutal distances covered were 4,695 lnots under steam at an arerage speed of $8 \cdot 3$ linots, and 2,509 lnots under sul at an average speed of $5 \cdot I$ linots.

The 'Sunbean' left Macassar on the evening of the zoth of April The Indian Ocean was entered from the Allas Straits, which divides the islands of Lombok and Snmbawa, on the 24tll. A heary swell was encountered from the east, cansed, as it was afterwards leamed, by a cyclone which did great danage to the Heet engaged in the pearl-fishery on the north-west coast of Australia. The South-east Trades were pucked np on the 25th, and blew steadily until the 3rd of May. On the 5 th of May a gale, with furions squalls, was experienced from the south-west. It was followed by a calm, and afterwards by westerly winds. Albany was reached on the 8th of May. The 'Sunbeam' again put to sea on the 17 th of May. A week was occupied on the passage to Alelaide. In the great Australian Bight nortl-east winds were encometered, grabally shiltug to the west, and blowing a gale during the last two days lefore reaching port. On the day hefore the arrival at Adelade the distance of 265 knots was made good; sail having been much rednced for several hours to avoid ruming dowe on Kamraroo Island in thick weather at night. Between Macassar and Aldelaide a distance of 3,256 knots was covered unter sail at an arerage speed of 6.3 linots. The distance minder stenu was 60 linots and the arerage speed seven linots.

From Adelaide the 'smbean' made a smart rm to Mellourne, encountering a heavy gale with furions squalls olf CapeOtway. After a lons stay at Melbourue the royage was restmed to Sydney, Newcastle, and Lisisbane.

On learing Erishane the passage was taken insude the Great Darrier Feef without the assistance of a pilot. Fourteen lmodred unles of this dificult navigation were traversed under sail. The 'Sunbean' touched at all the ports of Northern Queensland, and between Cooktown and the Albany Pass anchored in the three intervening nights ander the lee of the coral reefs. A somewhat prolonged stay at Thursday Island was liroken by a visit to Darnley Island and other anchorages in the Torres Strats. Port Darwin was reached on the 8th of September. Detween Alelaide and Port Darwin the distance mder sail was 3.31 f lmots, and the average speed $7 \cdot 2$ knots. The distance under steam was g66 knots, and the average speed 65 linots. On arrival at lort Darwin the 'Sunbean' had completed successfully the circumavigation of the Austratian continent. Unhappily the cruise, so auspicionsly commenced, ended with that painful event which has cast a dork shadow over all its other memories.

From Port Darwin to the Cape of Good Hope, and thence to Sierra Leone, the voyage lay for the most part within the zone of the South-east Trades. Rodrignez Island was sighted on the 26th of September, and Mamitins was reached two days later. The passage from Port Louis to Algoa Bay occupied II days. To the sonthward of the Trades, off the coast of Natal, a short but severe gale from the south-west was encountered. The gale was followed by a fresh breeze from the east, which carried the 'Sunbeam ' rapidly to the westward from off Gordon Bay, her landfall on the coast of Africa. A day was spent at Port Elizabeth, and two days of rapid sailing before an easterly wind brought the yacht into Table Bay on the morning of the 15 th of October, just in time to grin the anchorage before one of the hard gales from the south-east set in which are not infreguently experienced at the Cape. The construction of a noble break. water has given complete security to the anchorage off Cape Town.
between Port Darwin and the Cape the distance covered was I, 047 knots mider steam and 5,622 knots under sail; the average speed under steam and sail was exactly eight knots. In the fortnight from September I 3 to 27, 3,073 knots, giving an average speed of nine knots, were covered under sail alone, with winds of moderate strength. Balloon canras was freely used.
'The 'Sunbeam' left Cape Town on the 24 th of October. She touched at St. Helena on the 3rd of November, Ascension on the 7th, and Sierra Leone on the 1 fth. In this section of the voyage the distance moter canvas was 3.327 knots, the arerage speed 777 lnots; and the distance under stean 289 knots, with an average speed of seven knots. The South-east Trades were light, and balloon canvas again proved extremely serviceable.

The 'Sumbeam' lel't Sierra Leone at sunset on the I 5 th of November, under stemm. The North-east Trades were picked up in latitude in deg. N. A call of a few hours was made at Porto Praya on the 19 th of November. On the following day the northern islands of the Cape Verde group were sighted. During the 21 st and $22 n d$ of November a great number of sailing ships were passed, outward bomd. The Trades were interrupted by a calm on the 24 th of November and stopped finally on the 27 th. On the following day, without warning from the barometer, a strong gale commenced from the east, and lasted without intermission for four days. Under low canras and close hauled the 'Sunbean' gallaztly struggled forward, making i 30 knots on the 29th of November, and on the three following days 112,57 , and 92 knots respectively. While hove-to in this gale the canvas was severely pumished. All the lower sails were more or less damaged, and sail was reduced to storm trysails. Two large barques were passed lying-to under lower main topsails and mizzen storm staysails. At dawn on the 2nd ol' December Fayal was sighted.

Shelter was oltained for 24 hows under the lee of the island of Pico, and on the following day the 'Sumbeam' anchored off Horta, the port of Fayal. The passage from Siena Leone to Fayal had been accomplished,
with adverse winds during a consilerable part of the voyage, in $16 \frac{1}{2}$ thays, 2,005 knots being covered noder sail at an average speed of 6.3 lnots, and 460 miles mader steam at an average speed of six knots. Having taken in water and provisions, the royare was resumed on the evening of the 3rd of December, witl a favourable wind from the sonth-south-east. At miduight the wind shifted suddenly to the north-east, and on the fullowing nuorning the 'Sunbeam' bore up before a severe gale for shelter under the lee of Terceira.

On the 5 th of December the gale sulbsided to a calm, and the voyage homewards was commenced under steam. In a few hours the engines broke dom, and sail was made to a light breeze from the north-east. In the succealing days favourable winds were experienced from the westward. On the ith the wind shifted to the south-east, acconpranied by drizzling rain and fug, remdering observations impossible, which continued until the Scilly Island lights were sighted in a fortunate lifting of the haze on the erening of the I2th. The run from the Scilly Islands to Spithead was made at the rate of $1 I \frac{1}{2}$ knots before a south-westerly gale. The total distance from Fayal, including the call at Terceira, was $1,4+40$ miles, of which 60 only were under steam. The average speed was seven knots. The 'Sunbeam' entered Portsmonth Harbour at noon on the ifth of December. The total distance covered during the voyage was 36,709 natical miles, 25,800 mider sail and 10,909 under stean. The runs uncler sail only included 39 days over 200 knots, 15 days over 240, seven days over 260 , three days over 270 . The best day was 282 knots. The total consumption of coal was 330 tons. Thourh the quality taken in abroad was in many instances inferior, an ayerage distance of 33 linots was steamed for every ton of coals consumed.

When the 'Smbeam ' reached the Cape it was found that the tubes of the boiler had been seriously injured by the great varieties of finel burnt during the voyage. The pressure of steam was consilerably reduced, with a corresponting loss of speed. On leaving Terceira the hoiler lroke down completely, and for the remainder of the voyage the winds were the only resource.

The erew, consisting of 24 men in morious ratings, have behaver in a highly cretlitable manner. The offences when in fort have been few, and at sea every duty has been carried out in a manner worthy of Dritish seamen. Three men joined at ling George's Sound. They lad been sentenced to a short term of imprisonment for insubordination on board a yacht returning from a cruise in Anstralian waters. To oblige the Government liesident, Lord Brassey consented to receive these men on board on trial. Better men it wonld not have been possible to obtain had they been recruited through the usual agencies.

## PART III.

## SPEECHES IN AUSTRALTA, TO THICH SPECIAL REFE. RENCE IS MADE IN THE LAST JOURNAL OF LADY BRASSEY. REPRINTED FROM THE AUSTRALTAN PRESS.

## ROYAL GEOGRAPHICAL SOCIETY OF AUSTRALASIA.

Adelatide, May 27 t , 1887.
The annual meeting of the South Anstralian Branch of the Royal Geographical Society of Anstralasia was held at the Society's rooms, Waymonth Street, on Friday aftcrnom, May 27th. Sir Samuel Davenport (Vice-I'resident) occupied the chail.

The ordinary lusiness of the meeting having leen conchoted, and speeches of welcome haring been delivered by the Chairman, Lovd Brassey said: 'You have spoken of the voyages that have heen taken on the "Sunbeam" as adventures not mworthy of those old Northmen in whose distant fame England and Anstrulia equally shave. I cannot take to myself the credit of being an adventurer in the same sense in which our northern forefathers were alventurers. I will not speak of the morality of their proceerings, but simply of the feats of navigation in which they engaged. Those northern forefathers of ours were not provided with all the informa. tion which geographers and explorers have given to the narigators of modern days. Consider for a moment the hazards and the difficulties encomentered by Captain Cook. Going alout as I do with all the facilities afforded by the most recent discoveries in science, and still finding the art of narigation not made so very easy, I confess that when I look back to a great man like Captain Cook, who entered these seas with no information, and with no other resource but his general semmanship and knowledge of narigation, my admiration of his achievements grows continually stronger. I particularly rejoice that so excellent a society as this has been established in Adelaide. I mederstand it is a society collateral with others which exist in the other colonies of Australia. It seems to me that you are doing a most valuable work. Exploration mnst precede settlement. It is a necessary process, by which alone you can arrive at the proper settle-
went and development of this country. A previons speaker expressed deep satisfaction that the control of this fifth continent had derolved on the Anglo-Saxon race. In coming to these colonies I tonched at two seaports, which, by the contrast they present, bronght forcilly to my mind the adrantage of a liberal policy in dealing with commerce. The two ports to which I refer are Singapore and Macassar. Singapore dates from some fifty or sixty years ago at the most, but it has grown to a magniticent emporim of trade ; and how has it reached that position? By decharing on the very first day that the protecting flag of England was hoisted that equal privileges should be given to men of commerce to what. ever nationality they might belong. When we turn to Nacassar - a place which might be not unfairly compared in regard to facilities of position with Singarore-we fund the Dutch determined to close it to the enterprise of every foreign nationality. The result of this seltish spirit is that Macassar presents all the indications of languor and decay, while Singapore presents all the indications of prosperity and wealth. I iefore I sit down. mar I refer to some portion of the report, in which reference was made to recent spheres of exploration in which the society is interested ? You refer to the exploration of New Guinea. There are some delicate questions comected with New Guinea, on which I certainly shall not now tonch. but I may say that what I have seen of the Wond has tended to impress on my mind most deeply the conviction that latitude does fix in a rery decisive manner a limitation mpon the sphere of the AngloSaxon race for direct phrsical labour. I feel conrinced that moness you have temperate weather, such as we are now enjoying in Aldalade, to make $\quad$ por the hot season, the Anglo-Sason race camot mulertake ontdoor labour. You may direct and administer it fou may be able to go throngh figures in the office; but, to wout into the tield to dig and delre is impossible. Despite this, howerer, the tropical comontries may prove of inestimable benefit. Althongh ther mas not be suitable for the emplos ment of the Anglo-Sarms as field labonrers, it dues not follow that they are not to be of qreat benefit-even a direct benefit-to our own race in regard to the employment of labour. If we can succeed in leveloping these tropical regions by employing the latom of the tropical races, the increasing prosperity will serve to extend the markets for the protucts of Anglo-Saron labour in comatries adapted to our race. A visit to Australia must be a matter of deep interest to every patrintic Englishman. In the old country we are liecoming more and more sensille that it is the highest statesmanship to keep together every limb of the British Empire. There is an increasing affection to the colonies in England, and an increasing pride in their advancement. National sentiment and enlightened selfinterest will bind and keep us together. so that not one limb of the great Eritish Empire shall be severed. I have said more then strictly beloness to the motion, but I was prompted to do so by my friend in the chair. I move a vote of thanks to the Chamnan.'

## ADELAIDE CHAMBER OF COMMERCE.

Adelaide, June 1st, 1887.

The hall of the Chamber of Commerce was crowded on Wednestay afternoon, it having been amounced that Lord Brassey would deliver an nddress. The andience included most of the prominent merchants of the city, and others interested in commerce, and Dr . Kennion, the Anglican Bishop of Aclelaide. Mr. A. W. Meeks presided, and said that a special meeting of the Chamber had been called to hear Lord Brassey give an address on mercantile affairs. The Committee knew the great interest he (Lord Brassey) had taken in all matters refering to maritime and nercantile affars, and the voyages made in the 'Sunbeam' had made Lady Trassey well known. Lord Brassey's father was well known in connection with great public works.

Lonl Brassey said: 'Your Chairman did not sive me any information as to the kind of subject which I should address you on, but I presumed that the Chamber of Commerce would be most interested in the labour question.
' The policy to be pursmed by the Govermment of this colony in relation to the admission of Chinese or coolie labour into the Northern Territory is, I understand, among the pressing suljects of the hour. Approaching the subject without prejudice or bias, it does not seem difficult to deter. mine the principles by which the action of the State should be gridet. If we have faith in the superior qualities of our own people we shall do well, even at the cost of considerable delay in material development, to reserve for our own race those parts of the cometry in which they can succeed, in which thes can not only labour, but preserve and perpetnate from generation to generation, the qualities which have made them great. While the policy seems clear in relation to regions adapted to the physical qualities of our onm race, it seems not less clear for the regions beyond. To refuse the aid of the tropical populations for opening ip the resnurces of conntries where the Anglo-Saron race cannot perform manual labour, and still less establish a permanent settlement, is not to advance but serionsly to injure the true interests of this colony. By opening up portions of your Northern Territory with imported labour, a new ontlet will be afforded for the investment of your capital, and a new market created under your own control for the sale of your manufactures.
' I pass to another subject which must be dealt with, not by legislation, hut by mutnal gool feeling and by common sense. Wherever business is carried on upon a large scale, difticulties must in the nature of things be anticipated in the relations between labour and capital. Each of these elements in the operations of industry mar le helpless without the other, but when we pass from the stage of production to the appropriation of profits the conflict of interests is inevitable. Strengthened by the experi-
ence in the old comtry, I wonld eamestly recommend for all your larger trades voluntary comets of arbitration and conciliation. If we go back to that dark time in England which followed the close of the long strugrife with Napoleom, the hostility of classes was seen in all employnents, and in mone was it more conspicuons than in the collieries. A hapry change has passed over the spirit of the scene. Nowhere has the method of arlitration been more successful than in Durham and Northmberlant. A scale of wages for miners las been agreed upon, varying with the price of coal, and arbitrators lave been found to apply the scale to the comitions of the time, in whose justice employers and employed lave implicit contidence. Among these raluable men Mr. Darid Dale is an eminent exanuple. He and other men of hishigh stamp and quality-men such as liupert liettle, Mundella, and Frederic Harrison-ocenpy a tiony noble prosition in relation to labom questions. They have won the contidence of the masses, not by trucking to prejudices, not by disarowing the sound and well-tried rules of political economy, but by listening and by explaning with unwearied patience, by showing a sincere sympathy with the working classes, and les taking a deep interest in their welfire. The mention of these distinguished names leads me to the adjustment of difticulties by Conts uf Conciliation. They may lue described as comnittees consisting of eunal mmbers of employers and workmen, appointed to mect at fremuent intervals, and to discuss in a friendly open way, and on terms of perfect equality, all the questions in which there is a possiblity of contlict. The practicalility of the plan has been proved by experience. It is inpossible to exagrerate its gond effects. By frequent and friendly neetiners knowledre is acruired on both sides which cond be grained in no other way, and suspicion is changed to sympathy. I hope that no ban influences of false pride on one sile, or of ummerited distrust on the other, will deter the employers and the employed of South Anstralia from rapilly lringing into operation the excellent method of averting disputes, which Comers of Conciliation both in England and on the Continent of Emope hare never failed to provide.

- Free trade and Irotection are topics which wide-spread depression has thrust into prominence of late. The present Government in England, in deference to the demands of Protectionists, appointed a lioyal Commissim. Its members were the representatives of conflicting views, and after an exhaustive inpuiry they selarated without changing the opinions with which they enterel unou their labours. We may draw the inference that the subject is not quite so simple as the most eamest partisans in the controversy would wish ns to believe. For the Cnited Kinglon 1 an a convinced Freetrater. I admit that the old comitry, where half the population subsists on imported food, which must be paid for iu expurted goods, is not on all fours with a colony capable of producing in abondance all the necessaries of life for a population infinitely more mmerons than at present exists within its borders. Dut while the conditions are difierent the fact remains that moder a protective system customers are precluded
from buying in the cheapest market, agriculture is heavily charged for the benefit of a less important interest, and labour artificially diverten fiom those spheres of industry in which it might be employed to the greatest advantage. Certain it is that cycles of commercial depression would not be averted, but rather prolonged and aggravated, by a policy of protection. Impressed with the weight of evidence on this point, the recent Royal Commission of Trade declined to recommend Protection as a panacea for commercial depression in the United Kingdom, and I hesitate to recommend it to the Chamber of Commerce in Adelaide. While, however, I would deprecate the imposition of burdensome import duties for the purposes of Protection, I fully recognise that moderate import duties are necessary as a means of raising revenue. The first duty of every Finance Minister is to obtain an income for the state by the methods which are the least inksome to the taxpayers. In new comntries, not exporters of manulactured goods, import duties are miversally found to be the least irksome form of taxation. If under a moderate tariff industries are established earlier than would le possible withont some Protection, the incidental adrantage is secured of raried employment for the people. Where all depend on the same pursuit or the same industry, an unfasourable season or a fall in price may cause a general depression. There is less risk of universal melancholy and decine when the public wealth is derived from varions and independent sources. My conclusion is against import duties on a high scale, levied, as in the United States, for the parpose of exclusion. I recognise the necessity in certain circumstances for the imposition of import duties on a moterate scale for the purposes of revenue.
'I hase one more remark to offer in connection with the latour question. Among the many gratifying things which I lave seen in your colony, nothing has exceeded your system of education. I congratulate your people, and I honour your Govermment for their efforts in the cause. It may not. however, be superfluous to refer to that tendency to look disparasingly on manual labour, which is so freyuent and fatal a result of the rery perfection of edncational work. Education may become a curse rather than a boon if it relaxes that physical energy which in all commonities, and especially in a new comntry, is the indispensable condition of progress. It has been truly said by the poet Browning :-

> The honest earnest man must stand and work, The woman also--otherwise she drops At once below the dignity of man, Accepting serflom. I count that Heaven itself is only work To a surer issue.

Society must take to itself the responsibility for the preference given to clerical over mechanical employments. We have not done our duty in
giving to onr skilled workmen that social rerogntion which is their due. But 1 an hapry to say that in the old comotry we are decidedly in the way of amendment. The retmon of working men in greater numbers to the House of Commons has been proluctive of much goon in a social point of view.

- In conclasion, it miry not be imapropriate to the occasion to dwell for a few moments on the inflnences of honest trade in raising the stantard of civilisation and elevatiog the character of men. The prosperity of commerce dependsom intelligence, on monatry, hat above all on character. Clevemess may sometimes win a stroke. There have been financier: in the City of London whose carcer might have heen painted in the lanorage apphed loy Earl Russell to Mirabean-"His mind raised hinn to the skies; his moral character chained him to the earth." I can 'Inote 1 mo instance in which men of this stamp have achieved an enduring success. It is not the men whose craft and cmming people fear, bat the men in whom they trust and whom they love who in the end sncceerl. It is the ofthee of commerce to sive to the world perpetnal illustrations of the homely bat ennolling trath that honesty is the best polics. Commerce pats lefore those engaged in it many tempations. The good man of business must rise superior to them all, and thus it is that in his life and work he can do so monch to commmicate adrantages, to adrance material welfare, and to raise the tone of morals. Snch. and mot less, is the mission of the merchant and the trader. For myself, 1 am pond to know that 1 am the son of a contractor for pablic works, whose gond repatation was the best part of the heritage which descended to his sons.'

Melbocise, Juxe 25 tif, 1887.
A complimentary dimer was temtered to Lord lirasser, K.C.B., the hon. treasurer of the lmperial Federation Leagne, ly the members of the Tictorian branch of the Leagne, at the Town Hall wis Satmoday erening. The banquet was laid in the comeil chamber, and about eighty gentlenen sat down to the tahles. 'The chair was occuped by Mr. G. D). Carter, M.L.A.. fresident of the Tictorian hanch. On his right were the gnest of the evening, the Promier (Mr. Dancan Gillies), and the PostmasterGeneral of Queenslam (Mr. M•Domald Paterson), and on his left the Mayor of Melborme (Conncilor Cam), the l'xesident of the Legishative Counch (Sir James Mac Lain), Mr. Justice Mehb, and Mr. Nicholas Jitzgerah, M.L.C. The compray included a large mumber of other pomment citizens, many of then not being members of the Learne. In oriving the tuast of "The Queen,' the Chaiman sail that they could not better have given expression to their loyalty to Her Majesty than by meeting to adrocate the unity of the empire over which she reigned. The assemblage of representative citizens for such a purpose formed a most appropriate conchasion to those rejoicings in which ve had so hilpily shared during the week of Jnbilee.

The toast was received with enthusiasm, and a verse of the National Anthem was sung.

The Chairman gave the toast of 'His Excellency the Governor.'
The toast was received with cheers.
'The Chamman next proposed the toast of 'Imperial Felleration.' They had no definite views at present on the subject of Imperial Federation. The point to which they had got was this, that they desired to see tho cmpire mited as one inseparable whole. We were bound together by the ties of kindred, kith, and kin, and he even dared to hope that the view expressed by Mr. James Anthony Fromle when he was here would he realised, and that there wonld eventually be a union of the Englishspeaking peoples of the world for the purpose of motnal defence. On behalf of the Victorian branch of the Imperial Federation Leagne, and of the colony generally, he offered a cordial welcome to Lord lirassey, and trosted that he would carry away with him pleasant recollections of lis visit to Victoria.

Lord Brassey said: 'As the treasmer of the Imperial Ferteration League established in London, it aftords me the greatest gratification to be your gatest this evening. Our worls in the old comtry wonld be of little value, unless it were approved and supported by public opinion in these great and growing colonies. Speaking on belaalf of the Imperial Federation League in London, we have no cut-and-tried plans which we are andions to pat furward. We see great difticulties in arriving at any solution of the duestion of federation ; hat with their growth in population, in wealth, and in resources, we anticipate that we slall see more and more a manly resolve on the part of the colonies, not only to make provision for their own tefence, but to share in the responsibility of the defence of the mited empire. With your increased participation in the hurdens, you must necessarily receive an increased share in detemining the pricy of the empire, and thus we see loming in the not fir distant future the necessity for further consideration of the problem of federation. We do not desire, we should deprecate, a hasty solution. W'e helieve that probably the wisest course will be to deal with circmmstances as they arise. We wisl to pave the way by timely and temperate discussion. The views of the fomders of the Imperial Federation League were well put, in one of his latest speeches, hy a grand statesman of the old comntry, Mr. IV. E. Forster, the first president of the League, who said :-"The idea of the permanent mity of the realm, the duty of preserving this mion, the blessings which this preservation will confer, the danger and loss and disaster which will follow from dismion, are thoughts which possess the uinds of Englishmen both here and over the seas. These thoughts are expressing themselses in deeds; let this expression contime ; at present it helps our canse fiar more effectually than any possible scheme." I am not one of those who ever doubted the loyalty of the colonies to Old England. If any Englishmen were in donlat as to the feeling of the colomies towards the mother comotry, the events of the past week in this noble city of

Melboune womd dispel effectnally any uncertainty. On Thestay last we satw your militia march past like a wall, to the thme of "The oft loulds at Ilome." That may be a somewhat homely melory, bint it comosed a twachiner sentiment to the spectator from the old comatry. On the forlowmon day a ball was given at Govermment Honse, an entertainuent the splendour of which could havdly have been exceeted in any capital in Enrope. That entertainment owed its character not merely to the graceful hospitality of the host and hostess on the occasion, but to the enser desire of those who were present to seize the ocrasion for showing their attachment to the Queen, in whose honour and in whose name that hall was given. On the following day in vour Parlanent liuldings, which, by the beanty of their desisn and the amplitude of their proportions express four greatness in the present and anticipate vour growth in the future, a nohle hall was iledicated, with a generons spirit of loyalty, to the name of the Queen. On the evening of the same day we attender a concert at which thousands of your citizens were present. On four several amd separate oceasions the National Anthem was sung, and on each oceasion with increasing fervour. On the following day 30,000 children were hroncht together, trained to utter the sentiments of their parents in that National Anthem which they sang so well. In journeving in some of the remoter parts of this colony, it was tonching to hear "Gorl Save the Qucen " sung at every opportunity ly the little chillien, who are thas early trained in the sentiment of lowalty. If we pross from these momentary inculents of the week to circmonstances of a more permanent ant perhaps more serions character. what are the cunclusions which an intelligent traveller from the old country may draw, with reference to the ties which bind the colomies to the mother comatry? If he looks at your society and yom family life, he finds the same manners, the same bathits, the same ways of viewing circumstances and things. Your English tastes are shown in the honses which you buik, the clothes which you wear, the fool which rou eat, and in the groods yon bry. The national character of the Anflo-Saxon race is shown as strongly here as in the mother country in four spirited devotion to manly spurts and pastimes; ant when we think of the wther ties that bind us-a common faith, a common literature, the same dear mother tongne-what other conclusion can be drawn by the intelligent traveller then this-that the ties which bind the colonies to the mother country are stronser than those which any legislature or statesmanship conld contrive, and that they are inherent in the immermost life of the people. Gentlemen, yon may call the union which binis us an ompire, you may call it a federation, yon may call it an offensive and defensive alliance of the closest kind-you may call it what you will-the nume is of subordinate consergence while mutual sympathy and sentiment retain that linding force which, as we have seen in this Tulbilce week, you are all so seneronsly prepared to acknowledge in pour relations with the old country. Perhaps I may say a few worls on this occasion with reference to the mutual advantages which are afforded by our remaining
torether as members of a mited empire. There was a time when the connection was less valued than it is at present by some of the eminent statesmen of the old country. Since the days of which I speak great changes have taken place. The map of Emope has been reconstructed on the principle of the recognition of nationalities. The Germans have made themselves into a nation; the Italians have made themselves into a nation. Our tight little island is small indeed in area, in comparison with the great teritories of Continental Europe. It is small in area, but if we and the children descended from us-these great English-speaking nations which have overspread the world-remain united tugetler, we are the first of the nationalities of Europe. I think there are sume indications tlat the maintenance of the mity of the British Emprire may be less difficult than might perhaps in fomer days have been anticipated. Science has done much to shorten distances; it has given us the electric telegraph, an improved and improving steanship, and railways. As the colonies grow in importance, it must necessarily follow that the Imperial policy will be concentrated mure and more upon oljects which are common to them and to the mother comntry. The foreign policy will be directed to the maintenance in security of the commmaications between the mother comntry and the colonies, an olject of common interest to yourselves and to ourselves. Looking formard to a mot very distant time, it is evident that your growth in pophation and power will give you the command of the neighloming seas. Fow relations with India will become closer and closer, and yom will le in a position not less strong, and your interest will be as great as that of the mother country in preventiner the hoisting of any flag bostile to your own upon the ports of lndia. AII the comntries of the Dritish Empire will bold together, because it will be for their adrantage. Trade follows the Hag. While other branches of on foreign trade have been languishing, the trade with the colonies has remaned flomishing and elastic. We lend you our capital on much easier terms than we would ask if you were meter a foreign flas. We hold lefore fou in external relations the shield of a great empire. The adrantages of the present arrangement, from a colonial point of view, were bappily put a short time ago in a speech by Sir John Macionald, from which I will ask leare to quote two or three sentences. Speaking at Montreal, he sail: - We want no indepentence in this comntry, except the independence that we have at this moment. What comtry in the world is more independent than we are? We have perfect independence ; we have a Soverejgn who allows us to do as we please. We have an Imperial Government that casts on onsselves the responsibilities as well as the privileges of sellgovermuent. The may govern ourselves as we please, we may misgovern ourselves as we please. We put a tax on the industries of our lellowsubjects in England, Hreland, and Scotliud. If we are attacked, if our shores are assailed, the mighty powers of England on land and sea are used in our defence." There may lje sume who think that the mion of the empire camot le maintained, beanse it is difficult to reconcile the
impetassity of youth with the pandence of ohage. 'They think that in the impetuosity of routh, you will resent the prudence with which the mother comntry holds , yon hack. Upon a wise view of it, we find in the distinctive qualities and defects of youth and age the elements of a felicitons combination. The fither of the philusophy of history, Theneydides, has attributed to Alcibiades a great truth: "Consider that youth and age have no power moless mited; but that the lighter and the nore exact and the middle sort of judgment, when duly attempered, are likely to be most efficient." I hope that the wise policy with which the afilirs of the British Empire may be comdncted will ilhostrate the adrantage of the matrat and combined intluence of the ronng colonies and the old comony. I leel deeply grateful for the privilecre of being your guest th this vecasion, and for the presence of many emment men at your table. They have not assembled here merely to pas a complment to an individual. Ther have come to express their deep interest in the Imperiad Feleration League. I shall go back decply tonched lis the love I have seen the people of these colonies slow Old Englant, whose ireatest pride it is to have been the mother of mights nations. I cannot sit down withont acknowletging on hehalt of Lady Brassey the kinhuess which gou have shom in the mention of her name. I shall he a faithful reporter of your proceedings to my dear wile. She will greatly apprechate the kind recep. tion given to her name.'

$$
\text { Sydney, July 9Th, } 1887 .
$$

A complmencany pienic was temteren to Lord Brassey on Satumay by the public works contractors of New South Wales. The pienic took the form of a trip to the Hawkesbury River, and abont 150 gentlenen attended. Amongst those present were the Right Hon. W. B. Dalley, P.C., Sir John Robertson, Sir John Hay (l'resident of the Legislative Council), Sir William Orge, Six Etiward Strickland, Hon. Julian Salomons, Q.C., M.L.C. (Vice-President of the Executive), Hon. James Inglis (Minister of Public Instruction), Hon. F. Abigail (Minister for Mines), Hon. W. Clarke (Minister of Justice), Mr. Riley, M.P. (Mayor of Sydney), and others.

The party left Redferm in a sperial train shortly after nine o'clock in the morning, and arrived at l'eat's Ferry alout noon. At the ferry they riewed the work proceeding theve in connection with the construction of the new bridge, and then went on board Captain Muray's river-boat, the 'General Gordon,' whose course was so shaped as to allow them the opportunity of seeing some of the most picturespue scenery with which the Hawkestury abounds. On the upper deck armagements had been made for the serving of a cold collation. Mr. J. C. Carey presided.

The Right Hom. W. B. Dalley proposed the health of 'Oret distinguished grest, Lord Brassey:' In the comse of his speech lee said: 'Oux hosts on
this oceasion are men who have in the construction of the great public works of this country expended about it,000,000l. of the publie fumets duming the last ten rears. Their guest is the son of a man who had, by similar labours to those of their hosts on a gigantic scale by means of his rast and umparalleled industrial enterprise, helped largely to clange the face of the world; who had constructed some of the greatest monuments of our later civilisation in England and in India and in the British colonies, in France and in Germany, in Delgium and in Italy, in Spain, Demmark, and litussia. He was in the first rank of those benefactors of hmmanity, who perform prodigies of power in the control and management of their own private affairs, whose labours are extended over the whole world, and who leave on every shore the monmments of their own genins and the memorials of the power and resonces of their contry. For the greater portion of his eventinl life he was doing a large share of the peaceful business of Europe, and nearly everywhere throughout the empire, in the erection of sigantic public works, he was earning and dispensing tens of millions, assembling in the construction of such great works the representatives of many nationalities, so that it has been said that the curious might have heard eleven different languages spoken in the execution of the same contract. He was heightening and extending the renown of Englishmen, upholding and increasing their reputation in the eyes of foreigners, and teaching lessons of greatness and of justice to the laboumg millions of other nations. Here also in this colony he constructed some of the greatest of our public works. To the son of such a man, visiting our colons, it seemed right and fitting that our own public contractors shonld show all the homow which they could bestow now him. In welcoming Lord Brassey to this company of men of enterprise and of large undertakings, and in asking him to meet men of representative character and position in the community, yon make your compliment dearer and more preciuns becanse yon are intluenced by profound respect for the memory of his parent. Four guest, as a man who has served in great offices, and gained in a high degree the esteem and confidence of those who have known and watched his career, would have been entitled to a hearty welcome at the hands of British colonists for his own valuable and unseltish pullic services to the empire. But you have been prompted to honour, not only his personal merits and his individual labours, but the great industrial name which he bears-a name ennolled by the labour and enterprise of his father-because yon are prond to associate yourselves with the career of one who had done, as you are in your smaller way endearouring to do, much for mankind. I give you-a company of public contractors - the health of the son of the greatest of them all, the son of "Thomas Brassey.", (Cheers.)

Lord Brasser, in reply, said that he felt great difficulty in responding in worthy terms to the far too kind and flattering speech which liad been wade on behalf of his hosts. But it needed not a speech to express from a full heart his grateful aprreciation of their kindness. He tid not forget
his orgin. He was proud of it - (hemr, hear)-and he conld assme themthat if he had been spared the personal ansietics experienced by those pmployed in the execution of public works, he had a fellow-feeling for those who were encruged in that most valuable sphere ol enterpmse. The speech in whicla his mane had been introduced to them referced - and he Was glad that it did refer so largely - to the carcer of his dear lather. Be was prond to know that the otportunity was afforded to his father of performing the nseful oftice of to pioneer of civilisation thronghont the length and breadth of the word. His father entered timidly upon that career. He (Lomd brassey) hat often heard him describe the day whicle led him to the execation of pmblic works. At the the when the Liverpol and Manchester lailway-our first ralway-was in contemplation, whl fieore Stephenson came to see his father, then a foung man, hought mp as a surveror and carrying on his business in birkenhead, with reference to the purchase of some stone. His father conducted Mr. Stephensm to the quarry. The innression made mpon Mr. Stephenson by his father was most farommble, and when he show hands with him in the evening he said, 'Well, formg man, there is something promising abont you. I see a great tield for railways. It would be well for you to follow my bannr and enter mon this new sphere of enterprise.' The pomis man trembled at the idea, but he took the advice, tendered for a portion of the Liverpool railway, and dming the construction of the first ten miles of that ralway their suest was borm. He wonld not enter into the details of his father"s career, but he lad often asked himself what was the secret of his snccess. He hoped he was not exaggerating his father's praise when he said that he believed his snccess was mainly due to his higll and honest character; and if he might make one more reference to his fither le world say this, that the motive which prompted him to extend his enternise to the great limits which it ultimately reached was not primarily a love of momer-it was the spirit of enterprise, and the ambition to be a constructor of sreat and nolle works. The results which hat followed from his labours were patent to all the word. They had dome mach to promote the prosperity of mankind. He (Lord Brassey) dil not know that we could find greater eridence of the benefits of the railway syatem than here. These colomes could not expect prosperity withont ralways. The inheritance which devolved umon him ats the son of his father had inuressed upon him a heary weight of respunsibility; and he did most devontly wish to turn to grood accom the oprortmities that had been given to him. With this desire he had paid a visit to the shores of New Sonth Wales. Every traveller who cane from the old comotry and made fiends with those living here was another link between the old country and the new. It rejoiced his heart to see so many evidences of the wam feeling of affection towards the old comntry, that dear mother land whose prite in and attachment to the colonies was growing stroncer every year. We hat seen freat events happen during his short political career. We had seen Gernany becume a mited nation, we had seen 1 taly lrecome a united
nation, and if the English-speaking ant England-loving people intended to mantain their influence in the world, they must keep together (cheers); an united empire with local self-government was a happy solution of a great political problen. It had been rendered pussible by that instinctive feeling of race which bound us all, and in that greatest gift in the science of politics --the common sense which was so eminently characteristic of the british race. He thanked them for their great limelness in receiving him on that occasion. Neither he nor his would ever forget that kintness.

At the conchasion of the speeches cheers were given for Lord ant Lady Drassey.

The 'General Gordon' retumed to Peat's Ferry late in the aftemoon, the excursion having been a most enjoyable one, and the party reached lienfern carly in the evening.

[^0]:    Scorn no man＇s tore，thongh of a mean tegree：
    Love is a present for a mighty King．

[^1]:    Black Boys

[^2]:    ' See Appendix.

[^3]:    ${ }^{1}$ See Appendix.

[^4]:    ${ }^{1}$ The temporary failure of the chart lamp was the real cause of this alarm. The coast sheets for Northern Queensland are on a very small scale, and it requires a strong light and young eyes to read their figures and the infinitesimally small signs denoting rocks.
